"The thing that will bring results here," he said, "is a great and dangerous development of unemployment in this country. Nothing else is likely to do it. I have introduced two bills—one for temporary measures for employment, another for a permanent housing plan. I am going to offer a third bill, creating an Industrial Commission. But these measures will not get serious attention from this Congress."

The Seattle strike had a curious effect upon the members of the House and Senate who are "seeing things at night" in an industrial sense. They had visions of a great outbreak of working people, possibly with bomb and torch and knife. They anxiously waited to learn that most of the Seattle labor leaders were Russian anarchists. They suddenly discovered that Mayor Hanson of Seattle was a hero, fit to be President, when he bade defiance to the peaceful strike and called for the troops, and still more when he called for criminal prosecution of men who led the strike.

These frightened statesmen experienced something of a jolt, yesterday, when it was discovered that their latest remedy for labor unrest in America—the wholesale deportation of "foreign radicals"—was to be answered by the British government, which stands ready to ship back here a few hundred of American "agitators." It appears that a great many I. W. W. have drifted across the ocean in the past few years, and have been working and agitating in Britain or in South Africa or Australia during the war. Strikes have taken place. The authorities take the same line as do our conservative gentlemen in Congress. They want these "dangerous Americans" sent home to the United States. And even a Mormon Senator can understand that the more you ship a labor agitator around the earth, the more of a hearing he is bound to get for his complaints against industrial conditions.

"We don't want to stir up much noise about these trainloads of aliens we are going to deport," Senator King of Utah is reported to have said the other day, "because men such as Senator Johnson of California might make a kick, and might prevent the passage of the Burnett bill."

This Burnett bill is the one which requires the deportation and exclusion of alien enemies who have been interned. It yields up large numbers of men who are actually political refugees, to punishment by foreign governments. It repeals the historic American right of political refuge in America.

There are men in labor offices in Washington who believe that it would be a fine thing, from an educational standpoint, if all the foreign-born labor agitators in the United States were sent home to the countries from which they came, and that all exiled American labor agitators should return. Then the bugaboo of "foreign propaganda" would at least be exploded. Unemployment, high cost of food, long hours, child labor, the lack of a minimum wage scale—all these and other issues would have to be met as strictly American grievances. Of course no such showdown will be had.

Senator Thomas of Colorado, whose chief occupaton this winter has been the denunciation of labor measures and labor agitators, has discovered how "Bolsheviki" are made. He listened yesterday to the recital by General Ansell of the barbarous sentences given to hundreds of American soldiers by the so-called courts martial in our army during the war, and as the heartless cruelty of these courts was shown in case after case he declared "that boy's mother has probably joined the Bolsheviki," or "any system that will permit a thing like that is un-American; it will make Bolshevists out of all that man's relatives."

Thomas voted the other day against repealing the press-gag powers of the Postmaster-General.

As to the supposed "investigation" of Bolshevik propaganda, it has been limited thus far to bringing in a few persons who were in Russia on religious errands or consular work, and whose testimony has been in general very mild. But neither Raymond Robins nor Major Thatcher of the Red Cross, nor Albert Rhys Williams nor Santori Nuerteva, who are the chief sources of the information sent out in this country favorable to the workingmen's government in Russia have been permitted to testify. Chairman Overman of the subcommittee has declared that he does not intend to "give them any advertising."

But the main object of the publicity campaign has been attained: the Allied troops are going to be withdrawn from Northern Russia and Siberia as soon as possible. Arrangements to that end are to be made at the Princes Island's conference with the Soviet government. That fact was drawn from the chairman of the Senate Foreign Relations Committee, recently, by Senator Johnson, after Chairman Hitchcock had lined up the Democrats to prevent a vote on the Johnson resolution that called for withdrawal of the American troops.

"Now, we expect to get out," Hitchcock said. "The Senator can see that it is the policy of the President of the United States as soon as possible to bring those soldiers out of Russia. The Senator can see that the President has brought Great Britain and France and Italy to the point where all are to have a conference with those Russians on Princes Island; and I will predict now that one of the first conditions agreed upon at that conference will be the cessation of hostilities, and another result will be the retirement from Russia not of the United States alone but of all nations that went with us into Russia. When they come out they will come out as they went in—together."

So the workingmen's government of Russia is at last to be safe from counter-revolution or invasion. That is all that has been asked by the labor movements of France and Italy and Great Britain. It is all that has been asked or wanted by the hundreds of labor bodies in this country who have endorsed Senator Johnson's fight. Organized labor throughout the world has demanded merely a square deal for Russian labor—the chance to try its hand at government, just as the employers and slaveholders have always had a chance to try their hand.

And now American labor can go at its own problems with a renewed enthusiasm. Soviet government is not wanted in America, because we have a better system of popular rule, all ready and waiting to be tried. The Labor Party movement and the Nonpartisan League movement among the farmers give promise of a trial of the fine possibilities of our American government next year or very soon thereafter. When a Labor-Farmer majority is sent to Congress; and in the cabinet there sit men who build up, and who do not try to destroy, the organizations of the postal workers and the telephone and telegraph employes; when the Department of Agriculture is run by a Secretary as much opposed to the Rockefeller interests as Mr. Houston is friendly to those interests; and when the economic and political program of the Labor Party becomes the program of a national administration, we shall be on the road to find out how well we can manage with the form of government we have developed in America. Every anti-labor Senator and editor knows that it is not a different form of government that the "agitators" want: it is a different policy, a human-welfare policy, that is demanded.

The Democrats go out. A Republican Congress comes in. The President comes home with the League of Nations as the trophy of his victory in Paris. The Berne conference of labor and Socialist forces of Europe has dictated the labor program adopted at Paris. The old governmental aristocrats are applying sabotage to this labor program. The President comes to sign a few bills and to attend a conference on unemployment right here in the United States.

If the Republican Congress does not change all its spots in the next few months, it is going to prove itself as incapable of solving the "labor problem" as the Democratic Congress has been.

And that opens the door to a hearing for the program and the political campaigns of the Labor Party.

The factory child, denied the right to learn to play, is the progenitor of the man who can do no more than toy with the most serious affairs.

The attempt to justify child labor by pleading the "laziness of the parents" is insult added to subterfuge.

BURNING OF THE "ARYAN."

Details of the burning of the American ship "Aryan," which was abandoned 300 miles east of Chatham Islands on Christmas eve, have been received.

The "Aryan" was built at Phippsburg, Me., in 1893; she was of 2123 gross tonnage, and 1939 net.

The vessel left Wellington, N. Z., on Dec. 18 with a full cargo for San Francisco, comprising pelts, tallow, flax, etc. Everything proceeded well until a quarter to two on the morning of December 24, when Mr Graham, the mate, who was on watch at the time, noticed volumes of smoke issuing from the ventilators over the poop. A moderate sea was running, but there was not a great deal of wind. All hands were immediately called on deck, and the pumps were manned. The fire was located in the main hold, and holes were cut in the deck through which hoses were run to play on the flames. Both hand and steam pumps were set going at full pressure, and great volumes of water were poured on to the seat of the fire. For about nine hours the crew fought valiantly against the outbreak, but all their efforts were without avail, and the flames spread rapidly in all directions.

Nevertheless, well knowing their peril, all hands worked and toiled to try to bring the fire into subjection, but the flames became masters of the situation; the sails and rigging caught alight, and it became apparent that nothing further could be done but to abandon the ship. By this time, the hatches had fallen in and the "Aryan" was little more than a shell of raging and roaring flames. The tallow and flax burned fiercely, and tongues of strident flame shot high into the air. Smoke was belching forth from every quarter, and the heat became unbearable. About 11:30 Captain Larsen decided that it was no use remaining on board any longer, and accordingly he issued orders that the ship should be abandoned. Three boats were launched and only ten minutes after the boats had left the ship, the "Aryan's" masts, about the spars of which the flames leaped and danced wickedly, fell overboard with a mighty, resounding crash, and broke into great fragments. The outlines of the ship could scarcely be seen now owing to the density of the smoke and flames. However, the boats stood by until 4 p. m., when Captain Larsen instructed them to hoist sail and set a course for the Chathams, which lay some 300 miles to the westward. The "Aryan" was then in approximately latitude 45 south, longitude 171.10 west. The three boats kept pretty well together until dusk when the missing boat was last spoken. At 4 o'clock on Christmas morning, before the sun had risen, the glare of the doomed vessel could still be descried. It was estimated that she was then 87 to 90 miles away to the eastward. As the dawn paled into brightening day the reflection on the horizon disappeared. During the night the boats had separated a good deal, and in the morning the mate's boat was missing altogether. At the time no great anxiety was felt regarding her, for the mate had been fully instructed as to what course to steer. The second mate's boat wandered from the track also, but she was picked up by the captain's boat after an interval of about three hours. That night the wind blew up hard from the south and a nasty cross sea rose. The boats had a pretty severe handling, and it is possible that the mate's boat went down during the storm. The other two boats managed to keep in company fairly well for the remainder of the voyage, however, and at 11 p. m. on December 27 landed at Kaingaroa.

LOWER CALIFORNIA.

Governor Esteban Cantu, of Lower California, issued, early in February, a statement to "The People and Government of the United States," in which he protests against a continuation of the move to annex Lower California to this country. He justly and very correctly characterizes the move as "a conspiracy framed by some citizens of the United States to assail the integrity and freedom of a friendly nation," and says his protest is made necessary by "the widespread propaganda some business and political men are making in the United States."

It is a very dignified, straightforward statement that Governor Cantu makes, and it is a thoroughly manly appeal to American fairness, sense of justice and political decency. How much effect it will have we do not know. We remember—not without shame—the cynical, dollar-marked arguments advanced in American papers and even in the American Congress some twenty years ago for "criminal aggression"—disguised in Presidential language as "benevolent assimilation"—in the Philippines.

We remember that one of the most influential Republicans in the Senate—Thomas H. Carter, of Montana—said: "The only question is, Will it pay? If it can be shown that it will pay, and I believe it can, the American flag will never come down in the Philippines." Tom Carter has successors in the Senate today, and the only question with them, and with others equally without conscience outside of the Senate, in regard to annexation of Lower California is, Will it pay?

Governor Cantu says "the Mexicans would rather lose a part of their land through forceful and unjustified occupation than as a result of a preconcerted bargain," and he asserts that the League of the Southwest is carrying on the annexation propaganda in a manner that surpasses the limits of propriety. But when did land-grabbers ever concern themselves with propriety?

It isn't so many years since a stain was put upon our country's honor by the piracy of Panama. But that was before President Wilson journeyed to Europe to try to "make the world safe for democracy," and to make democracy safe for small and weak as well as for great and powerful peoples. It wouldn't look quite right for our country to violate the autonomy of Mexico while safeguarding that of Serbia. Our State Department has recently disclaimed any endorsement of the plan for annexing Lower California and part of Sonora, but that will not put an end to the propaganda of the Land Grabbers' League.—The San Francisco Star.

It is inevitable that the man who works at night should think only in the dark.

THE BUILDING PROGRAM.

The cessation in the building line during the war has left a gap to be filled up from now on, which promises to be of some proportions from the reports that are being published from time to time for this country, England and the devastated parts of Europe.

Road building in this country has some ambitious estimates in a report just issued by the Department of Agriculture. The estimate given for this year's expenditure amounts to $300,000,000. Home building and estimates for the government and private enterprises run up into the hundreds of millions.

In England the British Housing Committee have a program which will build a half a million homes for workingmen. The program is to cover a period of five years, building 100,000 houses each year. Many of the ancient parts of London are to be replaced by the most modern ideas of home building. In addition to this public and private buildings are to be erected. This will help to take the slack out of the out-of-work line that seems to be in the immediate prospect from the return of the soldiers to civilian life.

The shorter workday is the most important question before the labor movement, and will continue to be such, because it is the simplest and most direct way of adjusting the problem of distribution.

Labor's Economic Platform

Following is the Economic Platform adopted by the American Federation of Labor:

1. The abolition of all forms of involuntary servitude, except as a punishment for crime.
2. Free schools, free text books and compulsory education.
3. Unrelenting protest against the issuance and abuse of injunction process in labor disputes.
4. A work day of not more than eight hours in the twenty-four hour day.
5. A strict recognition of not over eight hours per day on all Federal, State or municipal work, and not less than the prevailing per diem wage rate of the class of employment in the vicinity where the work is performed.
6. Release from employment one day in seven.
7. The abolition of the contract system on public work.
8. The municipal ownership of public utilities.
9. The abolition of the sweat-shop system.
10. Sanitary inspection of factory, workshop, mine and home.
11. Liability of employers for injury to body or loss of life.
12. The nationalization of telegraph and telephone.
13. The passage of anti-child labor laws in States where they do not exist and rigid defense of them where they have been enacted into law.
14. Woman suffrage co-equal with man-suffrage.
15. Suitable and plentiful playgrounds for children in all cities.
16. The Initiative and Referendum and the Imperative Mandate and Right of Recall.
17. Continued agitation for the public bath system in all cities.
18. Qualification in permits to build of all cities and towns, that there shall be bathrooms and bathroom attachments in all houses or compartments used for habitation.
19. We favor a system of finance whereby money shall be issued exclusively by the Government, with such regulations and restrictions as will protect it from manipulation by the banking interests for their own private gain.

RE-TRAINING THE CRIPPLED.

(By Douglas C. McMurtrie*)

In the past, our method of dealing with men permanently disabled in the course of employment has been to pay the worker a pension in the form of compensation, and forget him and his injury. But the cost of disability in the field of labor has not been alone in the premium paid for casualty insurance. There has been the cost involved in the training experience, and adaptation of a skilled worker who does not return to his job, and the fitting of a newcomer to take his place.

There are three means of reducing and approaching the complete elimination of the cost of disability: first, accident prevention; second, thorough medical attention to minimize the disability resulting from the injury, and third, salvage of the remaining abilities of the worker through rehabilitation for self-support. The first of these has already received wide attention from employers and has wisely been encouraged in a financial way by casualty insurance companies and State funds. The values of the two latter have, however, not as yet been appreciated. Their energetic application would effect a tremendous saving to industry.

Many injuries from which men would completely recover in a short time under adequate and high-grade medical attention are treated for an insufficient time, or by incompetent physicians and, instead of a prompt return to work, the case at best drags along over an extended period and at worst becomes chronic or develops into permanent disability. Some States require the insurance carrier to provide but two weeks of compulsory free medical attention to the injured man. For the insurance company to take advantage of this limitation is the most short-sighted policy possible, because for every dollar saved in physicians' or hospital fees, the insurance carrier pays out later ten dollars in compensation. And what the insurance company pays is actually paid by the insuring employers in their regular premiums.

Unlimited medical attention of the highest grade should be an axiom of casualty practice. It should be insisted upon by employer and workman alike. The best outcome of any injury is to have the employee return to his job as a well man in the shortest possible time. It is well to develop a science of dealing with cripples, but the ideal is to have fewer and fewer cripples with which to deal.

The third method of attack on the cost of disability is rehabilitation for self-support—the re-education of an injured man for an occupation which he can follow, or a process which he can perform, in spite of his handicap. The science of rehabilitation is new, and the experience in it has practically all been gained in the effort to make sound and just provision for the disabled soldier or sailor. Every country among the recent belligerents is to-day operating a comprehensive system of re-education for disabled soldiers, and is placing upon that system more dependence than upon the pension system.

Paying a man a small monthly or weekly stipend on which he is expected to live in idleness is not a very constructive method. With the breakdown of confidence in the pension system, it was realized that the only real compensation for disablement was restoration of capacity for self-support. It was further realized that very few jobs require all the physical faculties and that in the present-day variety of industrial processes, it is possible to find a job in which a man with a given type of disability can function 100 per cent efficient. Some jobs are standing, some seated, others require walking about, some jobs at a bench working on small articles require but little strength, others involve great physical exertion. Still others do not require the sense of hearing, in others the sense of sight is not essential. Finding the future work of the disabled man, therefore, requires expert and painstaking choice, but a successful selection is possible even for the seriously handicapped. The first aim is to place the man back in a different job in his own trade or in a trade closely related. In such a job his past experience will stand him in good stead. Failing this, he can be re-trained for a different line.

The process of re-training the disabled is known as re-education, and can best be provided in a special school for crippled men. The first school of this kind in the United States is the Red Cross Institute for Crippled and Disabled Men, established in New York City through the generosity of Jeremiah Milbank. At this school, open to disabled civilians and soldiers alike, six trades are already being taught: artificial limb making, motion picture operating, oxy-acetylene welding, printing, jewelry work, and mechanical drafting. More will be added as the demand develops. Graduates are already giving satisfaction in the jobs to which they have been graduated, so the enterprise has passed the experimental stage. And in the results attained with disabled soldiers abroad there is overwhelming evidence of the logic and practicality of rehabilitation.

The cost of soldier rehabilitation is being met by the United States Government and by the governments of some of our allies. It will be admitted without argument as desirable that the advantages of re-education be made available to disabled civilians as well, but will not the cost be prohibitive? The fact is that rehabilitation effects a reduction rather than an increase in the cost of disability to industry or to the community as a whole.

A typical case will illustrate how the saving is effected. A worker in Massachusetts was injured by a fall while working inside a submarine and his hand became permanently crippled. In due course his compensation rate was determined and he was referred to the insurance carrier to be paid ten dollars a week for a long period, with a maximum total payment of four thousand dollars. Since the disability was manifestly permanent the insurance company wrote the case off their books as a four thousand dollar loss and transferred that amount to reserve to cover the weekly payments. After the compensation had been paid for nearly a year, a new official of the insurance company began looking over the list of men to whom the company was paying compensation. His attention was directed to the man in question and the latter was requested to call at the office of the company. The case was like many thousands of others susceptible of rehabilitation for self-support, so the insurance company official put a proposition to the man in very frank terms. "I believe that you can be trained to earn a good living. I want you to understand very clearly, however, that this proposal is to the financial advantage of the company, but I also believe it is to your advantage as well. A total income of ten dollars a week is not very attractive to you and you would probably rather return to work at a good wage than remain idle. If you will consent, the company will send you to a school of re-education and see if we cannot get you back on your feet in good shape."

The injured man consented to the proposal and the company sent him to the Red Cross Institute in New York. They began to pay him not ten dollars a week as required by law, but forty dollars a week, twenty to him in New York and twenty to his wife at home. The company also paid liberally his traveling expenses in both directions. In the period of eight weeks he was re-educated in oxy-acetylene cutting and welding and returned home. He is now making not only a satisfactory wage, but twice as much as he had ever earned before the accident took place.

In the whole transaction every party at interest was benefited. The man was advantaged in that his general living standard was distinctly raised, and the necessity of working for his living could not be considered as a hardship. The company paid less than five hundred dollars for his rehabilitation and this expense in conjunction with the five hundred dollars already paid in weekly compensation during the first year of idleness made a total for the case of one thousand dollars. They was thus enabled to charge three thousand dollars of profit to the account of profit and loss. The community was infinitely the gainer in that the man, formerly an unproductive consumer, became a useful producer instead. The community further gained in the elimination of the disabled man from the category of a prospective dependent, because while compensation might have taken care of him in a very insufficient way during the period of idleness, there would have come a time when compensation ceased and then he would have been in a desperate economic status indeed—confirmed in habits of idleness, untrained for skilled work, and without any source of support.

A more intelligent handling of disability by insurance carriers will, therefore, reduce their expense, and will thus cut the cost of casualty protection to the employer. There is needed also, however, some revision of compensation laws so that there may be definite encouragement to insurance carriers to offer opportunity of rehabilitation and definite encouragement to the disabled men to take advantage of it. Practically every compensation case that has ever come to the Red Cross Institute has come on the day his compensation expired. For one year, for two years, or for four years the man has existed in idleness, drawing compensation, and cultivating habits of indolence. When his support was cut off, he then became interested in re-habilitation. Present compensation legislation tends to encourage the man to remain idle because his payments are reduced by any improvement in earning capacity. A revision of this practice will make for more constructive provision.

In short, the first effort should be to prevent injury, the second to minimize its per-

*Director, Red Cross Institute for Crippled and Disabled Men, Twenty-third Street and Broadway, New York City.

manent effects, the third—when disability has ensued—to offset its economic consequences. The execution of this complete program is not only sound humanitarian practice—it is good business as well.

SEAMEN'S RIGHTS IN HAWAII.

(Continued from Page 7.)

of all his witnesses taken at any time after service of process. He did not see fit to do so. That was a matter for him. The steamship put into this port for the purpose of taking on coal and for repairs, which coal was furnished by that highly patriotic corporation, the Inter-Island Steam Navigation Company, Limited. The repairs were not completed until about two days before the vessel sailed, and all the statements about the vessel being held up are wholly groundless. In the case against the S. S. "Oakwood," process in rem was not issued against the steamship but an order to show cause was obtained and the master was simply required to show cause why process should not be issued, and after hearing the court refused to issue process and the libel is still on file. It is impossible for counsel upon the ex parte statement of seamen to ascertain whether or not they will succeed in the suit and the only way to find out is by a hearing in court, which hearing is provided for by act of the United States Congress. Let me add that I have never solicited this kind of business or engaged any person or persons to bring this business to my office, and whatever reputation I may have as an humble member of the bar as an admiralty practitioner has been gained by close application and fair dealing with all seamen by whom I have been engaged and I feel that I need make no apology for pursuing my high calling and in taking the cases of poor and friendless seamen who come into this port and are entitled to the protection of our laws and of our flag. It may be that some rich and patriotic lawyer who has amassed a fortune in fees obtained from corporations and the wealthy may abandon his practice and without fee or reward attend to all litigation for seamen free of charge. This no doubt would be highly gratifying and worth while, but who is there to do it, and even if such a person should exist who is willing to do this, the seamen may not be willing to ask for his services or to retain him.

So long as the United States courts exist and there are men who go down to the sea in ships and do their business in great waters and while ships are manned by sailors there is bound to be disputes and litigation and as involuntary servitude except as a punishment for crime is prohibited by the United States Constitution, Congress will not again revive the barbarous and unjust laws against seamen. Judge Dole in the case of Mahoney vs. "The Brenda," 2 U. S. District Court Reports, 410, said:

"The British shipping act being harsh in its provisions toward seamen and creating a servile condition should be liberally construed in favor of seamen."

Congress has abolished corporal punishment and arrest for desertion and no doubt are endeavoring to place seamen upon the same footing as any other honest laborer of the Republic, and it is a monstrous proposition to say that seamen shall not have process in rem against a vessel whose owners are thousands of miles away. There is no other remedy except to bring the proceedings in rem, process cannot be served upon the owners and it is useless to sue the master, and Congress therefore passed the act of July 1, 1916, the provisions of which are quoted above. It is unnecessary to say that the United States courts will in no way be influenced by the publication of such sensational articles and editorials as have lately appeared in the two dailies in Honolulu, and whoever inspired these articles did so without knowing what he was talking about. The statements contained in these articles so far as they refer to any litigation on behalf of seamen in which I was proctor or in which I am now engaged are absolutely false and untrue and the fullest investigation will disclose and corroborate the statements herein contained. These newspapers cannot prevent seamen from having their day in court, nor of availing themselves of the provisions of the act of Congress of July 1, 1916, herein referred to, and the Constitution of the United States has granted jurisdiction to the United States courts by Article III, Section 2, over all cases of admiralty and maritime jurisdiction, and this cannot be taken away even by Congress itself.

The Supreme Court of the United States by a decision filed on May 21, 1917, in the case of the Southern Pacific Company vs. Jensen has left no room for doubt that no interference with this grant of power and jurisdiction will be tolerated and it declared the Workmen's Compensation Act of the State of New York in so far as it interfered with the grant of power and jurisdiction given by the Constitution to be unconstitutional. Seamen have the same rights as any other people to engage any counsel they may select and all counsel have got to do is to act honorably and uprightly, and the younger members of the profession who want to follow this branch of the law so long as they get clean business and deal honorably with seamen and pursue a straight course need have no fear of the result. It is a clean, straight and honorable thing for any lawyer to endeavor to enforce the provisions of the act of Congress of July 1, 1916. No further attention will be paid by me to any articles or editorials that shall hereafter appear in these newspapers and the conduct of my business will be regulated by myself under the supervision of the courts having jurisdiction.

GEO. A. DAVIS.

Dated Honolulu, Hawaii, Jan. 27, 1919.

A REAL HEALTH ALMANAC.

One of the almanacs of the sixteenth century bore the following title:

"Pronostycacyon of Mayster John Thybault, medycyner and astronomer of the Emperyall Majestie, of the year of Our Lorde God MCCCCCXXXIJ., comprehending the iij partes of this yere, and of the influence of the mone, of peas and warre, and of the sykenesses of this yere, with the constellacions of them that be under the vij planettes, and the revolucions of Kynges and princes, and of the eclipses and comets."

We are still prognosticating on the subjects of "peas and warre, and the revolucions of Kynges and princes," but the United States Public Health Service in its Health Almanac for 1919 is not content with chronicling our various ills, but preaches prevention of the "sykenesses of this yere."

In addition to the monthly calendar of health hints and notable events, this almanac discusses such topics as the following:

Control and prevention of infectious diseases, as pneumonia, common colds, tuberculosis, infantile paralysis, typhoid fever, smallpox, trachoma, hookworm disease, and venereal diseases.

Disposal of Human Excreta.

Importance of Clean Drinking Water.

Care of the Teeth.

Care of Milk in the Home.

What the U. S. Public Health Service is doing to protect the health of the people of the United States.

Copies of the 1919 almanac may be obtained free upon application to the U. S. Public Health Bureau, No. 3 B Street, S. E., Washington, D. C.

Australia and New Zealand may soon own the most valuable phosphate deposits in the world if a movement that has been started with this end in view is favored by the British Government. These deposits were formerly owned by Germany, but were taken over by Great Britain following the outbreak of the war. They are located on Nauru (Pleasant) Island and Ocean Island, which, in turn, are located about half-way between the Marshall and Solomon Islands, northwest of New Zealand. In a report to the Department of Commerce, Consul-General A. A. Winslow, who is at Auckland, says of them: "The islands, of coral formation, have for ages been the rookeries of sea birds, which have deposited guano that has impregnated the limestone, forming phosphate rock forty feet in depth. The quantity of phosphate available is estimated at 500,000,000 tons, and as fertilizer is said to rival the famous nitrate fields of Chile. This phosphate possesses 85 per cent. of manurial value, as against about 27 per cent. for the best English phosphate."

Labor News

A conference of all persons and organizations interested in negro labor problems was held at Washington by the Department of Labor on February 17 and 18.

Investigators for the Department of Labor find that in nearly a third of all industrial plants inspected in Indiana women are employed more than ten hours without overtime. Only ten per cent. have an eight-hour day.

The United States Steel and Carnegie Pension Fund paid out $709,-059.82 to retired workers during 1918, who numbered 2,861. During the eight years the Fund has been in existence the amount paid out amounts to $4,367,107.55.

In copper mining circles there has been considerable agitation looking to a general reduction of the prices of labor. Big business is looking to the reduction of wages among copper workers to set the example for similar reductions in other branches of industry.

Federal Judge Dyer of St. Louis, Mo., has ordered that 300 employees of the Missouri Plate Glass Company be paid $13,000 back wages. The firm went into bankruptcy because of debts aggregating $285,000, and Judge Dyer held that the workers have a preferred claim.

A survey by the Women in Industry Service of the Department of Labor in Indiana indicates that the ten-hour day without overtime is the rule in more than one-third of the plants. Only 10 per cent. of all the establishments have the eight-hour day. Working weeks as long as eighty-eight hours were found.

A bill to establish the State Cossacks in Illinois has been introduced in the Legislature. Officers of the State Federation of Labor have called upon trade unionists to protest to their representatives. Attention is called to this section of the proposed law on the duties of Cossacks: "To arrest, without warrant, any person they may have reasonable cause to believe has committed an offense." Under this section there is no limit to the number of striking workers that the Cossacks may jail.

Efforts at accident prevention have reduced death one-half and minor injury two-thirds in the iron and steel industry in the last ten years, according to Bulletin No. 234 of the United States Bureau of Labor Statistics. In 1907, of every 1000 men employed in that industry 242 were were killed or injured. In 1917 the proportion had been reduced to 81 per thousand. The proportion undoubtedly would have been much lower in the later years, says the bulletin, but for the introduction of new labor and the great movement of labor during the war.

The National Committee for Organizing Iron and Steel Workers reports remarkable progress in unionizing the industries concerned. After years of failure in working on separate lines, the American Federation of Labor adopted the principle of united effort. The twenty-four most important crafts among iron and steel workers are now combined. They have a membership of over 1,500,000. It provides a sphere of action for every worker, "regardless of color, sex, or occupation." Many great plants, both East and West, have been thoroughly unionized, and many of the secondary centers of the industry are falling into line.

You Want the Truth

This year there will be stirring times in the Nation. Under government censorship it is increasingly difficult for the average man to get the real meaning of the social and political movements of the day.

LA FOLLETTE'S MAGAZINE

will be specially represented at Washington and will analyze and present the news from the capital truthfully and fairly. Senator La Follette is making a real fight to lift some of the tax burdens from the common people and place them where they belong — on excess profits, war profits and surplus fortunes and incomes. Because of this he is being attacked more bitterly than any other man in public life.

Send in your order today.

INFORMATION WANTED.

The salvage case of S. S. "Princeton" which salvaged the S. S. "Ardmore," both vessels owned by Standard Oil Company of New Jersey, has been tried and resulted in an award of $7,500 to the crew. This amount has been received, and members of the crew of S. S. "Princeton" are requested to call for same at the offices of Mr. Axtell, One Broadway, New York, N. Y.

INFORMATION WANTED.

For the benefit of the widow of John Karus, lost at sea, October 17, 1918, at 2:15 a. m., according to the report in the official log of the barkentine "Aurora," will all members of the crew of that vessel who know anything about the ship, the condition of her rigging, before and after the accident, or anything that will tend to explain his disappearance, communicate with the undersigned attorney for the widow?—Silas Blake Axtell, No. 1 Broadway, New York City. 1-1-19

Ellis R. Nelson, last heard from at New Orleans, La., Nov., 1916, when on board U. S. C. G. S. S. "Davy," is inquired for by his mother. Anyone knowing his whereabouts will kindly communicate with R. J. Nelson, 59 Clay St., San Francisco, Cal. 11-6-18

WEALTH!!!

Is the chief factor of wealth really gold—or its equivalent?

Can gold—much gold, or its equivalent, make anyone happy?

Can gold buy everything? CAN gold supply the indispensable necessities of the human being?

Can gold buy love—happiness, and last of all, health?

NO!!!

What good could all the gold in this world bring to the man who is failing in health?

What good could all the gold in this world do for the man or the woman who is yearning for love—for happiness—for the laughter of a bambino?

What good could all the gold in this world do for a drowning person, for one who is dying, for one who has lost his youth prematurely—for the woman who has lost her charms?

The chief factor of wealth is Health! Without health no one can enjoy earthly riches.

Fabulous sums in gold poured in front of a dying miser, whose entire life has been devoted to one ideal—to the hoarding of the glittering metal—could not produce even a faint smile.

What good could the riches of Croesus do for the man who is aware of the fact that tuberculosis is accelerating his death?

It is said of a very rich and famous millionaire—that while suffering from stomach trouble he exclaimed—"All my millions to Hades if I could only eat a cheese sandwich!" Of course he did not put it as mildly.

What good can his millions do for this particular man?

MEN--WOMEN--HEALTHY SUFFERERS--READ:

Your health is your chief asset. Do not underestimate its value, because you have received it from Mother Nature—and because it did not cost you anything.

If you are healthy—be sure that you do not neglect your stomach, and that your bowel movement is regular.

When your stomach is not performing its functions properly, the food goes through your intestinal tract undigested—the result is a poor blood supply—without blood you cannot live.

When your bowels move irregularly, or only when forced, the intestinal tract is clogged, and you are subject to all kinds of maladies imaginable. Your system becomes filled with poisons. The elimination of these poisons is a difficult task. Your head aches, you have hollow rings around your eyes, do not sleep well, worry, have not the smallest amount of energy or ambition—the most trivial matters iritate.

Then it is your duty to help Mother Nature perform her work by using the most renowned stomach cleanser and bowel regulator—LAXCARIN.

LAXCARIN is made of pure herbs. Nothing secret about its formula. Not a bit harmful. This preparation has been used by the most eminent physicians for years.

LAXCARIN is not only a Laxative, but it is a blood purifier as well. Also it builds up the intestinal tract and helps it to perform its functions. LAXCARIN drives the poisons out of your system. There is nothing better.

If you are suffering—try it today.

If you are healthy—send for it today—you can never tell when it may be needed.

Remember—Wealth is not everything—Health above everything.

LAXCARIN is sold only by the Laxcarin Products Co., Pittsburgh, Pa., Dept. E-99. Price per box, $1.00; 6 boxes $5.00. Will be sent upon receipt of remittance, postpaid anywhere.

MANUFACTURER'S NOTE—Laxcarin is not a secret remedy, but one which is well known and is prescribed and recommended by physicians for a long number of years. Unlike other preparations of this nature, it does not gripe the bowels or in any way cause any unnecessary suffering. It does the work gently, and the most satisfactory results are obtained by those who use it.

Sold Exclusively By The
LAXCARIN PRODUCTS CO.
PRICE—$1.00 per Box; 6 Boxes, $5.00.
Money Orders, Cash or Registered Letters.
Will Send C. O. D. anywhere.
Dept. No. E-99 Pittsburgh, Pa.

Home News

Armour & Co. in their annual report for the year ended November 2, 1918, show a net income of $15,247,837, as compared with $21,293,563 in 1917, and $20,100,000 in 1916. Gross income after deducting all charges. The company's surplus is shown in the report to be $69,366,799, as compared with $56,126,680 in the year previous.

A Federal department of education with a secretary who shall be a member of the Cabinet is the principal educational need in the United States, in the opinion of President P. L. Campbell, of the University of Oregon. A bill providing for such a department has been introduced by Senator Hoke Smith of Georgia.

The rumor was circulated that $15,000,000,000 had been returned to the Treasury as a result of the armistice, and that another Liberty Loan was therefore unnecessary. This wild story was effectively denied by Secretary of the Treasury Carter Glass, who said that, as matter of fact, the Government had been forced to borrow between four and five billion dollars.

The House Committee on Post Offices and Post Roads has voted to return the telephone and telegraph systems to their owners on December 31, 1919. This is taken as a notification that the Republican members are set against the idea of public ownership. Some of them are reported as rejoicing that the vote showed that "the Administration was licked to a frazzle."

Robert W. Woolley, Interstate Commerce Commissioner, speaking at the University Club in Buffalo went even further than Mr. Adoo in his endorsement of Federal ownership of the railroads. He declared that the taking over of the railroads averted a disaster and the conduct of the roads in the months of the war proved the practicability and wisdom of Government ownership.

Following the receipt of a vigorous message from the President, the House and Naval Affairs Committee unanimously reported the bill for a three-year naval program, involving an expenditure of $600,000,000. The construction of the ships is not to begin until February 1, 1920, and it is provided that the program may be suspended if a competent instrumentality for international peace is set up in the meantime.

Senator Harry New of Indiana has introduced a bill in the Senate for universal military training. Under the bill all youths on reaching the age of eighteen years are to be subject to training for a continuous period of not more than one year. Senator New said his bill was merely a "nucleus," and he asked advice from the Military Affairs Committee and the General Staff. He said he did not expect it to be passed by the present session of Congress.

Approximately one-tenth of the population of the United States is composed of unnaturalized aliens, according to Raymond F. Crist, Deputy Commissioner of Naturalization, who said that such a condition would not be permitted by any other country and appealed to American citizens to help in making citizens of alien residents. He said there were 10,500,000 aliens in this country who still retain their allegiance to the land of their birth.

Domestic and Naval

The steamship "Binghamton," 2143 tons gross, 1549 net, built at Buffalo in 1882, and owned by the Atlantic & Pacific Coast S. S. Co., New York, and the steamship "St. Paul," 2029 tons gross, 1222 net, built at Chicago in 1897 and owned by the United States Steamship Company, New York, have been sold to the American S. S. Co., New York.

Eight Japanese, enlisted men in the United States Navy, were naturalized on February 19 in the Federal Court at Philadelphia, thus complying for the first time in that city with the law of May 9, 1918, providing all men in the service may become citizens. In admitting the Japanese to citizenship, Judge Thompson said: "Any man who is good enough to fight for this country is good enough to be one of its citizens."

The Bureau of Navigation, Department of Commerce, has issued a statement showing that seagoing American merchant ships of 1000 tons or over on January 1 comprised 1633 vessels of 5,656,856 gross tons, of which 1344 of 5,138,644 gross tons were steamers and 319 of 518,192 gross tons were sailing vessels. In addition, the War and Navy Departments are operating former merchant ships numbering 55 of 396,829 gross tons.

Announcement is made by the United States Steamship Company that while the income from its subsidiaries in the past six months was $2,204,753, or almost six times the usual bi-monthly dividend requirement at the rate of 1 per cent. regular and ½ per cent extra, the uncertainties of the steamship and shipbuilding situation have decided the directors to defer action on the dividends to the next meeting of the directors. Normally the next dividends would have been paid on March 1.

Chairman Hurley of the Shipping Board announced during the week that he had arranged with the United States Chamber of Commerce to get an expression of opinion from business, civic, industrial and labor organizations of the United States upon the policy that should be adopted by the Government toward the merchant marine. He said a series of questions would be telegraphed immediately to secure opinions on ship construction, Government or private ownership and operation and all other questions bearing on the situation.

A report of the United States Coast and Geodetic Survey states that the schooner "Matchless" was employed on a topographic revision and hydrographic resurvey of Hampton Roads during the month of January, 1919. Additional prominent objects and signals to control the hydrography and topography were located, and the topography was completed for a distance of four miles from Old Point Comfort along the north side of Hampton Roads. The hydrography done included a belt one and one-half miles wide across Hampton Roads, the completion of the hydrography of the Chesapeake Bay sheet in the approach to Hampton Roads, and a complete resurvey of the dumping ground between Willoughby Bank and Willoughby Spit. The plotting of the hydrographic sheets of the Chesapeake Bay work was also completed during the month.

Charles L. Carlsen, No. 1834, who disappeared from the barge "Isaac Reed" at Eureka, California, on December 31, 1918, is inquired for by his wife, Mrs. C. L. Carlsen, 107 Courtland Ave., San Francisco, Cal. 2-5-19

Frank J. Phillips, a member of the Marine Firemen's, Oilers' and Watertenders' Union of the Atlantic and Gulf, last heard of in San Francisco, Cal., April, 1916. Anyone knowing his whereabouts will please notify Mrs. Frank J. Phillips, P. O. Box 521, San Pedro, Cal. 2-19-19

News from Abroad

The Danish Cement Shipbuilding Company has decided to close down the new process and revert to wood and steel. The reason given by the directors is that cement shipbuilding is not profitable.

Canada is intent on the business of transforming "casualties" into farmers. Not only is she generous in allotments of land to her returned soldiers, but she trains them on farms and in agricultural colleges.

Three American meat packing companies have recently been established in Paraguay. One of the American meat packing companies has acquired extensive quebracho lands in northern Paraguay, on which an extract factory has been built.

According to the Hamburger Fremdenblatt for December 15, the following was the value of the coins turned out in German mints during the month of November: Silver 50 pfennig pieces, 1,269,328 marks; iron 5 pfennig pieces, 1,745,567 marks; zinc 10 pfennig pieces, 1,293,915 marks; aluminum 1 pfennig pieces, 1,785 marks.

At a special session of the New Zealand Parliament in October the Minister of Finance recommended that $4,866,500 be devoted to acquire lands for soldiers and $2,433,250 for assistance to soldiers on their return. Up to November 28 on an available acreage of 394,219 only 1000 out of a total of 25,000 returned men have been settled on farms.

It has been announced that the Forestry Department of the New Zealand Government will be allowed $729,975 for development work during the coming year, and it is proposed to outline a liberal policy along the line of reforestation, especially covering the question of white and Norway pines that are found so exceptionally useful in this part of the world.

The first of the four ferroconcrete ships to be built at Warrenpoint, Ireland, for the Ministry of Shipping has been launched. The vessel, which is named the "Cretefarm," is of 1000 tons dead-weight carrying capacity, about 200 feet in length, with a beam of about thirty-five feet and a draft of fifteen feet. The yard at which this ship was built was opened in February, 1918, and is the only one of its kind in Ireland. At present it employs 400 hands. The vessel is built on the Monchel-Hennebique monolithic system.

According to the most authentic information available, 181 steamers, each having a capacity of more than 1,000 tons deadweight, aggregating 1,189,295 tons, will be built at various leading shipbuilding yards in Japan in 1919. With peace restored, many small shipbuilding concerns which have been started at various different places in this country in such rapid succession since the war and which have no strong financial backing are destined to disappear soon. On the other hand, such large corporations as the Kawasaki Dock Co., of Kobe, the Mitsubishi Shipbuilding Co., both at Nagasaki and Kobe, the Asano Shipbuilding Co., of Yokohama, the Uraga Dock Co., and several others, all representative in the shipbuilding world of this country, are now contemplating expansion on a large scale for the post-bellum trade.

With the Wits

He—I want to get married. Do you think I will?

She—Don't ask me.—Judge.

"What an air of well-bred repose young Newrich has!" "Yes, but he was naturally lazy to begin with."—Boston Transcript.

"Why do you drop so many pennies in that slot machine?" "Oh, I like to patronize a proposition that hasn't raised its price."—Kansas City Journal.

Sue—Wouldn't you like to be as happy as a lark?

Prue—No, indeed. Think of the time they have to get up.—Marine Herald.

Son (reading the paper)—There's no use talking dad. Absolute unity of command is essential to victory.

Dad—That's what your mother thinks.—Life

Barber (about through with hair cut)—Does that suit you, sir?

Absent-minded Professor—You've cut it altogether too short—a little longer, please.—Boston Transcript.

Tommie (in the trenches)—Done much traveling in your day, Yank?

Yankee—Quite some.

Tommie—Ever been to Berlin?

Yankee—Not yet.—Yonkers Statesman.

The Khaki Gentleman—Do you love me, darling?

She—Yes, Jack, dear.

The Khaki Gentleman—Jack! My name's Harold!

She (who has numerous admirers—one for each day of the week)—Oh, yes, of course. I keep thinking this is Saturday.—Tit-Bits.

Her Father—And so you want to marry my daughter?

Young Man—That's what I said.

Her Father—But how do you expect to support her on an income of $1200 a year?

Young Man—Oh, come now, your income must be ten times that amount.—Boston Transcript.

An Invitation

We invite deposits from every one—rich, poor, old and young. We recognize no classes, but treat large and small depositors with the same courtesy and consideration.

Union Made

Taylor's Nautical Academy

Established 1888

Consular Building, Corner Washington and Battery Streets, Opposite New Custom House, San Francisco, Cal.

THIS OLD AND NOTEWORTHY SCHOOL is under the direct and personal supervision of CAPTAIN HENRY TAYLOR and equipped with all modern appliances to illustrate and teach any branch of Navigation.

The class of teachers of Navigation in the past have been those having simply a knowledge of Navigation, and Navigation only. Conditions have changed, and the American seamen demand a man as a teacher with higher attainments than one who has only the limited ability of a seaman. The Principal of this School, keeping this always in view, studied several years the Maritime Law, and is now, in addition to being a thorough teacher of Navigation and its kindred subjects, a regularly admitted Member of the Bar.

There is no standard of education required of a pupil entering the School, for no matter how ignorant the seaman may be, even in the rudiments of common education, Captain Henry Taylor will teach and raise him from the depths of ignorance to the height of the average well-informed man, and in a comparatively short interval of time.

Horace R. Taylor — Henry Taylor

THE SEAMEN'S JOURNAL

FOR THE SEAFARING PEOPLE OF THE WORLD.
Official Paper of the International Seamen's Union of America.

A Journal of Seamen, by Seamen, for Seamen. Our Aim: The Brotherhood of the Sea. Our Motto: Justice by Organization.

VOL. XXXII, No. 26. SAN FRANCISCO, WEDNESDAY, MARCH 5, 1919. Whole No. 2528.

DEMOCRACY IN INDUSTRY

An Impressive Contrast Between the Rhine and the Monongahela

The International Seamen's Union of America is co-operating, financially and otherwise, with the American Federation of Labor Committee for organizing the Iron and Steel Workers.

Needless to say, the steel trust is again resorting to the usual ruthless tactics in preventing the unionizing of the various plants under its control.

Just how far the henchmen of the steel trust are ready to go in suppressing unionism is well and ably told in this page by John A. Fitch, a staff writer of the Survey. Mr. Fitch is a trained and experienced observer, and when he expresses the hope that the A. F. of L. will push this particular organizing campaign to a successful issue he doubtless has in mind the obvious consequences of failure even more than the possible results of success.

It is a long way from the Hotel Astor in New York to the mayor's office in McKeesport, Pa., and what "great captains of industry" may say in after-dinner speeches has slight influence on the activities of little second lieutenants out on the firing line. A few weeks ago Charles M. Schwab grasped the hand of Samuel Gompers at the dinner of the American Academy of Political Science in New York, acclaiming him as patriot and good citizen, enemy of Socialism and the Bolsheviki. At just about the same time the mayor of McKeesport, home of one of the biggest plants of the United States Steel Corporation, was denying to representatives of the American Federation of Labor the right to hold a public meeting, on the ground, as reported by the organizers, that "the A. F. of L. is a bunch of I. W. W., anarchists, Bolsheviki and agitators."

The Pittsburgh steel district is running true to form. Unionism was destroyed there in 1892. Since then every manifestation of an independent spirit on the part of the workers has been met by ruthless and unscrupulous opposition. It is not surprising, therefore, that the present campaign to organize the steel workers should encounter obstacles in the towns along the Monongahela more difficult than those confronting it anywhere else.

There is a National Committee for Organizing Iron and Steel Workers, with headquarters in Pittsburgh. Samuel Gompers is chairman of the committee. This committee reports that:

"In Braddock and Homestead, where halls for mass meetings had been secured and paid for, the local city officials terrorized the owners of the halls into calling off the meetings and refunding the rent money. In Rankin, where the hall proprietor had more courage than usual and refused to submit to such outrageous dictation, the local board of health was made to take him quickly in hand and close his place."

These are old tactics, well known to union organizers. Intimidation of property-owners has long been a favorite resort of employers who do not wish their employees to attend meetings. But in McKeesport, a city of more than 40,000 population, twenty miles from Pittsburgh, the situation was different. No intimidation of this sort was necessary. McKeesport had a little mayor and he had a little law. The organizers' report continues:

"In McKeesport, the un-American and unconstitutional regulation prevails that the sanction of the mayor must be had before public meetings can be held. It is impossible to hire a hall until this regulation is complied with. A. F. of L. organizers, therefore, proceeded to Mayor Lysle to secure the necessary permit for their meetings. They were refused point blank and told that the A. F. of L. is a bunch of I. W. W., anarchists, Bolsheviki and agitators and would not be allowed to hold any meetings in that city."

In spite of the reputation given the American Federation of Labor by the mayor, the McKeesport City Council has as one of its members the President of the Central Labor Council of the city. So the matter was taken to the City Council. The labor member of the body offered a resolution requesting the mayor to grant a permit. His motion did not even receive a second.

The situation was then brought to the attention of President Gompers, and on December 9 Mr. Gompers wrote a letter to the mayor of McKeesport mentioning his recent return from Europe, where he had gone "in performance of a duty in the interest of the common cause in which our country and our Allied countries were engaged," and then his meeting "with representatives of the Central and South American countries where the effort was made to establish and maintain more friendly relations among the people of all the American republics." After returning from these patriotic duties the first thing that came to his attention at his office was this refusal to permit representatives of the American Federation of Labor to hold a meeting. In his letter Mr. Gompers said:

"Permit me to say that the meetings contemplated to be held and permission for which was asked were to be meetings of workingmen inviting other men to participate and to discuss questions of importance affecting their interests, their welfare, and to discuss them in a manner always recognized as purely American. The laws of our land not only permit but guarantee the right of the holding of such meetings. I can readily understand that when our country was at war, when our cause might be endangered by reason of certain classes of meetings that as a matter of war necessity a stricter interpretation and action might find some seeming justification, but for all practical purposes the war is over, we have won a glorious victory and labor has contributed no mean part to that result. But, in any event, meetings of the character contemplated to be held in McKeesport are of a nature permissible whether at war or at peace. It is the lawful and the moral right for working men to meet in McKeesport or elsewhere. . . .

"Viewing the situation in many lands today, I submit that this of all periods is not the time when any autocratic, domineering attitude should be assumed by any government or public official. This is the time when rights are being contended for. This is the time when a larger concept of human justice and human liberty are to prevail and I commend to your very serious consideration not only the injustice but the very hazardous attitude which you have assumed in denying the right and the opportunity for free open meetings as requested by the committee to which I have referred."

Mr. Gompers concluded his letter by inviting the mayor to revise his decision and to reply at his "earliest possible convenience."

How far this Pittsburgh attitude is out of joint with the spirit of the times is shown by the progress of the campaign in other fields. The spread of organization in the steel industry in such centers as Gary, Joliet, Bethlehem and Philadelphia has become noteworthy. Employees of the Colorado Fuel and Iron Company in the steel works at Pueblo have formed a local of the Amalgamated Association of Iron, Steel and Tin Workers. Other locals have recently been organized in Cleveland, Louisville and Atlanta.

The spread of collective bargaining in the steel industry, as fostered by the employers themselves, which has been going on at such a remarkable rate for the last few months, may or may not have been inspired by the organizing campaign of the unions. The fact, however, that such a movement is under way indicates the growth of a spirit very different from that recently manifested in the Pittsburgh district. There has been no more bitter enemy of unionism and collective bargaining than the Carnegie Steel Company. At no time has it manifested greater hostility to such a movement than during the ten or fifteen years that A. C. Dinkey was its president. There is unusual significance, therefore, in the fact that it is now this same A. C. Dinkey who, as president of the Midvale Steel Company, causes a notice to be posted in the plants of that company reading, "We recognize the right of wage-earners to bargain collectively with their employers."

If this change of heart on the part of Mr. Dinkey is significant, much more so is the recent announcement of the Bethlehem Steel Company that its employees shall be granted the right to join unions if they choose to do so. This is the same Bethlehem Steel Company which, in 1910, precipitated a strike of its employees in the Bethlehem plant, when it replied to a request from a committee of its employees for one day of rest in seven by discharging the committee. The Colorado Fuel and Iron Company at Pueblo once discharged not only a committee from the switchmen in the yards, but all of the switchmen, because of the presentation by the committee of a request for higher wages. For nearly three years now the employees of the Colorado Fuel and Iron Com-

pany have been guaranteed the right, without interference from the company, to join the union of their choice.

The companies where these policies have been developed have their headquarters at some distance from Pittsburgh, but there is plenty of evidence that the virus is at work under the very eaves of the United States Steel Corporation. Youngstown, Ohio, is sometimes mentioned as being within the Pittsburgh district. It is an integral part of that vast community of blast furnaces, steel smelters and rolling mills which occupies several counties in Western Pennsylvania and Eastern Ohio. The Carnegie Steel Company has mills in Youngstown. At almost the very time that Homestead was making it impossible for a union meeting to be held and McKeesport was denying a permit to Mr. Gompers' committee, the Youngstown Sheet & Tube Company was offering to its employees a scheme of representation involving the election of committees and collective bargaining and one of the important clauses of the proposal reads, "The representation of employees herein provided for in no way abridges or conflicts with the right of employees to belong to labor unions."

The United States Steel Corporation takes pride in the thousands of its employees who put on the uniform of their country and offered their lives to make the world safe for democracy. Those of them who return are to find, apparently, that after all their sacrifice on the battlefields of France, two of the supreme essentials to democracy—freedom of speech and assembly—are to be denied them at home! No one who ever supported the recent war on the ground that it was a war for freedom and who honestly meant a word of what he said, can fail to hope that the American Federation of Labor will push this matter vigorously and to a successful issue. American soldiers on the Rhine are guarding the fruits of the victory of democracy. Let them not be lost on the Monongahela!

THE SEAMEN'S ACT.

Shipping interests are pressing for an amendment of the Seamen's Act, to the end that ships may be operated more cheaply. But they ask for this at the expense of safety to the traveling public. They are demanding that the percentage of sailors capable of understanding orders be reduced—that is, they ask that more men be shipped as sailors who are utterly incapable of saving life in a wreck or other emergency.

The Seamen's Act provides that a certain percentage of seamen must be able to understand orders given by officers. Unless evidence of an overwhelming character can be presented to show that this requirement is against public policy, it should stand firm against any assault of men anxious to make money by gambling with human life.

The Seamen's Act also releases sailors from the semi-slavery to which they alone of all workingmen in the world have been subjected. It permits them to quit a ship and collect the wages due them, unless they are otherwise bound by contract. But it is now proposed to repeal this fair and just provision, and again subject sailors to the iron rule of shipmasters anywhere in the world.

The act has not been fully enforced—and the failure to enforce it will react with deadly effect upon recreant officials one of these days—but even its partial enforcement has had the effect of raising the standard of life and conduct among sailors to a parity with other callings. It is no longer a disgrace to be a sailor, and American lads are now going to sea in the new ships that are to develop American commerce. Yet the short-sighted shipowners are trying to break down this standard at the very moment when the Government is trying to cultivate a taste for the sea in young Americans.

The Seamen's Act should be enforced, and must be enforced if the United States is to have a merchant marine with American seamen.—Washington (D. C.) Post.

"DIVINE RIGHTS" OF COURTS.

(By W. B. Rubin.)

We have always heard of the divine right of kings,—a right claimed by them to be inherited from heaven, a direct line from the Almighty in heaven to the almighty on earth.

And the strange thing about it is that the kings themselves believed it, and the vast majority of the people acquiesced therein.

William Hohenzollern claimed to rule Germany by "divine right." He wanted to conquer the earth by "divine right."

To question him in any way in the realm in which he was "monarch of all he surveyed" was lese majeste, and punished not according to the established law of the land, not according to natural guaranties of human liberty, but according to the whim and caprice of the punisher, without limitation upon the punishment and sentence therefor.

Every person who gets a little power tries to emulate that "divine right." In this country, capitalists, from Baer, the coal baron, up and down, have claimed "divine right."

We have no kings in this country and, therefore, we have no "divine right."

But we have courts in this country and they claim "inherent power." Notwithstanding constitutional limitations and statutory regulations, they claim "inherent power."

This "inherent power," the courts declare, comes with the birth of every court and gives them the right to "protect" the "dignity and majesty" of the court. Though the people gave the power to the court, the court, through its "inherent power" rises above the people.

The United States Supreme Court says that the "inherent power" of the court is absolute and any statute or act of Congress which would seek in any way to control or curb that "inherent power" would be declared, not by the people but by them, the courts, unconstitutional.

The "inherent power" of courts is equivalent to the "divine right" of kings.

In this "inherent power," the judge has the full say. To offend him, the judge, the king of his court, is to be in contempt of court.

Contempt of court equals lese majeste of kings,—a delegation by the king to the judge.

In contempt of court, the judge may be and is

The complainant,
The witness,
The prosecutor,
The judge,
The jury,
The sentencer,
And the executioner.

Yet in this year of our Lord nineteen hundred nineteen, in the One Hundred Forty-Third Year of Our Democracy, the "inherent power" of the court exists among us as strong as the "divine right" of kings existed among the empires a half century back.

There can be no democracy in Europe until all kings have been made to abdicate, until "divine right" shall forever cease to exist, until "Vox populi, vox Dei" is the only voice that shall be heard.

In the United States there can be no absolute democracy until the courts shall be shorn of their "inherent power" by which the rights of the people are invaded, their constitutional guaranties knocked down, and "inherent power" shall be no more.

Time and again I have uttered, "Capture the Courts." Until you do so, Labor's fight for progress, for democracy, for economic independence, and the right of the worker to equality is an up-mountain task.

PANAMA CANAL TRAFFIC.

During the past fiscal year there were 1936 commercial and 335 non-commercial lockages at Gatun, and 2096 commercial vessels were passed; at Pedro Miguel there were 2041 commercial and 379 non-commercial lockages, and 2083 commercial vessels were passed; at Miraflores there were 2017 commercial and 326 non-commercial lockages, and 2081 commercial vessels were passed. The number of ships passed exceeded the number of lockages on account of passing more than one ship through in one lockage under certain conditions. There were no delays to ships due to the failure of the operating machinery of the locks, and as heretofore the damage to vessels has been chiefly due to the breaking of chocks and bitts. The tolls actually collected on vessels transiting the canal during the year amounted to $6,439,083.99. The sum of $2321.25 was collected in addition for tolls on a vessel that passed through the canal during the preceding year. On account of the present legislation relating to rules of measurement of vessels, including the amounts refunded during the year, under authority of the act of Congress of June 12, 1917, the total loss of revenue since the opening of the canal has aggregated $2,797,260.26. The chief beneficiaries of the present rules of measurement have been vessels under foreign register. There were expended in the operation and maintenance of the canal $5,903,719.69, as compared with $6,788,-147.60 during the previous year. These figures indicate revenues earned in excess of expenses amounting to $697,556.23, as against a loss of $979,648.90 for the previous year.

MODERN WHALING.

The most expert whalers of to-day are believed to be the Norwegians. Many years ago British whalers were supreme, but owing to the government withdrawing the bounties which had been paid for the encouragement of the industry, the number of British whalers fell off. The most successful whaling ground just now is the South Atlantic, in the neighborhood of South Georgia, the South Shetlands and the South Orkneys. The use of steam-whalers has produced an enormous increase, for whereas in 1906 only 83 whales were caught in the Antarctic islands, last year 7516 were caught, the total value of the products being £1,512,000. No fewer than 268,000 barrels of oil, valued at £1,010,000, were taken from the whales; the bone fetched £1,750 and the guano £2,601. In addition there were 2,941 sea elephants and 77 sea leopards killed, valued at £26,000.

When the union card is hanging in a barber shop it is an assurance that union barbers are employed exclusively. The absence indicating a non-union shop. Assist your fellow union men by patronizing only the union card shop.

WEEKLY NEWS LETTER

Contributed by American Federation of Labor

Relying on the "Boycott."

The League of Nations, proposed by the Paris conference, would rely mainly on an international boycott to enforce arbitration awards or decisions by the Executive Council of the league.

The league will be controlled by the five war victors—the United States, Great Britain, France, Italy and Japan—whose representatives, together with representatives of four other countries to be selected, will form the Executive Council. Should any member of the league refuse to abide by arbitration decisions or recommendations by the Executive Council, this shall be construed as an act of war against the other members of the league and the international boycott shall be applied. The boycott shall be extended to countries outside the league which attempt to do business with the offending nation.

Any war or threat of war, whether affecting members of the league or not, is declared to be a matter of concern to the league which reserves the right to take "any action" that it may deem necessary to safeguard the peace of nations.

Members of the league shall not resort to war until after an arbitration award or recommendation by the Executive Council and even then, it is agreed that war will not be waged against any member of the league who complies with such arbitration award or with the recommendation. The award must be made "within a reasonable time" and the recommendation within six months. The Executive Council shall formulate plans for the establishment of a permanent court of international justice. Headquarters of the league will be established in a country to be selected and an international secretary placed in charge.

The league will undertake to preserve the territory and "existing political independence" of affiliates and in case of danger the Executive Council shall advise "upon the means by which the obligation shall be fulfilled."

Any nation may join the League of Nations by a two-thirds vote of the countries now represented, providing the applicant is a self-governing country. The control of the league through its Executive Council, will not be affected by this addition as the Executive Council is permanently limited to representatives of nine countries, five of whom are the United States, Great Britain, France, Italy and Japan.

The maintenance of peace, it is declared, will require the reduction of national armaments and the Executive Council shall formulate plans for effecting such reduction, based on the necessities of the nations.

The nations agree that "the manufacture by private enterprise of munitions and implements of war lends itself to grave objections," and the Executive Council is directed to recommend how these evils can be checked.

Members of the league pledge themselves not to conceal from each other the condition of those industries in their countries that are capable of being adapted to warlike purposes or the scale of their armaments "and agree that there shall be full and frank interchange of information as to their military and naval programs." A permanent commission shall be appointed to advise the league on the execution of this pledge.

The league's agreement contains this reference to labor:

"The high contracting parties will endeavor to secure and maintain fair and humane conditions of labor for men, women and children, both in their own countries and in all countries to which their commercial and industrial relations extend, and to that end agree to establish as part of the organization of the league a permanent bureau of labor."

The members of the league agree not to enter into any treaty that is inconsistent with any provision of the agreement adopted. No nation will be admitted to the league's membership, if it is bound by a treaty inconsistent with the league's principles. The applicant nation must "take immediate steps to procure its release from such obligations."

The agreement between the nations can not be amended unless it secures the approval of the States whose representatives compose the Executive Council and by three-fourths of the nations comprising the league.

Pure Milk Necessary.

The need for public action to place clean milk within the reach of every family having little children is emphasized in a report on the New Orleans milk situation, issued by the Children's Bureau, Department of Labor. It is shown that 70 per cent. of the children under 8 years of age who were not breast fed were getting no fresh milk at all to drink. Only 20 of the 413 children from 2 to 7 years old included in the study were drinking as much as three cups of fresh milk a day. Only 63 per cent. of the babies under 2 years old, who are not nursed by their mothers, have milk to drink, leaving more than one-third of these little children without fresh milk.

The situation, says the report, gives cause for grave concern because the children are not only being deprived of the best and most nourishing food for normal development, but they are being given injurious substitutes. Of 338 children 7 years old or younger who are not breast fed and are getting no fresh milk to drink, 245 are given tea or coffee in place of it.

Although figures regarding income were not secured, the families are of about the same economic status as those included in the recent Washington study, where more than three-fourths of the families were living on $20 a week or less.

This Boss Is Real Mad.

Dress workers affiliated with the International Ladies' Garment Workers' Union at Mount Vernon, N. Y., are demanding a 44-hour week but they won't get very far with the Matilda Waist Company if the manager carries out his threat. He has given notice that he will take a

World's Workers

Over 12,000 workers employed by the Porto Rican American Tobacco Company at San Juan, Porto Rico, have been idle since the first of the year because of an order from President Toro, in New York, who stated that "on account of the condition of the cigar market" it would not be advisable to continue operations. This order came at the time the agreement with employees expired, and the unionists charge that the shutdown is a lockout. Of the idle workers approximately one-half are cigar makers. The others are strippers and other employees, many of whom are women.

A dispatch published in Le Populaire (Paris, France), for January 9, contains a report that Prince Kropotkin together with Maxim Gorky, Martof, Spiridoniva and others, have joined hands with the Soviet Government in the interests of a free Russia. The death of Kropotkin has been announced a dozen times. He was arrested because of the publication over his signature of an appeal inviting the Russians to assist the English and French army of invasion. On the day of the first anniversary of the Soviet, a general amnesty was voted, under the promise of which Prince Kropotkin was released.

In discussing the question of shorter hours in the cotton trade, the Manchester (England) Cotton Factory Times says: "Of one thing the workers may rest well assured, that any advance depends entirely upon themselves, as no help is to be expected from outside sources, and the sooner they set about the task on definite lines the better will be the prospects of success. The present mill hours are 55½ per week, and so far as anyone outside the trade is concerned, they may remain at that. As a body, the employers give not the slightest practical sign that they intend to make any move to meet the operatives' desires."

The general committee of the Norwegian Labor party has decided to address an earnest demand to both the central executive of the Labor party and to the governing board of the trades unions, asking these two bodies to come together in order to discuss and formulate the demands that the working class shall now make. In this way, the committee believes, there can be brought about a powerful movement toward obtaining an equitable electoral system, the dethronement of militarism, the universal introduction of the eight-hour day, the amelioration of the great need for living quarters, and extend socialization of the communities.

"Avanti," the Italian Socialist organ, in its edition of December 13, publishes the decisions arrived at in a meeting of the national executive of Italy. The foremost among these are: Propaganda among the Italian public and at the Paris Peace Conference in favor of withdrawing troops from Russia and of abandoning the policy of intervention; a demand that a Socialist republic be created in Italy under the dictatorship of the proletariat. The executive also received a report by Oddio Morgari, Italian Socialist deputy, who, in Paris, together with the Jugo-Slavic Socialists, had signed a protest against the military occupation of Jugo-Slavic territory, and against annexations without a plebiscite.

FOR ALL STOMACH MISERY

LAXCARIN

Is a remedy for the permanent relief of all kinds of stomach trouble. Helps digest and assimilate your food, giving you good, rich blood, neutralizes the excessive acids, which causes that miserable, sour, gassy, bloated feeling after eating, nervous indigestion, belching, etc., relieves you of constipation, giving a freedom of action of the nerves, and proper circulation of the blood. Contains no harmful drug, no alcohol.

Prompt results in case of long standing, when everything else you have tried has failed. One box will convince you of its merits.

Pacific Coast Marine.

The four-masted schooner "Else," 724 tons register, built at Tacoma in 1916 and owned by A. O. Anderson & Co., has been sold to the Pacific Freighters Co. for $90,000.

The 8800-ton steel freighter "West Alcoz" was launched at 8.35 A. M. on February 26 at the Shaw-Batcher shipyard in South San Francisco. Miss Madeline Evers christened the ship.

The four-masted schooner "Virginia," 541 tons register, built at Alameda, Cal., in 1902, and owned by J. M. Scott, has been sold to the Pacific Freighters Co., San Francisco, for $60,000.

With the arrival of the American barkentine "Benicia" in Seattle during the week it was learned that the vessel has been sold by H. G. Seaborn and associates of Seattle to Whitney & Bolden of Mobile. The ship arrived from Sydney with a cargo of copra.

Officials of the Pacific Steamship Company gave out the information that negotiations are being continued by the San Francisco office of the company with the San Francisco-Portland Steamship Company for the steamer "Rose City" which, for a number of years ran between this port and California points.

Making her first voyage in peaceful pursuits since the cessation of hostilities, the Canadian-Pacific liner "Empress of Asia" sailed during the week from Vancouver for Yokohama and Japan with a full passenger list. The "Empress of Asia" did twenty months of war service for the British Government as a troopship.

Announcement is made from the office of the San Francisco Board of Marine Underwriters that the highest bid for the wreck of the auxiliary schooner "Janet Carruthers," which is stranded on the beach near Grays Harbor, was $11,100, submitted by a Mr. Price of Seattle, and it will probably be accepted by the board. The highest offer for the vessel's cargo was $600.

Assignment of two more steel steamers, the "Glendola" and the "Cokesit," to the Sudden & Christenson Company for carrying flour to the Atlantic Coast for the Government was announced during the week by officials of the operating company. The steamers will likely be turned over to the Shipping Board this week, and in less than two weeks the details of the charters can be concluded.

The two-masted schooner "Moana," Captain V. Brisson, of Tahiti, drifted helplessly about the South Pacific for several weeks because none of the crew were well enough to man the ship, according to advices received during the week. The crew were ill with influenza. The "Moana" arrived at Papeete with the crew in a critical condition. The "Moana" has engaged in the copra trade for several years.

Information received from Washington says Coos Bay will receive $101,000 for maintenance of the dredge "Colonel P. S. Michie" for 1919 and $130,000 for the dredging of the inner harbor. It is believed that a portion of the Michie fund is for the purpose of constructing an oil station at Empire which would save the dredge one day's time each week and would eliminate the necessity to come to the upper bay for oil.

An item in a recent issue of a publication devoted to the interests of the canning industry states that the tuna canning season for 1918 closed with the smallest pack in years. This publication is also authority for the statement that the demand for American canned salmon is running ahead of production and the main problem at present is to prevent decrease of the raw fish supply rather than to add to the popularity of the product.

Reports received from Australia state that the barkentine "Thomas P. Emigh" made the passage from Port Angeles to Port Pirie in seventy days. The vessel carried 1,500,000 feet of lumber. The barkentine "Conqueror," which arrived at Cape Town during the week, is reported to have made the passage from Sydney in forty-six days. The steamer "Annette Rolph" arrived at Sydney from Newcastle on February 24 with leaky boilers.

A fishing vessel said to be owned by the California Canning Company of San Pedro was wrecked at Willows, off Santa Cruz Island, on February 24, the three fishermen making up the crew being forced to swim ashore. The wrecked schooner was valued at between $10,000 and $12,000 and was one of the largest boats of the company. The wreck was caused by engine trouble, the boat having sought shelter in the bay during a heavy storm.

The Columbia River fishing fleet is due to leave for Alaska on or about April 15. The fleet consists of four sailing vessels, the "Berlin" and "Levi G. Burgess" operating for the Warren Packing Company, and "St. Nicholas" and "Reuce" of the Columbia River Packers' Association. The vessels go to Bristol Bay, Alaska, with crews and supplies and usually remain there until ready to depart for the home port in August laden with caned salmon.

The ocean-going launch "Cleopatra," one of a fleet of four boats purchased from the Crowley Towboat and Launch Company of San Francisco by the Mexican Government, was wrecked fifteen miles south of Magdalena Bay, according to word received during the week. The "Cleopatra" ran aground during a dense fog, the craft striking a ledge that tore a great hole in the hull. The vessel is reported to be a total loss. The crew will be brought to San Diego on the British motor-ship "Gryne."

All of the ship owners have been notified by the Shipping Board that they must purchase the wireless sets now on their vessels or place the outfits on the docks. They also have the option of making arrangements with the Marconi Wireless Company to have a service installed, or they may purchase the sets from the private concerns. The sets were all purchased from the Marconi Company by the Government at the beginning of the war when the land wireless stations were taken over. Now that the outfits are to be disposed of, it is believed that the Government intends to restore the radio to private operation again. The Marconi officials say that they have no objection to supplying the service and sets if the Government is willing, and it is understood that this will be done.

Bulletins recently issued by the Bureau of Fisheries contain statistics of the quantities and values of fishery products landed at Seattle, Wash., by American fishing and collecting vessels during the months of November and December, 1918. The fishing fleet in November landed at this port 33 trips, aggregating 404,700 pounds, having a value to the fishermen of $56,230. These products included halibut, 240,900 pounds, valued at $48,700; sable fish, 98,800 pounds, valued at $5,310; "ling cod," 44,000 pounds, valued at $1,570; and rockfishes, 21,000 pounds, valued at $650. In addition to this catch, collecting vessels landed 431,590 pounds of salmon, steelhead trout, skates, smelt, flounders, and other species, valued at $40,957. In December the fishing fleet landed 13 trips, aggregating 208,100 pounds, having a value of $29,521. The products included halibut, 115,500 pounds, valued at $23,165; sable fish, 22,100 pounds, valued at $1,626; "ling cod," 49,500 pounds, valued at $3,260; and rockfishes, 21,000 pounds, valued at $1,470. The products landed by collecting vessels during the month amounted to 838,600 pounds of salmon, steelhead trout, herring, smelt, and other species, valued at $79,206.

In anticipation of a big increase in the San Francisco fishing industry, the Board of State Harbor Commissioners has arranged to construct another wholesale and retail shipping, packing and distributing plant at the foot of Leavenworth street. Construction of the substructure upon which the building will rest is under way. The market will be leased to the Borzoni Fish Company and will be fully as big as the one now nearing completion at the foot of Mason street for F. E. Booth & Co. According to various representative fish men, the local output of fish is to be increased by the installation of additional trawlers of the "Ituna" type. These are equipped with the Scotch otter nets and deflecting boards, which make it possible for one trawler to do the work of two under the old method. The new method was adopted by the Scotch, British and other European fishermen on the North Sea some time ago, and permits the successful operation of a fishing craft in rough weather. Captain C. Ramsey, the veteran Scotch fishing expert who was brought to San Francisco from Leith to supervise the nets on the "Ituna," has reported that, owing to the sandy bottom prevailing at the local fishing banks, it is possible to make big catches even during rough weather. This is possible because the deflecting boards which keep the huge mouth of the net open to receive the fish, keep the net at the bottom. As the fishing may be done at a depth of fifty fathoms, the storm which agitates the surface does not ruffle the lower waters. The installation of the additional facilities for the handling of fish will make it possible to care for all of the surplus catch, either by salting away in barrels or by placing it in cold storage. Both plants will be equipped with a large refrigerator capacity. Plans are now being evolved for the distribution of fish throughout the interior of California, Nevada and other Coast States in refrigerator cars.

F. R. WALL, who was for many years an officer in the United States Navy, is now practicing marine law in San Francisco. He gives claims of all seafarers careful attention. 324 Merchants Exchange Bldg., 3rd Floor, California St., nr. Montgomery. Phone, Sutter 5807 (Adv.)

SILAS B. AXTELL, attorney for the Eastern & Gulf Sailors' Assn., Marine Cooks & Stewards' Association, Marine Firemen, Oilers & Water Tenders' Union, has moved his offices to the ground floor of the Washington Building, One Broadway, New York. Entrance room J, ground floor. Consultation and advice on all matters relating to enforcement of the Seamen's Act, claims for Compensation or damages, will be given free of charge as in the past, by Mr. Axtell and his expert assistants, Mr. Vernon S. Jones and Mr. Arthur Lavenburg. (Advt.)

Established in 1887

PAUL SCHARRENBERG.....Editor
S. A. SILVER.....Business Manager

TERMS IN ADVANCE.

One year, by mail - $2.00 | Six months - - - $1.00
Advertising Rates on Application.

Business and Editorial Office, Maritime Hall Building, 59 Clay Street, San Francisco. Telephone Kearny 2228.

Changes in advertisements must be in by Saturday noon of each week.

To insure a prompt reply, correspondents should address all communications of a business nature to the Business Manager.

Entered at the San Francisco Postoffice as second-class matter. Acceptance for mailing at special rate of postage provided for in Section 1103, Act of October 3, 1917, authorized September 7, 1918.

NOTICE TO CORRESPONDENTS.

Communications from seafaring readers will be published in the JOURNAL, provided they are of general interest, brief, legible, written on one side only of the paper, and accompanied by the writer's name and address. The JOURNAL is not responsible for the expressions of correspondents, nor for the return of manuscript.

WEDNESDAY, MARCH 5, 1919.

HUMAN RIGHTS FIRST!

A Congress of Nations met at Vienna one hundred and four years ago "to settle the fate of nations."

After nearly two years of arduous labor the delegates to that Congress had completed their work—but historians are fairly unanimous in their verdict that nothing worth mentioning in the annals of time had been really settled.

True, a political settlement had been made, territory had changed hands to gratify the ambitions of kings,—but the people who had done the real fighting to overthrow Napoleon received nothing more tangible than vague promises.

The Congress of Vienna, like the present Congress of Nations at Paris, had before it a magnificent opportunity to do away with all the old abuses and construct a new and progressive Europe. Unfortunately, no such generous idea was in the minds of the kings and their ministers. They were anxious only about their own powers and possessions. Their aim was to restore all the outworn ideas, which Napoleon had given such awful jolts, to lull the people into their ancient submission, and to go on in the same old ruts.

To be sure, then as now, there was before the world a horrible example of too much power vested in the rabble.

Then it was the French Revolution, the execution of Louis XVI, and the grim knowledge of all the mad excesses to which the "unbridled" rule of an ignorant populace had led.

Now we have the Russian Revolution and its horrible aftermath. It is true, no man can tell just what is to be the final result of the Paris Conference. At the 1814 Conference the crowned heads of Europe had only one great fear. They feared the new force that had already conquered in America and was slowly developing in Europe—the power of the people.

In 1919 crowned heads are fortunately not a determining factor in the deliberations of the conference. But the ascending power of the people is still feared and some of the shrewdest men on earth are right there, watching and waiting for the opportunity to get in their deadly work in behalf of the world's reactionary forces.

With few exceptions Americans generally seem to be well pleased with the achievements of President Wilson who has just returned with the draft of a charter for the League of Nations. It consists of a permanent constitution for the conferences of the Great Powers which have been settling the affairs of the world since the signing of the armistice. The most striking feature is the provision for mutual agreement to arbitrate or submit to inquiry all future international differences. With scrupulous regard for national sovereignty it makes no arrangement for an international police force. No provision is made for an international parliament or for direct representation of peoples as distinguished from governments.

There are possibilities for administrative actions by the league but their development remains uncertain. President Wilson, no doubt, feels satisfied that he has provided a framework for the league, though several essential provisions for which he contended are not there.

The main point to be borne in mind, however, is that every one of President Wilson's victories is tentative; that all depends on sustained effort—in the right direction. True, the covenant contains references to international labor legislation, internal traffic and freedom of commerce, disarmament, and the control of private manufacture of munitions, but nothing whatever is settled. Thus the solution of several of the most knotty points has been merely postponed.

It is certainly to be regretted that some provision was not made for direct representation of peoples. Japan, for example, is one of the five great "self-governing" nations which dominate the Paris Conference. But who will seriously contend that the Japanese people are self-governing as long as the existing property qualification for voting limits the suffrage in Japan to 1,422,000 voters, whereas the total population (exclusive of Formosa, Sakhalin and Korea) is in excess of 54,850,000.

However, despite all valid criticism of the proposed League of Nations it must be conceded that President Wilson's magnificent idealism has accomplished wonders.

As matters now stand the constitution of the league can be made either the greatest international proclamation of human rights the world has known, or it can be made as worthless and useless a treaty as was drawn in Vienna, a century ago.

What is needed at this stage of the game is a genuine awakening of the people to the grave and potential consequences of any League of Nations which is not founded upon the principle of "Human Rights First!"

THE INCOME TAX.

From 1861 to 1873 the people of the United States paid an income tax. Apparently it was a constitutional tax, because it was paid.

In 1894 Congress adopted another income tax act. Then a majority of the Supreme Court of the United States held the income tax to be unconstitutional. Subsequently one of that majority passed away and the new appointee voted the other way. So the tax became constitutional and an increasing number of Americans are paying the tax every year. Right now the income tax provisions of the Internal Revenue Act reach the pocketbook of every single person in the United States whose net income for 1918 was $1,000, or more, and of every married person whose net income was $2,000 or more. All persons, including seafarers, whose net income equaled or exceeded these amounts must file a return of income with the collector of internal revenue for the district in which they make their home on or before March 15.

Here is what will happen to them if they don't:

For failure to file a return on time, a fine of not more than $1,000 and an additional assessment of 25 per cent. of the amount of tax due.

For "wilfully refusing" to make a return on time, a fine not exceeding $10,000, or not exceeding one year's imprisonment, or both.

For making a false or fraudulent return, a fine of not more than $10,000, or imprisonment for not more than one year, or both, together with an additional assessment of 50 per cent. of the amount of tax evaded.

For failure to pay the tax on time, a fine of not more than $1,000 and an additional assessment of 5 per cent. of the amount of tax unpaid, plus 1 per cent. interest for each full month during which it remains unpaid.

In addition to the $1,000 and $2,000 personal exemptions, taxpayers are allowed an exemption of $200 for each person dependent upon them for chief support if such person is under eighteen years of age and incapable of self-support. The head of a family—one who supports one or more persons closely connected with him by blood relationship, relationship by marriage, or by adoption—is entitled to all exemptions allowed a married person.

The normal rate of tax under the new act is 6 per cent. of the first 4,000 of net income above the exemptions. In figuring up a seaman's income, board and lodging must be accounted for as an "income," in addition to the monthly wages and overtime pay.

Payment of the tax may be made in full at the time of filing return or in four installments, on or before March 15, on or before June 15, on or before September 15, and on or before December 15.

Revenue officers may be found in practically every port of the United States to aid taxpayers in making out their returns. Failure to see these officers, however, does not relieve anyone of the obligation to file his return and pay his tax within the time specified by law. In this case taxpayers must seek the Government, not the Government the taxpayer.

THE SIXTH OF MARCH.

On Thursday of this week the Sailors' Union of the Pacific will be thirty-four years of age.

The union was organized on Folsom street wharf, San Francisco, in the evening of March 6th, 1885, to right intolerable wrongs and to secure through organization the same justice and equality before the law which the Constitution guarantees to all Americans, whether ashore or afloat.

The 6th of March, therefore, may be rightfully regarded as the Seamen's Independence Day. For, not only did that memorable day bring forth a volley of words but it set in motion the sustained organized effort that has since practically revolutionized the condition of seafarers at home and abroad.

What were only fond hopes with that motley crowd which gathered at the Folsom street lumber pile on March 6, 1885, have long since assumed tangible, matter-of-fact form.

True, we have not reached the goal. We

still have to strive and struggle for the ultimate aim, but it is a well established fact that each succeeding year has shown a steady advance toward the distant goal.

From the very beginning it has been the desire of America's organized seafarers "to unite the seamen of the world under the banner of a common fraternity." For many years loosely knitted bonds of fraternity have been established with the Seamen's Union in other countries but only within the very recent past has it been possible to bring together accredited representatives from the Seamen's Unions of the World. And so the seamen's movement is growing, developing, and branching out in every corner of the seven seas.

But, after all, the magnificent record of the past, the splendid results of organized self-help for the last few decades, originating with that meeting on March 6, 1885, are but harbingers of a still greater future. In the language of Secretary Hanson, of the International Seamen's Union of America:

We are entering upon the year of great opportunity. Never before has the human race known such spirit and confidence. But opportunity is offset by obligation. The year will be what the people make it. Hence it is the moral duty of everyone to give earnest thought and supreme endeavor toward completing the work already begun. And lest there be some who do not know, or who fail to do, let us each double our effort, in order to make sure. Remember, this is the year of great opportunity

SHIPPING BOARD PUBLICITY.

The Shipping Board is to be congratulated for compiling and publishing the following useful and instructive pamphlets:

"Ships and the Ocean," a list of books on ships, commerce and the merchant marine;
"World Trade," a list of books on world trade;
"Foreign Countries," a list of books on foreign countries;
"Selection of Books on Foreign Languages," a list of books on foreign languages.

Any of these pamphlets may be obtained upon application to the United States Shipping Board, Washington, D. C.

It is surely gratifying to note that the Shipping Board has entered upon this new line of educational publicity.

All who have followed the abortive efforts of Shipping Board departments to secure publicity by issuing illustrated weekly newspapers of their own will no doubt be pleased with this apparent change in policy.

Weekly newspapers published in behalf of the various branches of our Government, at the expense of the American people, may have had their particular usefulness during the war. But since the signing of the armistice there has been little if any excuse for the appearance of these sheets. Perhaps those favorite individuals who have seen their portraits in print, from time to time, and who have become accustomed to receive puffs and write-ups, will miss their free advertising. But it is extremely doubtful whether or not any one else will mourn if the Shipping Board's weekly newspapers should just quietly cease to function.

When you spend your good union-earned money for non-union goods you have torn down just that much of the building the union men have spent hours in erecting. Such a policy is just like trying to lift yourself with your own boot straps; it can not be done. A chain is just as strong as its weakest link. Have a heart for yourself if you have none for others.

SPEAKING OF COPPER.

Frank E. Wolfe Thinks that 22,000 New Millionaires and Reductions in Wages Should Give Food For Reflection.

Wages were cut one dollar a day in the copper mines at Butte.

The cost of living remained at its highest point. The miners promptly went out on strike.

About twenty per cent. was taken out of the pay envelope of the men who have produced the copper needed in the successful pursuance of the war.

Mine owners claim the price of copper has fallen eight cents a pound. They say they have been compelled to reduce their dividend rate.

Managers of the mining companies at Butte and Jerome say they must keep the dividend rate up; that eastern investors demand results (dividends) and they don't question how they are obtained.

In the course of a speech made on the floor of the House recently Congressman Rainey said there were 22,000 new millionaires in the United States—created since the beginning of the war.

Possibly some of these are copper millionaires. Possibly some of them want dividends kept up and that they "Don't question how they are obtained."

Copper has been greatly in demand. The price has been high, high enough to help make some of the 22,000 new millionaires created by the war.

One of the newlymades (who lives in New York, not in Butte) said: "We have nearly six months' supply on hand. If a strike slows down production it will not be an unalloyed disaster."

No? Even though it have educational effects on the workers everywhere in America?

Wages cut at points where the cost of living is altitudinous and climbing will have educational effects. Who is to direct the course of that education? What will be the propaganda most popular among the idle copper miners?

The reconstruction program of the American Federation of Labor declares that:

"The workers of the Nation demand a living wage for all wage-earners, skilled or unskilled—a wage which will enable the worker and his family to live in health and comfort, provide a competence for illness and old age, and afford to all the opportunity of cultivating the best that is within mankind."

How to bring this about is the problem. It is an insistent problem and one that must be solved

There is nothing offered by the 22,000—nothing advanced beyond the instructions to the mine managers to get the dividends.

The I. W. W. agitators offer their plan in a short sentence: "Seize the mines." The Bolshevist is equally terse. He says: "Form a soviet. Let the miners run it."

The American people are not in favor of any such experiments. They have before them at least one vivid example—seizure by soviets. They are not willing, even though the newly-made copper millionaires seem to be feeding fuel to smoldering embers of revolt.

The American Federation of Labor favors giving the workers just wages and increasing their consuming capacity, developing home markets and fostering industries.

This brings us to the inevitable conclusion that there must, somehow, be established something that will supplant the "sliding scale of prices and wages" as now applied by the copper kings; something that will give to the workers the assurance that they can ever hold a relative wage. A system that will enable the workers' wage and the cost of living to remain on the same altitude.

* * *

Two millions of American soldiers are returning from the war. The vast preponderance of them are wage workers.

They have left fathers and brothers and fellow workers in the mines, the mills, the factories, the shipbuilding yards and in the varied industries. They are keenly aware of the loyalty of their comrades and brothers who remained on the great "second line."

These soldier-workers are men whose alert minds have been further quickened by their experience in the war. They are taking deep interest in affairs at home.

They will read with profound interest of the crop of 22,000 newly made millionaires—some copper; also of the copper miners whose wages were arbitrarily reduced 20 per cent.

They will think of the copper they vitally needed and used in the war and of the workers who produced it. They will think back to the battles; of their wounds; of their wounded comrades and of their dead; of the war for freedom and democracy.

They will think of the 22,000 who didn't dig copper, didn't work and didn't go, and of the 22,000,000 loyal workers who stayed and worked and dug copper and made possible winning the war for freedom and democracy.

Some of them, thinking, will wonder if, after all, the strikes forced by the agents of the dividend-seeking 22,000 are not really an unalloyed disaster for somebody.—By Frank E. Wolfe.

OFFICIAL.

SAILORS' UNION OF THE PACIFIC.

Headquarters, San Francisco, Cal., Mar. 3, 1919.
Regular weekly meeting came to order at 7 p. m., E. A. Erickson presiding. Secretary reported shipping medium with large number of members ashore.
JOHN H. TENNISON,
Secretary pro tem.
Maritime Hall Bldg., 59 Clay Street. Tel. Kearny 2228.

Victoria, B. C., Feb. 24, 1919.
No meeting; shipping slow; members scarce.
J. ETCHELLS, Agent.
Room 11, de Cosmos Block, 1424 Government Street.

Vancouver, B. C., Feb. 24, 1919.
Shipping fair; prospects good.
W. G. MILLARD, Agent.
58 Powell Street E. P. O. Box 1365. Tel. Seymour 8703.

Tacoma Agency, Feb. 24, 1919.
No meeting. Shipping and prospects medium.
H. L. PETTERSON, Agent.
2016 North 30th St. Tel. Main 808.

Seattle Agency, Feb. 24, 1919.
Shipping dull.
P. B. GILL, Agent.
84 Seneca St. P. O. Box 65. Tel. Main 4403.

Aberdeen Agency, Feb. 24, 1919.
No meeting. Few men around; shipping dull.
ED. ROSENBERG, Agent.
P. O. Box 280. Tel. Main 557.

Portland Agency, Feb. 24, 1919.
Shipping good; prospects good.
JACK ROSEN, Agent.
88½ Third Street. Tel. Main 6013.

San Pedro Agency, Feb. 17, 1919.
Shipping fair.
HARRY OHLSEN, Agent.
128½ Sepulveda Bldg., Sixth St. P. O. Box 67. Tel. 137 R.

Honolulu Agency, Feb. 17, 1919.
Shipping poor; prospects poor.
JACK EDWARDSON, Agent.

DIED.

John Emil Benson, No. 1454, a native of Sweden, age 37. Died at Fort Stanton, N. M., Feb. 20, 1919.

Harold Trovik, No. 1035, a native of Norway. Died in the wreck of the ship "Aryan," December, 1918.

Stockholders of the King Coal Company of San Francisco, of which James B. Smith is president and which took over all equipment and coal stocks of the Western Fuel Company last May, gathered at a special meeting during the week and voted to increase the capital stock of the company from $500,000 to $1,000,000. The object of the increase in the capitalization, according to President Smith, is to provide funds for betterment and additions to the company's plant and fleet of barges operating on San Francisco bay. It is planned to improve facilities so as to be able to discharge 600 tons of coal per hour from ships and railroad cars in anticipation of the increased business promised with the expansion of the port's commerce. The company is a close corporation, with all present capital paid in

OUR WASHINGTON LETTER.

(By Laurence Todd.)

From the Senate Committee on the Judiciary there was yesterday reported a bill, made up from bills introduced by Senator New of Indiana and Senator Jones of Washington, to curb any possible "labor revolution" in the United States. It provides heavy penalties for anyone who shall undertake to display or publish or circulate any flag, device or symbol suggesting the overthrow of the Government by force, violence or general strife. The bill is described as an anti-red flag bill, when in fact it does not mention the red flag, nor prohibit the use of any color of flag, but it does prohibit a general strike, and the agitation of a general strike, for the "overthrow" of government.

Why is that bill considered important? Was it the result of the Seattle strike, which at no time proposed any interference with the Government? Or was it drawn to prevent the further discussion and endorsement of the proposed Mooney strike, of next July 4th? If the bill should be passed—and there is slight chance that it will get through Congress in the few days now remaining before the end of this session—would it be construed by some corporation judge in Chicago, for example, to authorize the imprisonment of union men who might vote to strike on July 4th as a protest at Mooney's imprisonment?

This bill is not important in itself, but it is a straw in the wind. It shows how easy Congress finds the road to club-swinging, as compared with the road to furnishing employment and a living wage and a democratic voice in the management of the industries. Recently, while the Senate was haggling over the payment of an additional $240 a year to the vast number of Government clerks who get less than $2500 a year, and whose pay has not been increased materially since Civil War days, Senator La Follette took the floor and showed that during the period while the clerks' wages had stood still the members of the House and Senate, the President and Cabinet heads had received increases in pay that averaged at least 50 per cent. He read roll calls from the records of many years ago, when he first came to the Senate, and showed how only a handful resisted the demands for higher pay for Senators and Federal judges and other "higher-ups," but that there was always a big majority against any higher pay for common workers.

He called attention to the extortions of the big meat packers and the other profiteers, and declared that in all the days since John Sherman proposed a law against these criminal monopolists there had never been a real and persistent effort in the Department of Justice to smash the monopolies that bleed the workers of their small wages.

"Mr. President," he said, "I do not know what the end is to be, but I do believe that we must move with a degree of fairness and consideration in dealing with the masses of the people of this country. When they complain of these conditions, do not come in here and propose a law that shall suppress their complaints. I tell you that you are playing with mighty forces that may bring disaster upon us if you do that. If evils exist in this country, permit them to be talked about. That is the best way to correct it. If somebody indulges in wild and unreasoning and violent exhortation let him be answered. Permit, I would say, the widest discussion.

"As I said to one of the Senators who came across the aisle to speak to me the other day about the terrible thing that had happened at Poli's Theater, and appealed to me to say something to avert a class war in this country, I would put an open stand on every open space in the city of Washington, and I would say to everybody, 'Say what you please.' Then I would say to everybody else, 'Answer them.' Error exposed cannot stand long, unless it has a good foundation, and if we are guilty, if we have no defense for what we have done, it may be that we might incur some risk, Mr. President, upon the instant in permitting a full exposition of our shortcomings. However, I do not believe that. I believe that the wholesome cure for complaint is free discussion."

The Senate voted the $240 bonus for Government clerks, to meet the increased cost of living. As La Follette pointed out, it was far too little to cover the increase in prices of food, clothing and shelter, even for the past five years. The least that could have been given, in justice to the families of these thousands of workers in the departments, was $360 a year bonus. But Senator Underwood, in a sneering reply to La Follette, said that the Wisconsin Senator would probably have demanded $480 for them if the committee had allowed the $360 to go through.

"We need no Bolsheviki sentiment in this country that the people may be free," Underwood cried. "We need no bomb throwers under the Stars and Stripes in order that the will of the American people may be reflected in the law of this land; and no such sentiment exists in this country, no matter what the Senator from Wisconsin may dream."

Senator Cummins of Iowa, a few days ago, made a speech in which he endorsed the sentiment expressed so forcefully by Secretary Morrison of the American Federation of Labor, that the issue in this country is justice to labor, and it must be squarely and reasonably met—not evaded with a show of temper. In the new Congress the progressive leaders will make a fight for immediate attention to the whole industrial crisis.

In that remarkable pamphlet issued by the National Catholic War Council upon "Social Reconstruction," there is a discussion headed "Present Wage Rate Should be Sustained," which should be read by everyone—especially reactionary members of Congress. It says, in part: "The general level of wages attained during the war should not be lowered. In a few industries, especially some directly and peculiarly connected with the carrying on of war, wages have reached a plane upon which they cannot possibly continue for this grade of occupations. But the number of workers in this situation is an extremely small proportion of the entire wage-earning population.

"The overwhelming majority should not be compelled or suffered to undergo any reduction in their rates of remuneration, for two reasons:

"First, because the average rate of pay has not increased faster than the cost of living; second, because a considerable majority of the wage-earners of the United States, both men and women, were not receiving living wages when prices began to rise in 1915. . . .

"Even if the great majority of workers were now in receipt of more than living wages, there are no good reasons why rates of pay should be lowered. After all, a living wage is not necessarily the full measure of justice. All the Catholic authorities on the subject explicitly declare that this is only the minimum of justice. . . . The only persons who would benefit considerably through a general reduction of wages are the less efficient among the capitalists, and the more comfortable sections of the consumers."

This report, by the way, endorses the principle of minimum wage legislation for men as well as for women workers. It declares for a gradual raise in the minimum rate for men, from a subsistence wage for the man and his family, up to a rate of wages which will be "high enough to make possible the amount of saving which is necessary to protect the worker and his family against sickness, accidents, invalidity, and old age."

And until the wage rate has been raised to that decent point, the report favors the maintenance of complete social insurance for the worker and his family—this insurance to be paid for by the industry itself.

"No contribution," it points out with clear logic, "should be exacted from any worker who is not getting a higher wage than is required to meet the present needs of himself and family. Those who are below that level can make such a contribution only at the expense of their present welfare."

Just today the War Labor Board announced a decision by C. C. McChord, one of its umpires, in a dispute affecting nine firms in Madison, Wis., in which he set the minimum rate of pay at 40 cents an hour for men, and 35 cents for women who do the lighter work; the basic eight-hour day, with time and a half for limited overtime; shop committees to be recognized, and discrimination against union membership abolished. The maximum forty-eight-hour week in these shops and foundries is established.

This award is in sharp contrast with the proposal of Mr. Taft, a week ago, that the New York harbor boatmen and the affiliated harbor trades have no right to the eight-hour day. Taft had previously given his personal assurance to Thomas L. Delahunty, president of the Marine Workers' Federation, according to Delahunty, that the men need fear nothing; that their cause was just and that the public was with them. When the case came before the Board at its session in Chicago, however, Taft refused to sit more than a few minutes to hear the case, and delivered an opinion in which he argued on purely technical grounds that the Marine Workers' Federation must continue to work ten and twelve or more hours a day. He claimed that since President Wilson used the war emergency power to send the War Labor Board to deal with the New York harbor strike, the Board must assume that war conditions still prevail in the harbor; so he must assume that there is a shortage of harbor workers, and the eight-hour day cannot be granted.

Of course there is a surplus, to-day, of harbor workers waiting for jobs in New

York harbor. There was never so good an occasion as now to grant the shorter day without injuring any legitimate business. But Taft has gone back to his old anti-labor cronies, and he indicated as much by the laugh he gave the labor delegation as he walked out of the hearing room.

The Board drew lots to chose an umpire for this case, and the umpire drawn was V. Everit Macy, the man whose awards in the shipbuilding industry have been so strongly protested on the Pacific Coast. If he should side with Taft and the employers, and against the men, then it is a certainty that there will be unrest in the harbor of New York. Captain Delahunty thinks the men will want to go out again, as they did early in January.

President Wilson is to take up the whole labor situation during his week here before returning to Paris. It is possible that he will announce an entirely new method of dealing with the steadily increasing number of strikes.

SEAMEN'S ACT MUST STAND.

Every intelligent person realizes that the world has moved forward during the past few years. The thought that dominates every discussion among intelligent men concerning the social and economic relations of the future is that of adjusting matters on a basis of larger liberty and a better chance in the world for the generality of mankind.

The old rule of "devil take the hindmost" has been shot to pieces and buried in the ruins wrought by the cataclysm of war. Intelligent men, mindful of the lessons taught by four years of horrible strife engendered by the wrongs of the old system, are determined that these wrongs shall find no place in the plans for the reconstructon of the world.

Meanwhile a certain element among the shipowners of the country are heading in the opposite direction. Apparently the happenings of the recent past have left them cold and unimpressed. They take no stock in the maxim that "revolutions never go backward." On the contrary, they seem to think that the revolution through which the world is at present passing will carry them back to the "good old times" of long ago.

Not content to abide by the reforms made by recent legislation concerning seamen, these patriotic (?) promoters of the American merchant marine would wipe from the statutes the most important enactments of the past twenty-five years. Not content with his, they would go back to the period anterior to the establishment of the Nation itself and resurrect the conditions existing in a world that had not yet drawn its first breath of liberty.

All this, be it remembered, in the interest of the new American merchant marine! Well may that service pray to be saved from its friends among the shipowners!

A bill recently introduced in Congress proposes to abolish that provision of the Seamen's Act which guarantees seamen payment of one-half of their wages in every port of lading and discharge during the voyage. This provision was included in the first Act of Congress dealing with seamen, passed in 1790. The only change made by the Seamen's Act in this feature of the law is to make it mandatory, instead of optional as before. While the law was optional it was harmless from the shipowners' point of view. They disregarded it, and it became a dead letter. The provision of the Seamen's Act is objectionable because it must be obeyed. Hence the shipowners propose to repeal it and in so doing to abolish even the optional feature that has been part of the law for nearly one hundred and thirty years.

Under the present law the shipowner holds one-half of the seaman's wages during the entire period of the voyage as a guaranty that the seaman will fulfil his contract. The shipowner wishes to hold the whole of the seaman's wages, subject to his own pleasure in the matter of making part payment at ports of call during the voyage. Ostensibly the object is to improve the seaman's morals. In reality the purpose is to again place the seaman in a helpless position, compelled to submit to whatever impositon may be placed upon him under penalty of losing his entire earnings.

The shipowners also propose to amend the Seamen's Act by re-establishing imprisonment for desertion, thus reverting to the system which, as the United States Supreme Court in a recent decision declared, is based upon the laws of the ancient Rhodians, "which antedated the birth of Christ by about nine hundred years"!

For thirty years the seamen have been struggling to free themselves from this system. The Seamen's Act marked the successful completion of that work by granting seamen the "right to quit." The shipowners would undo the progress of a generation, and return at one step to the dark ages of human slavery.

This, be it still remembered, in the interest of the American merchant marine!

The bill in question would reduce the proportion of crews able to understand the orders of the officers from seventy-five per cent. to thirty-five per cent., and would also reduce the length of experience necessary to qualify as able-seaman from three years to twelve months. In a word, the shipowners wish to man their vessels with crews two-thirds of whom can not understand the language of the ships' officers and with able-seamen—the most important element of the crew—of only one year's previous experience. And so forth, and so on.

We do not believe it possible that Congress will act favorably upon these reactionary proposals. We know that these proposals are directly contrary to the spirit of the times. We also know that the American people do not wish the new merchant marine built up at the sacrifice of justice to the men who "go down to the sea in ships."

The American merchant marine, to be worthy of the Nation, must be built upon the highest standards in every respect.

The shipowners should be advised to turn around and face the future in the spirit of modern progress, instead of looking backward in the spirit of medievalism. In the former attitude they will find themselves in accord with a wide-awake world; in the latter attitude they need expect no company but that of the grave.—The San Francisco Star.

LABOR IN LEAGUE OF NATIONS.

It is not in contemplation that this should be merely a league to secure the peace of the world. It is a league which can be used for co-operation in any international matter.

That is the significance of the provision introduced concerning labor. There are many ameliorations of labor conditions which can be effected by conference and discussion. I anticipate that there will be a very great usefulness in the Bureau of Labor which it is contemplated shall be set up by the League. Men and women and children who work have been in the background through long ages and sometimes seemed to be forgotten, while Governments have had their watchful and suspicious eyes upon the manoeuvres of one another, while the thought of statesmen has been about structural action and the large transactions of commerce and of finance.

Now, if I may believe the picture which I see, there comes into the foreground the great body of the laboring people of the world, the men and women and children upon whom the great burden of sustaining the world must from day to day fall, whether we wish it to do so or not, people who go to bed tired and wake up without the stimulation of lively hope. These people will be drawn into the field of international consultation and help and will be among the wards of the combined Governments of the world. This is, I take leave to say, a very great step in advance.—President Wilson at the Peace Conference.

Labor's Economic Platform

Following is the Economic Platform adopted by the American Federation of Labor:

1. The abolition of all forms of involuntary servitude, except as a punishment for crime.
2. Free schools, free text books and compulsory education.
3. Unrelenting protest against the issuance and abuse of injunction process in labor disputes.
4. A work day of not more than eight hours in the twenty-four hour day.
5. A strict recognition of not over eight hours per day on all Federal, State or municipal work, and not less than the prevailing per diem wage rate of the class of employment in the vicinity where the work is performed.
6. Release from employment one day in seven.
7. The abolition of the contract system on public work.
8. The municipal ownership of public utilities.
9. The abolition of the sweat-shop system.
10. Sanitary inspection of factory, workshop, mine and home.
11. Liability of employers for injury to body or loss of life.
12. The nationalization of telegraph and telephone.
13. The passage of anti-child labor laws in States where they do not exist and rigid defense of them where they have been enacted into law.
14. Woman suffrage co-equal with man-suffrage.
15. Suitable and plentiful playgrounds for children in all cities.
16. The Initiative and Referendum and the Imperative Mandate and Right of Recall.
17. Continued agitation for the public bath system in all cities.
18. Qualification in permits to build of all cities and towns, that there shall be bathrooms and bathroom attachments in all houses or compartments used for habitation.
19. We favor a system of finance whereby money shall be issued exclusively by the Government, with such regulations and restrictions as will protect it from manipulation by the banking interests for their own private gain.

WEEKLY NEWS LETTER.

(Continued from Page 3.)

hatchet and smash all the machines before he will deal with the union.

The unionists don't seem worried over this sabotage threat. They laugh at the irate boss who is assured that others have made similar statements, but failed to "make good."

A representative of the union says the girls are paid 35 to 40 cents for a dress or suit that is sold for $30.

Big Steel Profits.

The financial editor of the New York World analyzes the last report of the Steel Trust, which has reduced dividends.

It is stated that the trust was earning at the rate of nearly $1,000,000 a day during the last quarter, of which the greater part was set aside for Government taxes.

"Under normal conditions," it is stated, "such earnings would be regarded as phenomenal. The steel corporation, during the entire year, set aside about 58 per cent. of earnings for corporation and excess profits taxes. If the taxes are cut in the pending revenue bill, as is generally expected, the corporation would still have a sizeable fund for the payment of dividends, and perhaps even extras, without showing earnings greater than in the last quarter of 1918 before the allowance for taxes.

"It appears to be plain that the steel industry was earning in the last quarter at a rate higher than in any but the most favorable pre-war times."

Private Owned Land Differs from Railroad.

In a memorandum submitted to the Senate Interstate Commerce Committee favoring the operation of railroads by employes, Glenn E. Plumb, attorney for the railroad brotherhoods, draws a sharp distinction between lands held by railroads and lands held by private parties. The attorney was discussing Government ownership and quoted court decisions to sustain his opposition to the claim that railroad lands should be appraised at the market value, regardless of investment, and that the manner in which these lands were acquired by the railroads must not be considered.

"Railroad property is property in which the Government or the public has an interest," it is stated. "It is acquired only for the public service and not for private use. It is dedicated to the public service by the fact of its acquisition and is held by corporations whose charters expressly limit the holding or acquisition, use and ownership of the property so acquired, to a holding, acquisition, use and ownership for public service.

"All railroad charters permit the acquisition of land only for railroad purpose, whether it be acquired by purchase, gift, grant or condemnation. All railroads are public highways. A railroad corporation is an agent of the State for the operation of a public highway. When it accepts a charter authorizing it to perform this function and acquires property, under such a charter, it thereby dedicates that property as a public highway for the public service. It retains in that property a private interest granted to it by its charter.

"That private interest is merely the right to hold title to the property, subject to the public right of user; to operate it in the interest of the public and to charge for its service such reasonable rate as will permit it to earn a fair return upon the money honestly and prudently expended. It has no right to sell the property which it holds except subject to the public right of user. It may not sell the property until its usefulness is extinguished. It may not give it away; it cannot merchandise its lands, its buildings or its equipment.

"Property held by such a title cannot have market value because market value or exchange value implies a freedom to purchase or sell in the open market. Where this freedom does not exist there can be no market value."

Six States Don't Limit Women's Hours.

In a survey by the woman-in-industry service of the Department of Labor it was found that Indiana is one of six States that has no legislation regulating hours for working women, the other States being Iowa, West Virginia, New Mexico, Florida and Alabama. The survey covered 112 plants, employing over 12,000 women. It is stated that women were working as long as 65 hours a week in a clothing factory, 84 hours in a cannery, 75 hours in a seven-day week manufacturing caskets and 88 hours and 40 minutes in a plant on automobile parts.

The only restriction on the employment of women workers over 18 years of age prohibits employment in manufacturing between the hours of 10 o'clock at night and 6 o'clock in the morning. This makes it possible "for a woman to work in a factory from 6 a. m. until 10 p. m., with one hour for lunch, making a 15-hour work day," or she may work all night in other occupations than manufacturing, such as a bakery or a railroad yard, and yet keep within the law.

The report states that "in the day nurseries of Indianapolis many little children are brought in before 6 a. m. A woman with a family must get her own breakfast and that of her children before she starts for the factory, which is often at a distance from her home. At night there is the dinner to cook, dishes to wash —all this after her day's work."

It is stated that in sixty-one establishments women are subjected to the strain of continuous standing at machines or work tables, and in forty-three plants additional strains on the workers were noted, such as lifting heavy weights, running very fast machines, running unguarded machines and operating levers and foot pedals that require "considerable strength to manipulate."

Butte is now said to be not only the sheepshearers' headquarters of Montana, but of the Western hemisphere. Recently it was world headquarters of an international convention, and the Butte Sheepshearers' Union entertained ninety delegates from all parts of the world, even Australia and New Zealand being well represented.

According to data compiled by a London statistician, German submarine warfare has deprived Norway of 150,297 tons more of shipping than the tonnage of the entire Swedish fleet at the beginning of the war.

THE LEAGUE OF NATIONS.

(By Walter Macarthur.)

The labor movement stands for peace based upon justice in all the relations of men, industrial, social, and political. It stands for peace in international relations as a prerequisite to the establishment and maintenance of peace in the several nations.

Consequently the labor movement stands for a League of Nations, as now proposed, because it sees in the plan of that body the best promise yet given of an international agreement under which disputes shall be settled by the power of reason and in accordance with the judgment of mankind, instead of, as heretofore, by the preponderance of brute strength.

The labor movement, without exception or reservation, has stood loyally for the prosecution of the war. The men and women of that movement, equally with those of every other class, have given of their best, and have not paused to count the cost, in order to insure the triumph of the cause in which the Nation was engaged. They have worked and fought to "make the world safe for democracy." And now, having won the contest in the field, they join with their fellow citizens in every walk of life in the determination that that victory shall be made permanent by the adoption of a system which shall make war, if not impossible, at least avoidable under most circumstances.

The question confronting us is one of organization. Heretofore the world has been organized for war. The peoples have longed for peace but have been driven to war by the so-called "logic of events." All the means of making war were instantly available. It was easy to make war and difficult to preserve peace.

The war machine is a self-starter. The League of Nations will create a machine which will be in effect a self-stopper. It will provide a means by which war may be avoided, thus making possible a realization of the peoples' longings for peace.

We do not look for perfection in the plans now before us for consideration. Naturally the plans are subject to criticism, more or less honest and more or less justifiable. The important thing is that these plans make for a good beginning in the right direction, and as such are entitled to, and doubtless will receive the support of every man and woman who holds the principles of right dealing between nations above any selfish desire for national glory or aggrandizement.

The labor movement is proud to hail as its friend, tried and found true in many a crisis, the man who presides over the destinies of our country. That movement reposes the most implicit confidence in the patriotism and intelligence of Woodrow Wilson. It joins with the world at large in honoring the President of the United States as the spokesman of democracy and the acknowledged leader of mankind in its march toward a new and better era in the affairs of the world.

As we have supported our President in the great tasks of the war, so we now support him in the greater task of making peace, peace based upon the principles of justice, peace not for to-day alone but for all time.

A DISASTROUS YEAR.

The year 1918 was almost a hoodoo twelve months for vessels well known on the Pacific Coast. Many steam, sailing and motor-driven craft were lost during the year, according to the statistics compiled by Abe Marks of the Marine department of the San Francisco Chamber of Commerce.

Among the passengers and freight carriers recorded as lost last year were the following:

Motor-ship Portland, with 1,503,000 feet of lumber, from Bellingham to Antofagasta, destroyed by fire.

Schooner Mahukona, while towing out from Apia, Samoa, with a cargo of copra, bound for San Francisco, drifted on a reef when tow line parted.

Steamship Umatilla, from Seattle for Singapore, went ashore at Imboyesaka. Many attempts were made to float the vessel, but without success.

Schooner Bertha Dolbeer, bound from San Francisco for Wellington, N. Z., never heard from. A ship's boat drifted ashore near Napier, N. Z.

Schooner James H. Bruce, bound from Eureka for Newcastle, Australia, wrecked on Beveridge reef, Nicholson's island, with 750,000 feet of lumber aboard.

Barkentine Koko Head, from Capetown, for Manila with coal cargo, destroyed by fire 180 miles west of Java heads.

Steamship Westerly, from Seattle for France, sunk off the French coast in collision.

Ship Tacoma, San Francisco for Bristol bay, sunk by ice pack in Bristol bay.

Schooner Expansion, from San Francisco, for Suva, stranded at Suva.

Steamship F. A. Kilburn, formerly on the Eureka-San Francisco run, destroyed by fire at sea while being operated out of New Orleans.

Steamship Ravalli, from Seattle for Southeastern Alaska, lost on the shores of Lowe inlet, Greenville channel, Alaska.

Schooner Crescent, from Sydney for San Francisco with copra cargo. destroyed by fire at sea.

Steamship Rosalie, operated on Puget sound, burned to water's edge in Duwamish waterway.

Schooner Annie Larsen, from Hilo for Papeete, wrecked on Malden island.

Bark John Murray, from San Francisco for Melbourne, wrecked on Malden island.

Steamship Mary Olsen, with 1000 tons of coal aboard, destroyed by fire at Cienfuegos.

Steamship Luz Blanco, sunk off Halifax by submarine.

Schooner A. M. Baxter, from Suva, for San Francisco, with copra cargo, went ashore outside Suva.

Motor-ship Madrugada, New York, for Santos, sunk by shell fire from submarine.

Schooner Ethel Zane, San Francisco for Manila, abandoned near Island of Guam. Vessel foundered in typhoon.

Steamship Coos Bay, from San Francisco for nitrate ports, abandoned in sinking condition off coast of Mexico.

Ship Star of Poland, Manila for San Francisco, went ashore and was wrecked on coast of Katsuar Chiba, Japan.

Steamship Blackford, Seattle by way of San Francisco for Chilean port, with cargo of coal, abandoned in sinking condition 250 miles south of Magdalena bay.

Steamer Newburg, San Francisco for Jenner Landing, went ashore north of whistling buoy at Bodega.

Steamship Breakwater, wrecked off Zopotitlan, thirty miles north of Coatzacoalco.

Steamship San Gabriel, San Francisco for La Paz, never heard from, supposed to have foundered in a hurricane.

Steamship Princess Sophie, Skagway for Victoria, wrecked on Vanderbilt reef in Lynn canal.

Steamship Dumaru, San Francisco for Manila, by way of Honolulu, struck by lightning and destroyed by fire.

Steamship Mandalay, Crescent City for San Francisco, went ashore near Crescent City.

Ship A. J. Fuller, with cargo of salmon, sunk near Seattle by being run into by Japanese steamship Mexico Maru.

Motor-ship Ethel, from Santiago for Norfolk, with cargo of ore, lost off the coast of Cuba.

Barge Wallacut, in tow from Port Gamble to San Francisco, in attempting to cross Coos bay bar the hawser parted, and barge drifted ashore, with 800,000 feet of lumber.

Power schooner Illwaco, on fishing cruise, wrecked four miles north of Green island, B. C.

Steamship West Land, sunk in Atlantic by submarine.

Steamer Benito Juarez, from San Francisco for Manila, foundered in a gale forty miles northeast of Molokai channel.

Motor-ship Remittent, Pensacola for Valparaiso, sunk off Cape Gracias.

Motor-ship Stasia, burned to water's edge at Shanghai.

Ship Aryan, Wellington for San Francisco, burned at sea, 300 miles east of Chatham island.

Steamship Quantico, wrecked on Tablas island.

Steamship George Loomis, San Francisco for Coos Bay, with oil cargo, never heard from. Ship's boat picked up by passing steamer.

Steamship Iaqua, running out of New Orleans, burned at sea off the coast of Nicaragua.

ARTISTIC SEASICKNESS.

First Artist: "I received a magnificent tribute to my skill the other day at the exhibition."

Second Artist: "Indeed! What was it?"

First Artist: "You know the picture, 'A Storm at Sea'? Well, a man and his wife were looking at it and I overheard the fellow say, 'Come away, my dear; that picture makes me sick.'"

The union label is a competent and impartial record of aims and purposes. It is to a large extent a restraint on the trusts, for every purchase which goes with it, every label which bears the significant words, "eight hours," means employment to more men. It is the very acme of union co-operation.

"Let me repeat it, co-operation is a political training school quite as much as it is a training school in more decent business methods."—Professor John Graham Brooks: "Next Step in Political Reform."

Labor News

Negroes in Houston, Texas, are accepting the trade union theory and well-attended meetings are being held by the workers.

As a result of the back-to-school drive conducted by the children's bureau of the Department of Labor it has been discovered that 10,895 Texas children failed to enroll in any school last year.

A reduction in wages of $1 per day in the Butte District, and $.75 a day in Utah and Arizona mining districts have resulted in serious strikes in Butte, Montana, and Jerome, Arizona.

Five and 10 cent stores throughout this country, which usually pay starvation wages to the female employees, netted a surplus last year of $4,981,507 for the F. W. Woolworth company.

Organized street car men of Dayton, Ohio, have received nearly $60,000 in back pay, this being the amount of the increased wage they earned between June 24, when they returned to work after the strike, and October 24, when the award was made by the National War Labor Board.

President Farrington of the Illinois district, United Mine Workers, has ruled that locals can levy assessments for the support of co-operative movements providing the laws governing the levying of assessments are complied with. It is held that this levy is legal because "the international and district organizations in convention have indorsed the co-operative movement."

The altruism of John D Rockefeller, Jr., is doubted by Timothy Healy, international president of the Brotherhood of Stationary Firemen and Oilers. Mr. Rockefeller is given much publicity because of his talk about the "republic of labor" but in a New York newspaper President Healy says Mr. Rockefeller has "wiped out" locals of the Stationary Firemen's union in Bayonne, N. J.; Point Breeze, Pa.; Greenpoint, N. Y.; Whiting, Ind.; Port Richmond, Ind., and other places.

The Minnesota State Federation of Labor is giving wide circulation to the labor portion of Governor Burnquist's annual message. One of the Executive's recommendations is that the "vagrancy laws" include "dangerous agitators" who stir up strife and preach doctrines of discontent. The Governor also wants trade unions incorporated, is opposed to State-controlled workmen's compensation insurance and favors a State Constabulary. As far as labor is concerned, the message is a model for reaction.

President Evans of the International Association of Oil Field, Gas Well and Refinery Workers, says that eighteen years ago oil in the Louisiana and Gulf Coast Fields was selling for 30 cents a barrel and the workers received $3 a day. To-day oil in these fields is selling for $1.50 a barrel and the workers receive $4 to $4.77 for 8 ten and twelve hour days. "The oil field workers in this district," says President Evans, "have been waiting for eighteen years without the operators showing any interest in their civic, social or sanitary condition. Is it not a bit peculiar that the operators should manifest so real interest in the welfare of the workers at a time when the International Association of Oil Field [illegible] strikes."

You Want the Truth

This year there will be stirring times in the Nation. Under government censorship it is increasingly difficult for the average man to get the real meaning of the social and political movements of the day.

LA FOLLETTE'S MAGAZINE

will be specially represented at Washington and will analyze and present the news from the capital truthfully and fairly. Senator La Follette is making a real fight to lift some of the tax burdens from the common people and place them where they belong — on excess profits, war profits and surplus fortunes and incomes. Because of this he is being attacked more bitterly than any other men in public life.

Send in your order today.

$1.00 Per Year—Agents Wanted

INFORMATION WANTED.

The salvage case of S. S. "Princeton" which salvaged the S. S. "Ardmore," both vessels owned by Standard Oil Company of New Jersey, has been tried and resulted in an award of $7,500 to the crew. This amount has been received, and members of the crew of S. S. "Princeton" are requested to call for same at the offices of Mr. Axtell, One Broadway, New York, N. Y.

For the benefit of the widow of John Karus, lost at sea, October 17, 1918, at 2:15 a. m., according to the report in the official log of the barkentine "Aurora," will all members of the crew of that vessel who know anything about the ship, the condition of her rigging, before and after the accident, or anything that will tend to explain his disappearance, communicate with the undersigned attorney for the widow?—Silas Blake Axtell, No. 1 Broadway, New York City. 1-1-19

Ellis R. Nelson, last heard from at New Orleans, La., Nov., 1916, when on board U. S. C. G. S. S. "Davy," is inquired for by his mother. Anyone knowing his whereabouts will kindly communicate with R. J. Nelson, 59 Clay St., San Francisco, Cal. 11-6-18

When making purchases from our advertisers, always mention The Seamen's Journal.

Discusses the "bread and butter question" from the standpoint of the worker
• • •
League President, Judge James M. Rea, Savannah, Mo.; Vice-Pres., Kenneth B. Elliman, Boston, Mass.; Treasurer, Herman Cohn, Seattle, Wash.; Secretary, W. E. Brokaw, Longbranch, Wash.

INFORMATION WANTED.

Members of the crew of the S. S. "Fred W. Whellen" who were on board November 11, 1918, when she picked up the bark "Galica" should file their claims with this office and be joined in libel which is being filed by the undersigned on behalf of the members of the crew. Silas B. Axtell, 1 Broadway, New York City. 12-25-18

Home News

In the Senate an attempt by Senator Borah to repeal by amendment certain sections of the Espionage law giving authority to the Postmaster-General to exercise censorship over mail matter was voted down by a 39 to 25 vote.

Two bills have been proposed to the New York Legislature at Albany, looking to the return to the convention as a nominating medium for State officers, instead of the primary system, which has not proved satisfactory to the politicians.

Practically without debate the North Dakota Legislature has ratified the seven Nonpartisan League amendments to the State constitution which were voted upon at the last general election. By their final ratification the amendments become part of the State constitution, and will permit the Nonpartisan League to carry into effect its whole program of State-owned elevators, flour mills, coal mines, packing plants, etc.

Following the example of the older States in the suffrage line, Michigan had the experience of a woman jury. The case before it was one of intoxication. Two juries composed of men had heard the testimony and failed to agree. It is said the woman's jury was impaneled as a last resort. The women seized upon the facts and dealt with them summarily, and in twenty minutes returned the verdict of guilty.

During the Senate debate on the $100,000,000 food appropriation for starving Europeans, Senator Gore said that D. W. Taliaferro, vice-president of the Hammond-Standish Packing Company of Detroit, in testifying before the Committee on Agriculture, "innocently told us that this $100,000,000 or a great deal of it was to be used in stabilizing the price of packing house products so that the packers could dispose of the stocks they had on hand and obviate a loss."

An act has been proposed to the General Assembly of Connecticut to exempt all products of labor from taxation. The tax upon land is to be increased until its speculative holding out of use will be rendered unprofitable, and the sources of all wealth become accessible to every inhabitant under conditions of democratic equality. All property other than land, taxable October 1, 1920, shall be set in the tax list at 80 per cent. of its actual value. This per centum shall be reduced one-fourth October 1, 1921, and one-half October 1, 1922, three-fourths October 1, 1923, and October 1, 1924, all taxation aside from that on land is to cease altogether.

Secretary Lane of the Department of the Interior has submitted to the House Appropriations Committee a request for $200,000 to be spent in making a special investigation in respect of the power supply of the industrial region between Boston and the city of Washington. The investigation is to be the basis of a constructive national policy in reference to power supply, which has grown enormously throughout the country since the beginning of the war. In the region between Boston and Washington there is power-producing machinery capable of 8,500,000 horsepower. This equipment increases from 500,000 to 1,000,000 horsepower annually.

The Board of Health Claims the Spanish Influenza Epidemic is Liable to Break Out Anew

Preventive measures against "THREE DAY FEVER," "THE FLU," "THE GRIP."

Keep away from the cougher, sneezer or spitter who does not use a handkerchief.

Keep out of crowds whenever possible.

Don't use dishes or towels which have been used by others until they have been washed in boiling water.

Don't put your lips against the telephone mouthpiece and don't put into your mouth pencil or any other article that has been used by another.

Keep in the fresh air and sunlight as much as possible and wear sufficient clothing to keep warm.

Sleep in a well-ventilated room under plenty of bed clothes.

Walk instead of using the street car whenever your journey is a short one.

Be temperate in eating and observe the ordinary rules of hygiene.

Wash your hands and face immediately upon reaching your home and change your clothes if possible before mingling with the rest of the family.

Keep your bowels in good order. It is very essential that this last order be carried out. If necessary use a good laxative such as laxcarin.

CURATIVE MEASURES.

Go to bed upon the first indication of illness and call a doctor.

Take a good laxative—two laxcarin tablets if necessary.

The sick person should have a room by himself.

Care should be taken to have the sick person cough, sneeze or expectorate in gauze or tissue paper, which should be burned at once. Persons handling this gauze or tissue paper should wash their hands after each attention.

Patent medicines should be avoided. Nothing but a good laxative should be taken before the doctor arrives. Take a laxcarin tablet.

The patient's room should be kept well ventilated; care should be taken that no draft strikes him.

Visitors should be kept from the sick room.

The patient should remain in bed long enough after the fever has subsided so that he will be in no danger of an attack of pneumonia.

The bowels must be kept working—use Laxcarin.

***LAXCARIN is sold by the* LAXCARIN PRODUCTS CO.**

Price per Box, One Dollar
Full Treatment, Six Boxes, Five Dollars
Will be sent post paid upon receipt of Cash, Money Orders or Stamps
Substitutes Must be Refused

DEPARTMENT E-99 **PITTSBURGH, PA.**

Domestic and Naval

The Greek steamer "Tharros," ex "Netherby Hall," 3,316 tons gross, 2,139 net, built at Greenock in 1890 and owned by Aristides Milonas, Chios, has been sold for about £185,000.

The growth of the "Isherwood" System still goes on with great rapidity, and although the returns up to date show that since the end of 1917 no less than 250 vessels, aggregating in dead-weight carrying capacity 2,500,000 tons, have been contracted for, it is believed that a good many more have been arranged for during the past few months, particularly in this country.

Liners which have been in the British Admiralty service as auxiliary cruisers, patrols, transports, etc., are being released in considerable numbers, and already there is a large tonnage of shipping of this class in the hands of British builders for reconstruction and restoration to their pre-war condition. As these ships were all of the high-class passenger type, the work of reconstruction will in some cases occupy months. The owners are adopting the policy of sending the vessels to the firms which built them.

The American Merchant Marine Insurance Company of New York, which recently took over the outstanding American business of the Prussian National Insurance Company, of Stettin, through agreement with the Alien Property Custodian, has increased its capital from $300,000 to $400,000. This company, which was organized in 1916, will now operate a fire branch. It was heretofore a strictly marine company and it is believed that the fire branch will probably be run in collaboration with the fire branch of the United British Insurance Company, Ltd., of which C. P. Stewart & Co. are United States managers.

The Atlantic Corporation, of Maine, has brought suit against the Emergency Fleet Corporation to annul a contract to build ten steel ships. The Atlantic Corporation took over the old paper mill on the Piscatauqua River at Portsmouth and converted it into a shipyard for the purpose of carrying out this contract, which was to build ten 8800-ton steel ships at the fixed rate of $160 per ton, d. w. It is alleged in the suit that the carrying out of the contract would ruin the company. Attachments have been placed by creditors on six hulls in construction at the yard. The outstanding indebtedness of the company is said to amount to $609,000.

A good story is being told of some "enterprising" members of a New York shipping firm who "put one over" on the selling agents of two famous makes of cars. In order to supply themselves with the outward signs of prosperity, these particular shipping men—who are connected with a line of the "mushroom" description—placed an order for export, which made the price of the cars only about one-half of the regular price. The cars were delivered crated at the pier rented by that firm, where they were taken out and run up to various garages. It is also said that, not satisfied with obtaining cheaply the outward signs of prosperity in this manner, these enterprising men also replace worn-out tires with new ones obtained in the same fashion.

News from Abroad

In the zone of occupation on the Rhine the Americans with the other Allies are doing their best to restore a normal economic situation and are finding occupation for the unemployed Germans.

Advices from Copenhagen recently gave the information that a Soviet commission was passing through that city on the way to America, with the purpose of buying agricultural machinery of the value of 40,000,000 rubles.

It is announced that the Royal Belgian Lloyd has purchased in Great Britain steamers of a total tonnage of 200,000. The same company is purchasing new tonnage in the United States, a sum of $40,000,000 having been provided for that purpose.

Germany could pay an annual indemnity, according to John J. Arnold, the Chicago banker, of $3,500,000,000, by means of a tax on her raw materials. Her coal deposits alone amount to more than 300,000,000,000 tons, without counting those of Alsace-Lorraine.

The Amsterdam Handelsblad states that besides sixty British merchant ships which are to be repaired at Rotterdam, British merchant vessels will also go to Amsterdam to be repaired at the works of the Dutch Shipbuilding Company. The requisite material will be sent from England.

The Japanese steamship "Atsuta Maru No. 1," 4,100 tons dw., built last year for Messrs. Sato & Co., has been sold to the Taiyo Kaiun Kaisha at 525 yen per ton. The Aichi Kisen Kaisha, of Kobe, has bought the "Hakata Maru XI.," 800 tons, for 385,000 yen. The steamship "Mansei Maru," 3,100 tons, has been sold by the Sajhalien Steamship Company to the Kuhara Company at 630 yen per ton.

The new head of the Hamburg-American Line who has been chosen to replace the late Albert Ballin, whose death is still shrouded in mystery, is Dr. Wilhelm Cuno, who was born in 1876 and has been a Government official in the Finance Department since 1907. During the war he was engaged principally in food supply. His appointment to the Hamburg-American Line dates from November 1 last.

Mr. Bernard A. Rosenblatt, member of the national executive committee and president of the Zion Commonwealth, is in London to attend the inter-allied Zionist conference. Mr. Rosenblatt will submit to the conference a memorandum on land value taxation in Palestine and will make preparatory arrangements for establishing branches of the Zion Commonwealth in other countries. It is understood in Zionist circles that he will also take steps toward the purchasing of land in Palestine for the Zion Commonwealth.

The share of work performed by women in British shipyards is said to have been greatly exaggerated. It is not expected that women discharged from munition plants will be engaged in large numbers in the shipyards, and it is considered doubtful that more than a small number of women can ever find work in shipyards and marine engineering shops. They have been tried on the Clyde during the war, and it has been found that, while they are quite satisfactory as workers, the number of jobs suitable for them is so small that very few of them can be employed.

With the Wits

"Who's going to win?"

"Why, the Allies, you nut!"

"But I mean the governorship."

"Let's see, now—who's running?"—Buffalo Express.

He—My ideal of a wife is one who can make good bread.

She—My ideal of a husband is one who can raise the dough in the hour of knead.—People's Home Journal.

"What has become of the greyhound you had?" "Killed himself." "Really?" "Yes, tried to catch a fly on the small of his back and miscalculated. Bit himself in two."—Tit-Bits.

"Have you read the war news today?"

"Not all of it. Got so much war work to do that I haven't had time yet to enjoy myself reading about it."—Washington Star.

"That was a great shot you just made," said a golfer.

"I wish I knew how you did it."

"So do I," replied the player, who was at least honest, and knew that it was an accident.—Detroit Free Press.

"Well, here's one benefit from the war. The burglars and strong-arm men have been draited, and there isn't so much danger of being held up."

"Evidently you haven't eaten in a restaurant lately."—Life.

"The coal situation doesn't worry me. I've managed to get four tons."

"But surely you don't expect four tons to last you all winter."

"Yes, I do. The hired man who runs my furnace used to be janitor of a city flat."—Boston Transcript.

"My sister Maggie is a very fortunate girl." "Yes? Why?" "Dunno. But she went to a party last night and played blind man's bluff all the evening. The gentlemen hunt around and find a girl, and then they must either kiss her or give her a shilling." "Yes?" "Maggie came home with thirty shillings and a war bond."—Tit-Bits.

Union Made

Taylor's Nautical Academy

Established 1888

Consular Building, Corner Washington and Battery Streets, Opposite New Custom House, San Francisco, Cal.

THIS OLD AND NOTEWORTHY SCHOOL is under the direct and personal supervision of CAPTAIN HENRY TAYLOR and equipped with all modern appliances to illustrate and teach any branch of Navigation.

The class of teachers of Navigation in the past have been those having simply a knowledge of Navigation, and Navigation only. Conditions have changed, and the American seamen demand a man as a teacher with higher attainments than one who has only the limited ability of a seaman. The Principal of this School, keeping this always in view, studied several years the Maritime Law, and is now, in addition to being a thorough teacher of Navigation and its kindred subjects, a regularly admitted Member of the Bar.

There is no standard of education required of a pupil entering the School, for no matter how ignorant the seaman may be, even in the rudiments of common education, Captain Henry Taylor will teach and raise him from the depths of ignorance to the height of the average well-informed man, and in a comparatively short interval of time.

THE BERNE LABOR CONFERENCE

Reasons Why A. F. of L. Delegates Refused to Attend

That all is not smooth sailing between the principal American and Allied Labor representatives in Europe has been evident for some time past.

Those who have tried to keep in touch with the situation will find much instructive information in the article published herewith. The story is supplied by the American Alliance for Labor and Democracy through its Paris representatives. It is believed to be the first complete and comprehensive statement printed in this country of the reasons which prompted the representatives of American labor to hold aloof from the so-called international Socialist and labor conference at Berne, Switzerland. The American delegation includes Samuel Gompers, president, and the following vice-presidents of the American Federation of Labor: James Duncan, president, Granite Cutters' International; William Green, secretary-treasurer, United Mine Workers; John R. Alpine, president, Plumbers' and Steamfitters' International, and Frank Duffy, vice-president, United Brotherhood of Carpenters and joiners.

Owing to the distance between America and Europe, and there not having been a united program between representatives of organized labor in continental Europe and Great Britain, detailed correspondence with reference to united procedure of all parties concerned at the present time was next to impossible. For these reasons the delegation representing organized labor in America went to London and to Paris to enter into preliminary conferences with other groups of labor representatives to bring about an allied convention at Paris.

At a labor meeting held in London in September, 1918, an agreement was reached that as soon as possible after peace was declared in Europe there should be a conference called of the labor representatives of the inter-allied countries and America, to be convened at the same time and place as the official Peace Conference. A group of men principally interested in their several political parties arranged for a conference at Berne, Switzerland, and at the same time assumed to call, without authority, a labor convention to be held at Berne concurrently with the political convention.

This situation becoming known to the American labor delegation, the members of it sought a conference with the representatives of organized labor of Great Britain in London and invited the French labor representatives to also attend. In this way the American delegates expected to bring about a convention at Paris, where the official Peace Conference is now in session, which action would not only be in accord with the decision reached at London last September, but in full accord with the action of the American Federation of Labor at several conventions in which it was decided to send representatives at the same time and place as the official Peace Commissioners would be in session.

This action, as well as the decision of the London convention last September, was primarily and chiefly prearranged in order to bring all possible influence upon the Peace Commissioners and, in a general way, to incorporate in their conclusions conditions representative of organized labor which it was expected would be of benefit, not only to the workers in the allied countries and in America, but also similarly to all the workers throughout Europe, and in a very great measure thereby influencing progressive and just policies to all the workers of the world.

A conference was held in London between the American delegates and the Parliamentary Committee of the British Trades Union Congress at which information was given that the French labor representatives above referred to deemed it not necessary for them to visit the London conference, because the American and British labor representatives would be immediately in France and at Paris, at which time the conference which had been suggested to be held in London could be convened, perhaps informally, but with the hope of arriving at a course of procedure which would be mutually satisfactory to organized labor as represented by the three groups of delegates.

Several conferences were held at Paris, but owing to some misunderstanding about when the Paris conference would be held the British representatives did not attend. Instead they sent a letter indicating their friendliness to the purposes of the meetings. At the London and Paris conferences it was evident that the British and French representatives had already concluded to attend the Berne conference above referred to, although admitting the irregular course pursued in calling it.

The American delegation thus ascertained that the purpose of meeting at Berne was because delegates from the countries of the Central Powers had been invited and would also be present, and that the main reason for meeting at Berne was for the purpose of arranging Socialist procedure of an international character. Berne had been selected as the place of meeting owing to peace terms not yet being prepared and signed, and it would not therefore have been diplomatically proper nor advisable to have had German, Austrian and Bulgarian delegates at a meeting held in Paris. In addition to this the American delegation considered that if such a convention hoped to have influence with the official Peace Commissioners now in session at Paris that purpose would not be enhanced, in fact, might largely be hampered, if labor conditions and provisions were submitted to them in which labor delegates representing the countries which had composed the Central Powers in the war participated, for it would have been obvious that the proposals submitted were largely "German-made."

The Berne conference was originally proposed as conferences of citizens of the allied countries. By a device that we cannot approve this purpose was covertly altered so as to include delegates of the nations with which our countries were and technically are still at war. While, therefore, the official Peace Conference is in session and before it has admitted to participation therein representatives of the Teutonic powers, it was proposed that we should sit side by side and face to face with such representatives, call them comrades and in this public way condone the hideous and unforgettable crimes against humanity and democracy committed by their nations. This, for the present, we declined to do.

The peace deliberations are based upon the program of meeting delegates from the Central Powers only after the Allies and the United States have agreed among themselves and are in accord as to the terms to be insisted upon at the peace table. The Commissions representing the Allies and the United States and the other countries interested are now in session in Paris, and it would seem to be the logical course, and we are so instructed by several conventions of the American Federation of Labor, to present labor's demands at this time and place. Labor of the Central Empires has the same equal right to present their demands to the Commission which will represent them at the peace table.

Had we overlooked the irregular manner of calling the Berne conference and the fact that it is called to be held in a neutral, instead of an allied country, and decided to go to Berne, where would the Commissions of the Allies and the United States get a truly bona fide statement of the Allied and American labor demands? We declare the Berne conference to be irregular in conception and we can conceive of no good which would result from our attendance.

For these reasons the American labor delegation concluded not to participate in the Berne conventions. The Belgian labor delegation also concluded not to attend. In order, however, to be as useful and as constructive as possible, the American delegation proposed that a convention be yet held in Paris at the earliest possible date of the labor delegation from America and representatives of organized labor of the allied countries.

This was approved by the Belgian delegates and may yet be held, for there is nothing the representatives of organized labor of America and of the Allies need to go to a neutral country to discuss. Besides, such action would be, as already stated, in accordance with the original course mapped out. This would also afford opportunity from time to time to take action while such a convention was in session in Paris to present to the official Peace Commissioners at close range the deliberations of the inter-allied delegates thus in session at Paris.

The delegation from America is not entirely opposed to going into conference with dele-

gates from the countries of the Central Powers, but they believe the present is not an appropriate time to do so, and that when the Peace Commissioners have so far proceeded with their deliberations that they can invite the representatives of the Central Powers to sit with them and to sign the terms would instead be the opportune time, or as soon thereafter as possible, to hold a great general labor convention for the purpose of a better understanding and for arranging methods of procedure which would be of benefit, not only throughout America and Europe, but to the whole world.

For the present the American delegates prefer to officially meet and transact business with representatives of labor from the countries which had to defend themselves against the ruthlessness of imperial Germany, and in which inhuman procedure there is ample evidence of the Socialist and labor representatives, particularly of Germany, having almost unitedly supported the German war activities and atrocities. The American proposition to hold an inter-allied conference of the representatives of organized labor is now before groups of union representatives of the Allied countries, and it is hoped and expected that as soon as a full interchange of views has taken place among the representatives of these countries, the proposition of the American delegation will be accepted.

In the meantime, in accordance with the action of the American Federation of Labor, its delegates now in Paris will hold conferences from time to time with the official Peace Commissioners of America for the purposes of general understanding and so that, through these commissioners the essential and progressive principles of organized labor will be fully submitted to the official Peace Conference.

DRIFTING MINES.

It is stated that twenty-five mines were sighted by a steamer recently off the Atlantic coast. There will probably be many floating mines for months to come and doubtless some marine accidents will result. Of course, measures will be taken to pick up and destroy these menaces to navigation, but it is almost impossible that all should be found, and ship captains must run a certain degree of risk. After the Russo-Japanese war ships were sunk for a long time after the cessation of hostilities, as mines were carried out into the Pacific, some of them torn from their moorings and others being drifting mines. It is not known how many free mines the Germans set afloat, but it is believed a great number were thus started forth on missions of destruction. Fortunately the trend of currents in the North sea is into the Gulf stream, flowing toward Spitzbergen. There is a return current west of Iceland which might bring mines back by the Labrador current into the navigation zone between the Gulf stream and the coasts of Newfoundland, Nova Scotia and North-eastern United States, which is the principal steamer lane. Mines that chance to work their way through the English Channel might get down into the Canaries current and so flow into the Gulf stream from the south. Were the current conditions otherwise than they are, the danger from this source would be extremely grave. Mine sweeping must be continued with unremitting diligence until the seas are made safe again.—Washington Star.

"Democracy means co-operation. It means the people trusting themselves, believing in themselves, organizing for their own benefit, getting for themselves all the benefit of concentration and efficiency."—Dr. Frank Crane.

When we are inclined to be impatient of the small-mindedness that sometimes crops up in the labor movement we should reflect that, after all, the fact is a compliment to the intensely human character of the institution.

THE CHANNEL TUNNEL.

Those among our readers who may have assumed that the project for a tunnel between England and France was dead, or at least moribund for the period of the war, will be undeceived by reading General Francis V. Greene's presentation of the matter in the current number of the Yale Review.

It is well understood that the French Government has always been in favor of the project, and while the latest utterance of the British Government on the subject, made on August 16, 1917, was to the effect that "it is not practicable to proceed further in the matter during the continuance of the war," yet the press of both London and Paris during the past year has taken the opposite view and General Greene thinks there is reason to believe that the only objection on the part of the British Government at the present time is the difficulty of finding the money and the labor.

American engineers and contractors, according to General Greene, have studied the problem and are convinced of its feasibility. It has even been seriously proposed that the United States Government itself should undertake the work, with the consent, of course, of the British and French Governments.

The engineering proposition in its present stage is this: To construct under the English Channel two tunnels of approximately the same size and character as those of the Pennsylvania Railroad which extend under the Hudson River, Manhattan Island, and the East River; and to use them for transportation of passengers and freight without changing cars or breaking bulk.

The geological conditions at the Straits of Dover are declared by General Greene to be more favorable than under the Hudson and East rivers. Most eminent geologists and engineers of Great Britain and the United States have studied them thoroughly for many years. In the narrowest part of the Channel the maximum depth is about 160 feet, and the bed or bottom is a stratum of gray chalk about 200 feet thick and impervious to water. The tunnel will be in this chalk from shore to shore protected from submarines and mines by more than 100 feet of rock and the water above it.

The rock is as soft as soapstone, and while impervious to water it can be excavated very rapidly and without blasting by cutting, sawing, or scraping machines. It will be readily understood from this that construction difficulties are much less serious than in the tunnels under the Hudson and East rivers.

It is proposed that the two tunnels, each eighteen feet in internal diameter, shall be lined with cast iron and concrete and connected with the railways of France and Belgium at a point midway between Calais and Boulogne, and with the English railways at a point near Dover. The total length of each line is thirty-seven miles, of which thirty-two miles are in tunnel and twenty-four miles under water. The rails at the lowest point are 325 feet below water level. The maximum grade for a short distance is ninety-five feet per mile. The prevailing grade is twenty-six feet per mile.

The estimate of six years and a half for completion was based on tunneling experience prior to 1882, but American engineers think that with modern methods of cutting and handling the material, this can be reduced to perhaps less than four years. The total cost has been estimated at $80,000,000, but that figure was reached in 1913 and there are no estimates available based on present conditions.

COPENHAGEN'S HARBOR.

Since the war began, and especially last year, the work of extending Copenhagen's harbor has been going on with nervous haste. Understanding that great future possibilities are here, everything has been done to improve both the freeport and the old harbor, so that they will be able to take care of the increased traffic that is expected. A trip through the harbor shows that the work is going on at full speed and incidentally creating new land and new enterprises. The extension comprises 170 acres. One thousand laborers are employed daily. The extension of the freeport, which is almost finished, comprises a new basin 31 feet deep, 390 feet wide, and 2000 feet long, with an aggregate length of quay 3500 feet—in all, 31 acres of land and 22 acres of water area. A further extension of 81 acres is now taking place toward the north, and the freeport will then be between 30 and 50 per cent. larger than formerly.

The jetty north of the freeport is mainly intended for storing of fuel oils which are pumped from the ships into tanks on the grounds. The East Asiatic Co. has already built two tanks. On the farthest point of the jetty the Great Northern Telegraph Co. has a cable depot.

By the extension of Kalkbraenderi Harbor, a land area of 13 acres has been gained with 2100 feet of new quay. The depth has been increased to 21 feet, and an independent northern entrance to the harbor has thereby been made. It is the intention to use the west side of this harbor for timber, and the east quays for coal import.

The work of digging and filling out all the harbor extensions to the north involves 45,000,000 cubic feet. To the south, the digging out of Frederiksholms Teglvaerkers (brickworks) clay pit to form a harbor basin was commenced in 1916. Back of this harbor there are large areas for industrial use, and for this purpose the harbor authorities have filled out an area of 17 acres of land on which the Baltica shipyards already have been built. Kobenhavns Flydedok (shipyards) are also building large shipyards out there.

On Enghave wharf the building of a large coal quay was begun last January, and a 21 feet deep channel for use of the municipality's large new electric works. This quay is now being extended 350 feet farther north, and will then be 1056 feet long.

All the works here mentioned will be finished this spring. The total cost will be about $1,600,000.—From "Politiken."

Demand the union label upon all purchases!

WEEKLY NEWS LETTER

Contributed by American Federation of Labor

Pleads For Free Press.

In defending his position that the founders of our country never intended to interfere with a free press Senator Borah made this statement in the United States Senate, while urging a curtail of the censorial power of the Postmaster General:

"There is no proposition better established as an historic fact than the belief in the minds of the framers of the Constitution of the United States that they gave no power whatever to Congress to deal with the subject matter of the freedom of the press or of free speech. It was undoubtedly their belief that that was a matter which was left alone and exclusively to the States. That was the opinion as expressed by the men in the convention; it was the opinion of Mr. Hamilton and Mr. Madison, the principal authors of the Federalist; and it was repeatedly stated in the debates in the different State conventions with reference to the ratification of the Constitution. When the question was raised in the constitutional convention that there ought to be something more expressive with reference to the power of Congress prohibiting the Congress from dealing with the subject, it was stated upon the floor of the convention that it could not be necessary because no power was given to the National Congress or to the National Government to deal with it in any way.

"I do not care how many Bolsheviki or who advocates the repeal of this law; it does not modify my position either with reference to advocating this or with reference to making me more zealous one way or the other. I simply know, as Mr. Madison says, that while there may be evils connected with the complete freedom of the press, they are infinitely small and of infinitely inconsequential effects as compared with the evil of a censored press."

Labor Exchanges Urged.

In urging labor exchanges as part of our national program the United States Employment Service says:

"The operation of employment offices is universally recognized as a public function. Private agencies operating on a fee basis have stimulated unemployment and increased turnover, besides taking millions of dollars out of the wage earners of the country.

"England, with one-twenty-fifth of our territory and one-half of our population, has approximately 1,500 exchanges and agencies. When it is considered that New York city alone has 600 private agencies, it would seem that 1,500 offices eventually in the United States will not be an unreasonable number. Expenditures for such agencies are an investment in industrial peace.

"Employment offices must be labor exchanges rather than simply unemployment offices. They must secure a pooling insofar as is practicable of all job opportunities and applications in the community.

"There must be no drifting back to prewar methods of handling unemployment. A well-organized, unified national system of labor exchanges is vitally necessary as a permanent part of our national program."

Probes Labor Unrest.

Reynold's Newspaper is one of Britain's even balanced and liberal newspapers. It ignores wild charges against workers because of present-day social unrest, and rejects the vaporings of space writers, politicians and publicity seekers who discuss this question.

"The simple fact is," says the editor, "that labor is determined to have a far greater share of the wealth in whose production it is the principal means. Not merely higher wages, for higher wages which are balanced by correspondingly higher prices, mean no real change in the position. What labor means to have is a bigger share of what is produced, and that capitalists and landlords shall have a less share. Those classes do not yet seem to have realized this fact.

"When engineers are given more money, or are established at the wages which were said to be temporary, they are told that they must produce more. Yes, but for whom? It is on the answer given to that question that depends what chance there is of industrial peace.

"It is said that labor is unreasonable in its demands; that it wants an unfair share. It may be so. But it looks round and sees quite plainly that manufacturers and importers, middlemen and warehousemen, speculators and dealers have all grown wealthy in such a way as has never been known.

"The way to tackle labor unrest is, first of all, to deal with the regulation of prices in such a way that will strike at the root of profiteering, which latter should be made an extremely unhealthy business."

Federal Legislation Urged by A. F. of L.

In a circular to all national and international unions and all unions affiliated with the A. F. of L., Frank Morrison, secretary of the A. F. of L., urges organized labor to ask their Senators and Congressmen to support the following remedial legislation:

Appropriate funds to complete all public improvements authorized by Congress, which have been postponed because of the war.

Prohibit immigration to this country until the soldiers, sailors and war workers have secured sustaining employment.

Provide a monthly salary for the discharged soldiers and sailors equal to the amount received while in the service, to be continued for a period not to exceed 12 months, if suitable employment is not secured within that time.

Appropriate a sufficient sum of money to purchase land that can be drained, irrigated or stumped, and develop government-owned land in the same manner, this land to be sold to soldiers, sailors, war workers and others on long-term payments, and to provide means whereby loans can be made to each purchaser to erect buildings, purchase necessary machinery and

World's Workers

A scheme for a joint industrial council for the British printing trade has been provisionally drafted, and it is anticipated will shortly be adopted.

A Transport Workers' Federation is reported to have been launched in Sydney, N. S. W. The new organization will embrace unions with a total membership of over $42,000. The unions include the Federated Ship Painters' and Dockers' Union, Waterside Workers' Federation, Federated Seamen's Union, Federated Carters and Drivers' Union, Federated Marine Stewards and Pantrymen's Union, Marine Cooks, Butchers and Bakers' Union, and the Newcastle Coal Trimmers' Association. The Coal Lumpers' Union has not yet joined forces with the new organization, but it is stated that that body is seriously considering the matter.

The following paragraph from the first page of the current Australian "Worker" of Sydney indicates the trend of the times in that country: "Already some of the renegades are regretting the step they took in opposing the decisions of official Labor during the conscription campaigns. Styles (late Chief Secretary in the Vaughan Labor Ministry in South Australia) and Dankel (late Federal member for Boothbay), both of whom supported conscription, have since made application to be readmitted to the ranks of the Labor Party. They were informed that they were not wanted. Today neither has a seat in Parliament, nor are they ever likely to feel the alluring cushions again."

A bit of news from Calgary, Canada, ought to be interesting to the critics of the co-operative movement. In the Drumheller valley is a company of thirty-five miners, every one of whom works in the mine, including the president. It was capitalized out of their own savings. Most of the miners are married. The output of the mine is now a car and a half a day, but the miners are looking forward in the near future, when the mine reaches capacity production, to the building of model homes and the establishment of schools and hospitals. Its coal is sold in Calgary at $6.95 a ton. Lump coal of the first grade is sold at the mine at $3.75. They expect to sell coal much cheaper and to pay higher wages.

The British Government Bill for the restoration of trade-union customs and regulations, waived during the war, has not met with the acceptance of trade unionists, who consider that the bill provides all sorts of loopholes for the employers, while demanding from trade unions the observance of many formalities before restoration can become enforceable. Objection is taken to the fact that restoration is not provided for immediately, but only after peace is signed. In many ways the unions consider the draft bill does not properly safeguard them; they are, therefore, not prepared to accept the bill unless certain amendments and modifications to it are accepted. A long memorandum embodying the unions' proposed amendments and modifications has been presented to the government, and it is understood that, provided these are inserted in the bill, the measure will be introduced soon after the new Parliament assembles.

Pacific Coast Marine.

Officials of the Ross Construction Company of San Diego announced that rapid progress is being made on the new marine railway under construction at the naval coaling station at La Playa. Approximately 15,000 cubic yards of material will be dredged from the area adjacent to the ground ways by drag line scrapers attached to cables. The marine railway will be ready for docking light draft ships about January 1, 1920. It will cost $250,000.

According to advices received from Honolulu more than 90,000 tons of the new sugar has already been shipped out of Hawaii to the mainland. The first cargo to be sent direct to Delaware via the Panama Canal was to leave on the steamer "Point Bonita," which is being put in shape to load at Pearl Harbor. It is expected that the sugar crop will be moved without difficulty this year, as there will be a larger available tonnage of ships than a year ago.

Twenty-two men who have been honorably discharged from Uncle Sam's military service recently are now employed by the Board of State Harbor Commissioners to perform work for the San Francisco Belt Railway. Fred Stewart, superintendent of the railway, said that although there are ample names on the waiting list, none of these represent men who need work as urgently as the discharged soldiers, and he therefore decided to give the jobs to men who needed them the most and who are the most deserving.

Shipments of turtle oil soon will be received at San Diego from Ensenada for transshipment to San Francisco, according to word received from the lower coast. A fisheries company of Ensenada is now employing a large number of Mexicans in killing turtles ranging from 100 to 300 pounds in weight. Last week Mexicans are reported to have killed so many turtles that they were stacked up like cordwood, waiting to be cut and rendered into oil. Turtle oil is used in the manufacture of high-grade soap, and is much sought after by cosmetic manufacturers.

Safety of the schooner "Oakland," owned by Albers & O'Neill of Portland, Ore., which has not been heard from since December 12, 1918, was assured when a message was received by her owners from Pago Pago that she had been sighted off that port on her way to Apia. It had been feared in commercial circles that she had been lost on her way from Lyttleton to Apia during South Sea hurricanes which are prevalent during the early months of the year. She was supposed to have left Lyttleton on December 12 in charge of Captain Wendt who has his family with him on the voyage.

A cabin board sign bearing the name "George A. Loomis" was washed ashore near Port Orford, Ore., on February 26. It provided definite trace of the missing Standard Oil tanker, which was posted as lost last December and is believed to have gone down with every man of her crew between San Francisco and Coos Bay. The fate of the "Loomis" has been one of the mysteries of the Pacific Coast shipping. She sailed from San Francisco with a cargo of oil for Coos Bay. Vessels spoke her on the way up the coast one day and the next she disappeared from the sea without sending a single distress message.

Cargo lumber shipping from the Columbia River during the month of February was unusually light. Figures compiled by Deputy Collector Haddix show that in the month just closed twenty vessels loaded at the mills in the Lower Columbia River district and their combined cargoes totaled 13,586.102 feet of lumber. Sixteen of these vessels carrying 12,128,960 feet went to California, while four vessels laden with 1,457,142 feet are en route to foreign ports. In the same period six vessels loaded 4,166,539 feet of lumber at the up-river mills, making a grand total of 17,752,641 feet of lumber that left the Columbia River in cargoes in the month of February.

Submarine chasers numbers 304, 305, 306, attached to Mobile Division No. 15, Pacific fleet, are to be permanently attached to the naval air station at North Island, San Diego, according to announcement made by Rear-Admiral William Fullam. The trio of sub chasers are to be employed in assisting disabled seaplanes engaged in coast patrol duty. They also will follow the coast patrol dirigible or blimp on its periodical flights along the coast between San Diego and San Francisco. The efficiency of the submarine chasers in this work was demonstrated a few weeks ago when they rescued three airmen who had made a forced landing in a disabled seaplane forty miles at sea.

The right of the city of Long Beach, Cal., to issue bonds in payment of claims amounting to $382,500, arising out of the collapse of the city-owned pier, on May 24, 1913, was upheld by the California Supreme Court. A writ of mandate was issued to compel the Mayor and the City Treasurer to sign a warrant for $563.23 to M. A Poll, one of the claimants. About fifty-two persons were killed and 250 others more or less seriously injured in the disaster, which was caused by the collapse of a portion of the municipal pier. Damage actions for amounts aggregating $3,500,000 were compromised for $382,500. The case just decided was to test the city's right to issue bonds to meet the liability.

The ferry boats of San Francisco Bay had a busy time in the twelve months of last year, carrying almost 2,000,000 passengers more than in 1917. Statisticians in the office of John K. Bulger, Supervising Inspector of steam vessels, say the Southern Pacific and the Key Route transported 38,995,145 persons in 1918. In the year before that the total was 37,060,457, making an increase of 1,934,688. The Southern Pacific business jumped from 23,326,865 to 24,381,475 and the Key Route kept up a good rate of increase with a leap from 13,733,592 to 14,613,670. Bulger's official figures have to do with passenger traffic in all the San Francisco bay region as well as between San Francisco and Oakland. With the Sausalito, Point Richmond, Vallejo and other ferries included, a grand total of 45,560,086 men, women and children were carried in 1918 as against 44,356,177 in 1917, a gain of 2,203,909.

The shipbuilding plants in British Columbia will close down unless aid is given in the form of bonuses by the Government of the Dominion of Canada, according to information recently received. The British Columbia yards have found it impossible to build ships in competition with the Atlantic coast or British yards. A statement given out by a firm of shipbuilders in Vancouver says the reasons for the greater cost in their plants are high wages paid to workmen on the Pacific Coast, and the increased freight rates between the steel centers of the United States and Pacific Coast yards. As to increase in freight rates, the statement says: "The increase in freight rates amounts to about 60 per cent. over the previous rates, and is caused by the Government's operation of railroads in the United States." The British Columbia shipbuilders are working on a plan for the Dominion Government to give bonuses in order to keep the plants open. They say it would probably only be necessary to bonus the yards for a few years, as they expect that wages in North America, on the Atlantic and Pacific coasts, will be on a parity later on, either by wages on the Atlantic increasing or those on the Pacific falling. They are also hopeful that the handicap in freight rates may be overcome by larger use of water haul from the steel centers to Vancouver.

Concrete ships are destined to form a big part of the new American merchant fleet in the opinion of E. S. Closson, superintendent of the Government's shipbuilding plant at Mobile, Ala., who arrived in San Francisco during the week to inspect local yards. With Mrs. Closson he is registered at the Hotel St. Francis. Investigation has convinced officials of the Emergency Fleet Corporation that the stone ship—tanker, cargo carrier or passenger carrier—is superior to the steel ship, Closson stated. The only element of doubt is whether the stone ship is equal to the life of the steel ship. "There is some difference of opinion on that point," he said, 'but I am confident the concrete ship will last just as long as steel, and probably longer." Two 7500-ton concrete tankers are now being built at the Government's yard at Mobile. They are each 420 feet long, with a fifty-four-foot beam and thirty-six-foot depth, displacing 13,000 tons and drawing twenty-six feet of water. Similar tankers are being constructed at other plants throughout the country. The cost of building a concrete ship is from $25 to $30 a ton less than that of a steel vessel, according to Closson. Because of this and because of other advantages, he believes the program of the Emergency Fleet Corporation will include a great number of the concrete class of ships. Regarding the passenger-carrying possibilities of the concrete vessel, Closson said: "An important factor of the stone ship is that it has less vibration and greater rigidity than the steel steamers, and is, therefore, a much easier-riding vessel. The concrete steamer can be engined to make an equally high rate of speed as the steel ship, and in comparing the two types there are many elements favoring concrete."

F. R. WALL, who was for many years an officer in the United States Navy, is now practicing marine law in San Francisco. He gives claims of all seafarers careful attention. 324 Merchants Exchange Bldg., 3rd Floor, California St., nr. Montgomery. Phone, Sutter 5807 (Adv.)

SILAS B. AXTELL, attorney for the Eastern & Gulf Sailors' Assn., Marine Cooks & Stewards' Association, Marine Firemen, Oilers & Water Tenders' Union, has moved his offices to the ground floor of the Washington Building, One Broadway, New York. Entrance room J, ground floor. Consultation and advice on all matters relating to enforcement of the Seamen's Act, claims for Compensation or damages, will be given free of charge as in the past, by Mr Axtell and his expert assistants, Mr. Vernon S. Jones and Mr. Arthur Lavenburg. (Advt.)

One year, by mail - $2.00 | Six months - - - $1.00
Advertising Rates on Application.

Business and Editorial Office, Maritime Hall Building, 59 Clay Street, San Francisco. Telephone Kearny 2228.

Changes in advertisements must be in by Saturday noon of each week.

To insure a prompt reply, correspondents should address all communications of a business nature to the Business Manager.

Entered at the San Francisco Postoffice as second-class matter. Acceptance for mailing at special rate of postage provided for in Section 1103, Act of October 3, 1917, authorized September 7, 1918.

NOTICE TO CORRESPONDENTS.

Communications from seafaring readers will be published in the JOURNAL, provided they are of general interest, brief, legible, written on one side only of the paper, and accompanied by the writer's name and address. The JOURNAL is not responsible for the expressions of correspondents, nor for the return of manuscript.

WEDNESDAY, MARCH 12, 1919.

DISCIPLINE ABOARD SHIP.

The American barkentine "Puako" arrived at Cape Town, South Africa, last year with an exceptionally lurid tale of mutiny, treason and pro-Germanism among the crew.

The story told by the master of the "Puako," and cabled all over the world, was to the effect that his pro-German crew had plotted all the voyage to kill him and his two sons (on the ship's articles as mates) and sink the ship, for all of which a handsome reward had been or was to be paid by German agents.

So much for the "story."

The truth in the matter seems to be as far distant from the story as the sun is from the moon.

At any rate, after due investigation, the master of the "Puako" and his two worthy sons were arrested and are now en route for the United States to stand trial for causing two members of the crew to jump overboard, and cruelly abusing and ill-treating the balance of those on board on the entire voyage from Victoria, B. C., to Cape Town, S. A.

From the meager information on hand it is quite evident that no American hell-ship of the bucko age ever witnessed more outrageous scenes than were perpetrated during the past year upon the crew of this San Francisco barkentine.

It is a striking coincidence that a writer in a current issue of the Saturday Evening Post quotes and comments on a choice passage from Dana's "Two Years Before the Mast," in which the skipper cruelly beats up a member of his crew.

Here are excerpts from Dana's book followed by appropriate comment:

"Now for you," said the captain, making up to John and taking his irons off. The captain stood on the quarter-decks, bare headed, his eyes flashing with rage and his face as red as blood, swinging the rope and calling out to his officers: "Drag him aft. Lay hold of him. I'll sweeten him" . . . and began laying blows upon his back. He danced around the deck, calling out as he swung the rope: "If you want to know what I flog you for, I'll tell you. It's because I like to do it . . . because I like to do it. It suits me. That's what I do it for."

A little later this worthy soul shouts, "Don't call on Jesus Christ. He can't help you. Call on Frank Thompson. He's the man. He can help you."

Then, when he had his man well scourged, the thing to do was to muster all hands and hold forth in this strain:

"You see your condition. You see where I've got you all, and you know what to expect. I'll make you toe the mark, every soul of you, or I'll flog you all, fore and aft, from the boy up. You've got a driver over you. Yes, a slave driver, a nigger driver. I'll see who'll tell me he isn't a nigger slave."

And inasmuch as the cowardly blusterer had a gun in his pocket and could use it with impunity—for the first step taken toward him could be construed as mutiny—it seems they had to agree that they were nigger slaves. And so he was free to cultivate his taste for drawing blood with a rope's end or a piece of split bamboo. Interesting refinements of torture grew up. To this day there are several mild old gentlemen in my vicinity who I suspect may not be unfamiliar with the mysteries of spread-eagling a man, a ceremony differing from crucifixion only in details.

The Saturday Evening Post writer then follows this tale of refined torture with the following optimistic deduction:

Now nobody should be alarmed by this. The sea and ships have grown soft, after all this long siege of time. Light has been let in on those dark places. Nowadays a skipper is thought to be a hard case if he lets an oath out of him. Fines take the place of scourges; it has become customary to log a man instead of flogging him—that is, to recommend him in the ship's log for a cut of a day's pay or a week's pay, with the reason for this appended.

In the light of what has transpired on the "Puako," the foregoing reads like very faulty generalizing.

In Dana's days of seafaring, sailors were flogged at the master's pleasure. The master of the "Puako" seems to have made considerable improvement over the ancient method of enforcing discipline aboard ship. He not only beat them up as a matter of routine, but hounded them until his victims jumped overboard to escape further torture.

The JOURNAL will have further details upon the voyage of this modern hell-ship when the living victims have returned to America.

In the meantime, is not the "Puako" case a strange reflection upon those statesmen (?) in our country who profess to believe that the cussed Seamen's Law does not enable the master to enforce "proper" discipline among his crew?

JOINT CONCILIATION BOARD.

After a series of negotiations between representatives of all interested parties the U. S. Shipping Board has finally provided a method whereby grievances by members of crews on Shipping Board vessels may be promptly heard and determined. The plans outlined call for the organization of a Joint Board of Conciliation on the Pacific Coast, said Board to act wherever complaints and controversies arise between agents, managers, or operators for the Shipping Board and members of the various seamen's unions in their employ, as follows:

1. That a committee of three be named, one to be a direct representative of the Division of Operations at San Francisco, one to be a representative of the Waterfront Employers' Union at San Francisco, one to be selected by managers of Shipping Board vessels; and a committee of three representing the Sailors' Union of the Pacific, the Marine Firemen, Oilers and Watertenders' Union of the Pacific, and the Marine Cooks and Stewards' Union of the Pacific Coast. These six men shall compose the Joint Board of Conciliation with headquarters at San Francisco, California.
2. That all complaints and controversies arising between members of the Sailors' Union, Marine Firemen, Oilers and Watertenders' Union, and Cooks and Stewards' Union, and the managers of the Shipping Board vessels, or their agents, which cannot be adjusted by the parties immediately interested be referred to the Joint Board of Conciliation for decision by the majority of this Board, which shall be deemed final and conclusive.
3. In the event of a failure on the part of the Board to reach a majority decision the matter may be referred by either party to the United States Shipping Board at Washington, which will render a final decision upon the matters at issue.

During the war there was, of course, but very little if anything that might be labeled as serious friction. The District Unions of the International Seamen's Union of America, without taking any undue credit for that fact, managed to keep things going without ever resorting to an actual stoppage of work.

Now that the war is over the functions of a well-balanced Board of Conciliation, such as has now been provided by the Shipping Board, should go a long way to prevent unnecessary friction and secure proper disposition of all complaints which are capable of adjustment.

Here's success to the new Board!

A SUBSTANTIAL AWARD.

John Patrick Perry, a seaman injured aboard the steamship "Cricket," has been awarded $28,750 damages in the United States District Court, Eastern District of New York, in a suit brought against the Cricket Steamship Company of California. While operating a steam winch aboard the "Cricket" at Frontera, Mexico, last November, Perry became entangled in the cable which jammed him against the winch with such force that he lost his right arm, besides receiving other injuries.

The reason such an unusually heavy award was given is doubtless due to the fact that the attorney for the plaintiff (Mr. Axtell) produced evidence to show that the winch was without an emergency steam valve. It was also shown that the location of the regular valve was known to only one member of the crew, and that before this man could run aft and shut off the machinery, the plaintiff's injuries occurred.

Not the least gratifying feature of this case is the manner in which a number of witnesses stood by the injured man to the last, it being reported that two of them were actually discharged as a result of their loyalty and their desire to see the truth told.

Another good aspect of this award is its size. This ought to hasten the enactment of a Federal Seamen's Compensation law. As matters now stand, America is about the only maritime nation on earth that does not compensate merchant seamen for injuries received while at work, unless it can be specifically shown that there was negligence on the part of the employer or his agents.

The Department of Commerce has just issued a 12-page circular explaining the laws and regulations for the protection of fisheries in Alaska. All those about to be engaged in the Alaska fisheries should make it a point to secure one of these circulars. Write to the Department of Commerce, Washington, D. C., and ask for a copy of Department Circular No. 251.

The strata of society who would have the Peace Conference subordinate human rights and the happiness of the common people to those of great business, we think, will have a new thought coming. Big business groups such sentiments with the theoretic, and to be given passing notice only when it has its craw full.

SEAMEN'S WAGES IN EUROPE.

Our esteemed contemporary, The Public, supplies the following sane comment on the seamen's high wage controversy which has been so assiduously fostered, of late, by shipping magnates of the Robert Dollar type:

In striking contrast with the complaints of certain American shipowners and the American Protective League are the reassuring words of Edward N. Hurley, chairman of the United States Shipping Board. Mr. Hurley, who has just returned from three months' investigation of shipping conditions in Europe, says that "he does not see any reason why America cannot compete with the principal European countries. The wage question is not a very serious one, as England pays seamen $72 a month, while we are only paying them $75. The French and Dutch are paying high wages, and in Sweden the crews receive even more wages than they do on American ships." If the war has brought wages so near a level as this, it should be an easy matter for Andrew Furuseth, chairman of the International Seamen's Union, who is now in Europe, to secure an agreement at the Peace Conference that will pave the way for the adjustment of the whole matter. The question of seamen's wages appears to be very much like that of child labor when each State excused the employment of children because the other States permitted it. The nations can, if they wish, agree to raise the standard of living to a decent level for all sailors.

In this connection, it seems timely to caution readers of the daily press not to take everything for granted that has been published regarding an alleged "split" among the delegates at the recent convention of the International Seafarers' Federation.

A full account of what happened at the London convention will be published in the columns of the JOURNAL at the earliest possible date. In the meantime it would be well to suspend judgment upon the entire subject matter.

UNHAPPY FINLAND.

Since the armistice was signed it has become more and more evident that Belgium is only one of several countries where the people have suffered untold agonies. A story is just now being vouched for to the effect that the labor temples in Finland, built by the co-operative effort of the laborites, peasants and socialists, have been converted into military drill halls, and that the labor movement of Finland has almost been destroyed through the butchery of workers and repressive measures inaugurated by the White Guards. The foregoing charge is openly made by Carl Sandburg, staff correspondent of the Newspaper Enterprise Association, who has just arrived from northern Europe with pictures and documents never before published. Mr. Sandburg points out that the workers of Finland owned some 800 labor temples and people's houses, practically all of which have been taken over as drill halls and arsenals. The right of workmen to organize or strike, he says, is gone. Upwards of 27,000 persons are held in convict camps, 10,000 have been butchered in mass executions, 12,000 starved to death, one colony of 10,000 moved to Russia, and other thousands moved elsewhere beyond Finnish frontiers. All labor and Socialist newspapers are suppressed, and censorship is rigid.

The trade unionist will know very well that he can not yet buy all the things that he could at reasonable prices, but he can still buy the union labeled articles at reasonable prices, and they are no harder to get now than they were before. Buy them with your union-earned money.

PURPOSE OF THE SEAMEN'S ACT.

Precedent and Authority for Seamen's Act to be Found in Navigation Laws Originated by Cromwell.

A recently published defense of the Seamen's Act by Mr. Silas B. Axtell of New York was severely criticized in the editorial columns of the Liverpool (England) Journal of Commerce.

Mr. Axtell comes back with the following well-worded rejoinder:

To the Editor, the Journal of Commerce,
Liverpool, England.

Dear Sir:—My attention has been called to the editorial entitled "The Seamen's Law of the United States" in your paper of February 7, 1919. Apparently, you must realize that the Seamen's Act of the United States, as enforced against British vessels, has been of immense benefit to the human beings employed on board them, although detrimental to the financial interests of the owners of the ships themselves. Otherwise, your opinion would have been expressed in more violent terms. You do state this, however, which is going a little strong, and it seems to me is clearly erroneous:

"One can understand that it might be arguable to say that if foreign ships seek to take exports in competition with native vessels they must submit to local regulations. But it seems somewhat sweeping to try it both ways. And, indeed, the whole idea seems to be rather a new and revised version of the 'Freedom of the Seas,' based on the good old Prussian idea."

I have read all of your remarks carefully, but I cannot gather from the context what you mean by "the good old Prussian idea," unless it is some conception of the freedom of the seas that is supposed to have emanated in Germany. However, you don't connect it up in any way so as to indicate anything to my mind.

The people of the United States, I believe, have always considered that they had a right to take any action they saw fit to protect their commerce or the health of their people; hence, tariff legislation, restrictions as to quarantine inspection of vessels, immigration regulation, and laws with regard to labor. Out of the same policy grew our laws concerning restrictions as to coastwise trade.

Now, it appears that we are on the threshold of a new era. The Seamen's Act was conceived, principally, to liberate one class of humanity who had not been given the ordinary rights and liberties enjoyed by other classes of people. The laws of the Phoenicians and the Romans contained very drastic provisions as to treatment of seamen who deserted ships during the voyage. These laws were promulgated by Eleanor, Duchess of Guenne, mother of Richard I of England. The Merchant Shipping Acts of 1894 and 1906 of Great Britain contained the principles that have been adversely affected, if not destroyed, by the Seamen's Act of the United States, which was passed March 4, 1915. These laws were all right for shipping conditions of a century ago, but are totally inadequate for present-day purposes. A man who breaks a civil contract of employment on a ship does not merit public disapproval for his act, unless there is a consequent injury to his employer or the public which cannot be compensated for by the loss of his wages or a portion thereof. The necessities of trade by sailing ships, especially when trade was in its early stages, required that the crew be kept by the ship until the completion of the voyage, as substitutes were often unavailable. To-day, and for the last thirty years, trade conditions have been entirely changed in practically all ports of the world. Substitutes have been available and can always be obtained, provided the shipowner would pay a wage which would induce the men to leave shore employment for the sea.

In the march of civilization, the demands of industrial workers for more liberty, better pay, more opportunity for the enjoyments and the blessings of life, the seaman not having any vote, or a negligible one, has been discounted. If it were not for the fact that the commercial interests of the United States as well as the principles of humanity demanded the reform brought about by the Seamen's Act, it is doubtful if it ever would have become a law in the United States, or have received even half-hearted endorsement and enforcement from our courts. A few years hence people will realize that there was no reason for holding seamen to contracts and arresting them if they broke same, where plenty of substitutes are available to take their places. The wrongs, iniquities, positive vice that I have myself observed in the operation of foreign vessels of various flags, many of them British, even in the port of New York, are sufficient proof that the maintenance of such laws are contrary to the public policy of the United States.

I am not one of those who contend that all virtue is to be found on the shores of America, that all progress originated here, and that our people are the only ones who have had the privileges of free men; but I do say, most emphatically, that our people do not see any

(Continued on Page 11.)

OFFICIAL.

SAILORS' UNION OF THE PACIFIC.

Headquarters, San Francisco, Cal., Mar. 10, 1919.
Regular weekly meeting came to order at 7 p. m., Ed. Andersen presiding. Secretary reported shipping improving; large number of members ashore.

JOHN H. TENNISON,
Secretary pro tem.

Maritime Hall Bldg., 59 Clay Street. Tel. Kearny 2228.

Victoria, B. C., March 3, 1919.
No meeting; shipping slow; members scarce.

J. ETCHELLS, Agent.

Room 11, de Cosmos Block, 1424 Government Street.

Vancouver, B. C., March 3, 1919.
Shipping fair; prospects good.

W. G. MILLARD, Agent.

58 Powell Street E. P. O. Box 1365. Tel. Seymour 8703.

Tacoma Agency, March 3, 1919.
No meeting. Shipping and prospects medium.

H. L. PETTERSON, Agent.

2016 North 30th St. Tel. Main 808.

Seattle Agency, March 3, 1919.
Shipping dull.

P. B. GILL, Agent.

84 Seneca St. P. O. Box 65. Tel. Main 4403.

Aberdeen Agency, March 3, 1919.
No meeting. Few men around; shipping dull.

ED. ROSENBERG, Agent.

P. O. Box 280. Tel. Main 557.

Portland Agency, March 3, 1919.
Shipping good; prospects good.

JACK ROSEN, Agent.

88½ Third Street. Tel. Main 6013.

San Pedro Agency, March 3, 1919.
Shipping fair.

HARRY OHLSEN, Agent.

128½ Sepulveda Bldg., Sixth St. P. O. Box 67. Tel. 137 R.

Honolulu Agency, Feb. 24, 1919.
Shipping poor; prospects poor.

JACK EDWARDSON, Agent.

P. O. Box 314. Tel. 2526.

MARINE COOKS' AND STEWARDS' ASSOCIATION OF THE PACIFIC COAST.

Headquarters, San Francisco, Cal., Mar. 6, 1919.
Regular weekly meeting was called to order at 7 p. m., Eugene Burke in the chair. Secretary reported shipping quiet; plenty of members ashore. The full Shipwreck Benefit was ordered paid to two members wrecked on the S. S. "Wishkah."

EUGENE STEIDLE, Secretary.

42 Market Street. Phone Kearny 5955.

Seattle Agency, Feb. 27, 1919.
Shipping fair.

LEONARD NORKGAUER, Agent.

Grand Trunk Dock, Room No. 203; P. O. Box 214. Phone Main 2233.

San Pedro Agency, Feb. 26, 1919.
No meeting. Shipping slow; few members ashore.

JOE MACK, Agent.

613 Beacon St. Phone Sunset 336. P. O. Box 54.

DIED.

James Borden, No. 1612, a native of Massachusetts, age 40. Died at San Francisco, Cal., March 8, 1919.

Edward Carron, No. 1024, a native of New Zealand, age 32. Died in England, March 3, 1919.

John Erickson, No. 1067, a native of Sweden, age 35. Died at Nagasaki, Japan, Jan. 7, 1919.

Nils Johannessen. No. 2116, a native of Norway, age 29. Died in the wreck of the S. S. "San Gabriel," September, 1918.

John F. Smith, No. 2568, a native of Russia, age 50. Died on board the S. S. "Willamette," March 3, 1919.

Frank Werford. No. 1042, a native of West Indies, age 33. Died in the wreck of the S. S. "San Gabriel," September, 1918.

OUR WASHINGTON LETTER.

(By Laurence Todd.)

A Congress that has been quite bankrupt of interest in the problems of the wage working masses in the United States has adjourned, *sine die*. President Wilson announces that he will not summon the new Congress in special session until he shall have returned from Europe in the summer. This gives to the labor movement a clear-cut understanding of its own situation with regard to any solution of the problem of unemployment, the problem of democratic control of the railroads or the wires or the postal service, the problem of public ownership of basic industries, and so on.

For all the help the labor movement can now expect from the national legislature, our Congress might as well be on vacation in Central Africa.

Due to the struggle between Democratic and Republican politicians for possession of the loot of the legislative pork-barrel, a number of the most important appropriation bills were not passed. The Department of Labor, for example, did not get a dollar for the maintenance of the United States Employment Service for the coming year. One reason why the reactionaries have stopped that appropriation is that Director Densmore of the Service took a hand in exposing the Fickert frame-up against Tom Mooney. Another reason is that the Service has been so loaded down with men who were poorly selected for the duties of Employment Service agents that the organization has come in for a great deal of complaint. Chiefly, however, the Service is under fire because the politicians thought—and correctly—that this time it was not dangerous for them to attack the Labor Department.

Then there have been the ultra-conservative labor measures that a hopeful lobby of the American Federation of Labor has been urging—the Nolan bill, granting a minimum wage of $3 a day to all Federal employees; the Booher bill, permitting States to exclude convict-made goods; the Keating-McKeller bill, establishing retirement pensions for aged employees in the Government departments—these have all been dropped. Not a line of labor legislation have we had in this session, except a temporary measure for taxing goods made by child labor and shipped in interstate commerce. This has still to run the gauntlet of the Supreme Court, which nullified the first Child Labor Act.

"We are drifting very rapidly into chaos; we shall have a general epidemic, or country-wide wave, of strike, about April," was the opinion given this morning by one of the two or three men in America who are most completely in touch with the entire labor movement—conservative and radical alike. "Here we are in the very midst of demobilization, and yet nobody has a plan for re-employing these millions of men. Congress hasn't furnished one. The administration hasn't furnished one. The labor movement itself has no idea of what is going to happen. The answer is—confusion, chaos, more unrest, more confusion. The end no man can see."

The bankers who finance the coal operators held a conference in New York City the other day, with the coal operators. In the good old way, these gentlemen decided the industrial fate of half a million organized coal miners, without hearing a word from those miners. They announced that they had decided that the coal miners could do one of two things—they could agree to work two days a week at the wartime rate of pay, or they could agree to work four days a week at reduced pay. The bosses would not permit them to work full time, or even four days a week at the present rate of pay.

These autocratic decisions by the bankers and operators are to be applied—if the miners permit it—after the Fuel Administration shall have given up its claims to control over the industry. That date is understood to be very near at hand. At that time the United Mine Workers of America, by districts, will probably present to the bosses a fundamental proposition, which may even be as sane and sensible and "revolutionary" as was the plan for democratic management of the railroads, presented by the 2,000,000 railroad employees.

I asked "Mother" Jones, this morning, whether the coal miners would offer to the operators a plan for Government ownership and democratic management of the coal industry. She said she did not know just what was to be proposed, but she was certain of one thing, and that was that "The boys will fight for bigger and better things than they have ever fought for before."

This possibility comes with the more immediate news importance because the entire 2,000,000 men in railroad service are now putting up to Director General Hines their demands for further wage increases, to meet the increased cost of living. Hines is opposed to permanent Government control of the roads. As he is a former official of a big railroad company that is not surprising; nor will it be astonishing if he refuses to grant the final demands of the men. The railroad industry is no more proof against a strike than is any other industry.

To all this unrest there is added the knowledge that for the first time since America was a republic the employers cannot bring large numbers of workers from European countries to break down the unions and to depress the industrial standards set up by men and women born here. The Great War has changed all that, as "Mother" Jones said to-day, and these European workers are now busy on the job of establishing liberal industrial republics at home; some of the revolutions have not been finished, and some have not been started, over there, but the United States is in no danger of being in future the refuge of the politically oppressed of other lands, nor the dumping ground of labor that can be used to undermine the organized labor movement.

Look at the New York harbor strike dispute, for instance. As was reported in this correspondence, the men who tied up that port early in January were disappointed by the action of Bill Taft of the War Labor Board, and were disappointed in the selection of V. Everit Macy as umpire in the case. Macy has upheld the eight-hour day, but has denied them a raise in wages. The unions have voted to reject the award, and they have sent Frank Walsh here as their lawyer, to ask President Wilson to place New York harbor under Federal control. If the President does not act, the strike will be resumed. The men know that there will be no importation of strike breakers, either from Europe or from the centers of immigrant labor supply in this country.

All of these possible strikes are to-day made the more dangerous, rather than the less important, by the fact of serious unemployment. Americans want jobs, but they will not scab. They have fought for democracy in Europe, and they will insist upon the fruits of democracy here. Thousands of returned soldiers, thus far, have been reported on strike picket lines in all parts of the country. Not one strike has been broken by the men who have been in khaki. That is the big fact that has stuck like a thorn in the fat flesh of our feudal employers.

To-day's biggest item of news is the conference between Premier Lloyd George and the spokesmen of British labor and of the British employers, at which the premier admitted frankly that labor was not going to be calmed down again with anything less than a serious transfer of power from the hands of capital to the hands of labor. In spite of the diplomatic and conservative move made by Arthur Henderson, in creating another joint committee to "investigate and report" in five weeks, the conference was in fact a discussion of the terms of surrender of British private capitalism. British labor gave Lloyd George and the employers a choice of immediate or delayed battle, or of surrender. In any event, British labor is going to control the policy of British industries henceforth. What the Russians have secured awkwardly, through civil war, and what the Germans and half a dozen other peoples in Europe are to-day grasping under threat of civil war, from their own industrial overlords, the British workers are demanding in a perfectly legal and commonplace manner, on the ground of the welfare of the people.

Study the speeches that are being made against the proposed League of Nations, and in most of them you will find traces of fear that this League will fall into the calloused hands of workingmen, who may be able to rule Europe within the next few years. In the opposition to the League you can find traces of fear that militarism will disappear too fast, or that a war with Japan cannot be made the excuse for diverting public attention from industrial justice here in the United States. True, some of our standpatters are for the League, but they are the ones who are cock-sure that the old industrial order cannot legally be undermined and replaced by the organization of labor.

The Australian wombat, a marsupial, shares with man and some of the higher apes the distinction of being the only animal to possess a vermiform appendix. Curiously enough, the appendix has in this animal of a very ancient type made further progress toward elimination than it has in man. In a collection of specimens of the appendix of the wombat made by Dr. W. C. Mackenzie of Melbourne, the appendix can be seen degenerating till it almost reaches the vanishing point.

The "labor leader" who fully appreciates the responsibility of his office is to be commended: but the "labor leader" who falls into the error of regarding himself as indispensable is in need of a severe corrective.

In taking advantage of the "spirit of organization," organizers should be guarded against creating elements that tend toward the segregation rather than the cohesiveness of the labor movement.

BLAMING THE GIANT OCTOPUS.

When a ship mysteriously disappears from the face of the deep, sending to the shores no fragments of wreckage as messengers of disaster, then it is that marine theorists with old-fashioned imaginations begin to throw out hints about the possible complicity of our old friend, the sea serpent, who, as every mariner should know, is so huge that

From the tip of his nose to the top of his tail
Is just one thousand miles!

But that equally terrible and better authenticated monster, the giant squid, is also likely to be held responsible. Thus Mr. George Noble, in *The National Marine,* revives the time-honored theory in regard to the mystery of the vanishment of the naval collier *"Cyclops,"* which has gone the way of seventeen other ships of our Navy since 1781—gone without trace. Here was a ship that steamed away almost a year ago, well found, with a modern wireless equipment and a complement of 295 men, yet the exhaustive search of the whole Caribbean Sea by the Navy has revealed no clue as to her fate.

How shall we account for our missing ships, unless, like Mr. Noble, we accept it as a fact that—

About the only possible explanation incapable of contradiction is that Gargantuan Squids—monster cuttlefish—treated of in fiction and in fact, may have reared themselves out of the sea and, instead of winding their tentacles around the hulls and rigging and crushing the structure to matchwood before dragging it to their lair at the bottom, may have helped themselves to the ship's people as delicately and effectually as one plucks gooseberries off a bush—then sunk out of sight and left scarcely a ripple behind.

The history of the ancient belief in the existence of gigantic cephalopods is somewhat obscure. All we know of it is in passages in the works of a few old Greek and Latin authors and a series of Scandinavian traditions.

Eric Pontoppidan, Bishop of Bergen, is generally regarded as the inventor of the fabulous Kraken, and is constantly misquoted by writers who have never read his history of Norway.

But fifty years or more before Pontoppidan, Christian Francis Paullinus, who was born in 1643, a physician and naturalist of Eisenbach, had described a monstrous animal which occasionally rose for plunder along the coasts of Lapland and Finmark—so enormous that a regiment of soldiers could conveniently maneuver on its back.

Less conscientious and more credulous than the Norwegian episcopal advocacy is the testimony of Denys De Montfort, nigh a century later, beside whose "Colossal Poulpe," the gigantic and predatory animal described in the classics by Pliny was a mere pigmy.

De Montfort gravely declared that six men-o'-war captured from the French by Admiral Rodney in the West Indies, April 12, 1782, together with four British ships detached from the fleet as a convoy, were suddenly engulfed by colossal cuttlefishes. He also records a statement of Capt. Jean Magnus Deus, by repute a respectable and veracious man, a trader to China, of an instance when the captain was becalmed and having his vessel's bottom painted while crossing from St. Helena to Cape Negro.

The story runs that three men were standing on planks slung over the side when an enormous cuttlefish rose from the water and threw one of its arms around two of the sailors, whom it tore away with the scaffolding on which they stood. With another arm it seized the third man, who held on tightly to the rigging and screamed for help. His shipmates ran to his assistance and succeeded in rescuing him by cutting away the creature's arms with axes and knives, but he died delirious on the following night. The captain tried to save the other two sailors by killing the animal, and drove several harpoons into it, but they broke away, and the men were carried down by the monster. The arm cut off was said to have been twenty-five feet long and as thick as the mizzen-yard and to have had on it suckers as big as saucepan lids.

The means of observation on the duration of growth and life in the cephalods have been difficult to obtain. From watching the rate of increase of size in young specimens De Ferussac D' Orbigny, and other naturalists have arrived at the conclusion that they sometimes live for many years and continue to grow till the end of their lives. That some, therefore, attain to a considerable magnitude is hardly surprising.

Molina, in his "Natural History of Chile," describes among his other species of cuttlefish one, Sepia tunicata, of which specimens, armed with hooks in their suckers, weighed 150 pounds.

Gwyn Jeffreys, in "British Conchology," talks of a huge cephalopod, stranded in the '60s between Hillsway and Scallaway, on the west coast of Shetland, of which the tentacles were sixteen feet long and the pedal arms about half that length. The largest suckers were three-quarters of an inch in diameter.

To the Paris Academy of Sciences was reported a huge squid met November 30, 1861, between Madeira and Teneriffe, and stated by the officers and crew of the French dispatch steamer *"Alecton"* to be of a deep red color and from sixteen to eighteen feet long without reckoning the formidable arms. Harpoons thrust into the beast drew out of the soft flesh. A rope with a running knot was slipped over it and held at the juncture of the fins, but when the men tried to haul the creature on board its enormous weight caused the rope to cut through the flesh.

But we are not left dependent on documentary evidence alone. Cuttlefish of extraordinary size are preserved in museums at Copenhagen and at Marseilles. In November, 1874, the Rev. M. Harvey, a Presbyterian minister of St. John's, Newfoundland, got possession of a squid, or calamary, as the English sometimes call them, which three fishermen found entangled in their herring net in Logie Bay, about three miles from St. John's.

The body of this specimen was more than seven feet long and the caudal fin was twenty-two inches broad. The two tentacular arms were twenty-four feet long each and the eight shorter arms six feet long each, the largest of the latter being ten inches in circumference at the base. What couldn't such a monster do!

However regrettable the internecine troubles of the trade unions, there remains the consolation that at the crucial moment the opposition of the common enemy will force them to make common cause.

DEALING WITH UNREST.

Governor Frazier, of North Dakota, in accepting appointment to the Board of Governors for a nation-wide campaign against anarchy, writes thus:

"I have your telegram notifying me that I have been appointed on the Board of Governors for a nation-wide campaign to be launched against every manifestation of anarchy and to safeguard American liberties, American labor, American homes, and American schools, and wish to assure you that I am in hearty sympathy with the announced aims of your organization. Here in North Dakota we believe the best protection against revolution is to assist rather than retard evolution, and in this State it is the intention of the Administration to remove discontent and prevent disorder by remedying the legitimate economic complaints of the people instead of trying to stamp out just grievances. As a consequence we have a contented citizenry in North Dakota, which believes in upbuilding our Government and achieving political progress by orderly and constitutional methods. . . . Personally, I feel that Bolshevism is not the only peril to this country. In my opinion the spirit of Bourbonism is even more threatening to the security of our institutions, for, scanning back through history, it seems to me that Bourbonism always precedes and is the cause of Bolshevism."

Demand the union label upon all purchases!

Labor's Economic Platform

Following is the Economic Platform adopted by the American Federation of Labor:

1. The abolition of all forms of involuntary servitude, except as a punishment for crime.
2. Free schools, free text books and compulsory education.
3. Unrelenting protest against the issuance and abuse of injunction process in labor disputes.
4. A work day of not more than eight hours in the twenty-four hour day.
5. A strict recognition of not over eight hours per day on all Federal, State or municipal work, and not less than the prevailing per diem wage rate of the class of employment in the vicinity where the work is performed.
6. Release from employment one day in seven.
7. The abolition of the contract system on public work.
8. The municipal ownership of public utilities.
9. The abolition of the sweat-shop system.
10. Sanitary inspection of factory, workshop, mine and home.
11. Liability of employers for injury to body or loss of life.
12. The nationalization of telegraph and telephone.
13. The passage of anti-child labor laws in States where they do not exist and rigid defense of them where they have been enacted into law.
14. Woman suffrage co-equal with man-suffrage.
15. Suitable and plentiful playgrounds for children in all cities.
16. The Initiative and Referendum and the Imperative Mandate and Right of Recall.
17. Continued agitation for the public bath system in all cities.
18. Qualification in permits to build of all cities and towns, that there shall be bathrooms and bathroom attachments in all houses or compartments used for habitation.
19. We favor a system of finance whereby money shall be issued exclusively by the Government, with such regulations and restrictions as will protect it from manipulation by the banking interests for their own private gain.

WEEKLY NEWS LETTER.

(Continued from Page 3.)

seed, which will enable him to raise the first crop.

"Generally speaking," the circular states, "it is the history of Congress that no legislation is passed unless an insistent demand is made by constituents of Senators and Representatives.

"Kindly furnish me with the number of members of your craft or calling who are now unemployed, and advise me as to the outlook for unemployment during the next three months.

"Furnish me with the names of all firms or companies that have laid off their employes, and particularly the names of those firms and companies that endeavored to hire them back at a lower wage, or at longer hours, or both.

"The necessity for immediate action on the above matters is most urgent, for in this after-war period the trade union movement must apply the same energy and intelligence that was such a paramount factor in bringing the war to a successful close."

Porto Rico "Milked" By U. S. Exploiters.

The merciless manner in which Porto Rico is "milked" by American exploiters is shown by Santiago Iglesias, Senator in the Island Assembly and A. F. of L. organizer, in a statement just issued.

The economic and social life of the island is indicated by Iglesias' summary:

Gain in business for the year 1918, $58,175,755; lost in education for 1918, 49,389 children out of schools.

Last year the people paid in excess of $10,000,000 over the regular prices on food stuffs imported from the United States under the supervision of the food commission. (Governor Yeager's annual report is quoted as this authority.)

The school attendance of the 400,000 children of school age has dropped from 207,000 in 1914 to 142,836 in 1918.

The sugar, tobacco, railroad and ship trusts in the United States, says Iglesias, should be satisfied with an average profit of 75 per cent. and the people of the island starving and losing in schools.

"General McIntyre (Washington) of the military bureau of insular affairs wants to settle many of Porto Rico's economic sufferings by recommending that some good jobs in the insular government be given to reliable natives.

"This will not affect the economic exploitation of the island by the trusts, but it will at least content some of the politicians and anti-Americans. The masses of the people do not seem to be of importance.

"The truth regarding Porto Rico is that President Wilson's meaning of democracy and freedom is not the same as is advocated by his representatives in the island. The democracy applied by Porto Rican officials is entirely different from the democracy which the American people want for the world."

Tricky Employers Censured by Board.

The National War Labor Board has censured the Jacksonville Traction Company for its refusal to assist in the settlement of differences between it and employees. The company is declared to be "autocratic," and the board recommends that "this company, as a matter of plain right and justice, and in conformity with the announced principles of this board, give full and free permission to its employees to organize in labor unions."

The company's tricky attitude and its resort to quibbles in evading a solution for discord, is shown in this portion of the board's award:

"The company contends that the war labor board is without jurisdiction to compel it to respond to such a complaint, as the name of no employe or former employe is signed to it and it is signed by and filed in the name of a union that the company has never recognized or dealt with, and the name of this union is signed by a man who was never in the employ of the company and was not even a member of the Amalgamated Association (street car men).

"The company also contends that this board is without jurisdiction to hear this case under the announced principles of the board on the ground that the controversy is not of sufficient importance to warrant this board in taking cognizance of it; that all of the men who left the service of the company did so voluntarily and are now satisfactorily employed elsewhere."

The strike was called because of the company's trade union antagonism. Several men were discharged.

Fatigue of Workers Affects Nation's Life.

In a survey of long working hours of women in Indiana, the woman-in-industry service of the Department of Labor says that "long hours for the workers have been recognized by the United States Supreme Court as a serious menace to the welfare of the State. In support of this statement excerpts are printed from the defendant's brief in the case of Bunting vs. Oregon, which led the court to uphold an Oregon law limiting women's work day to 10 hours.

"An overtired person," says the brief, "is literally a poisoned person, poisoned by his own waste products. These wastes are poisonous impurities arising from the chemical processes of cellular life. They circulate in the blood, poisoning brain and nervous system, muscles, glands and other organs, until finally burned up by the oxygen brought by the blood, removed by the liver or kidneys or eliminated through the lungs.

"Recent investigations show that not only in the dangerous trades, but in all industries, a permanent predisposition to disease and premature death exists in the common phenomenon of fatigue and exhaustion. This is a danger common to all workers, even under good working conditions, in practically all manufacturing industries, as distinguished from the specially hazardous occupations.

"In ordinary factory work, where no special occupational diseases threaten, fatigue in itself constitutes the most imminent danger to the health of the workers because, if unrepaired, it undermines vitality and thus lays the foundation for many diseases.

"The experience of manufacturing countries has illustrated the evil effect of overwork upon the general welfare. Health is the foundation of the State. No nation can progress if its workers are crippled by continuous overexertion. The loss of human energy, due to excessive working hours, is a national loss, and must inevitably result in lowering the nation's prosperity."

Offer After-War Program.

The New York State Federation of Labor is mailing copies of its reconstruction program to affiliates. President Wilson's 14 points are indorsed.

Other demands call for the remunerative employment of soldiers and workers demobilized since the armistice was signed; a living wage and equal pay regardless of sex; abolition of night work for women; new Federal and State child labor legislation.

Right of labor to form shop committees to advise with the management, and the representation of labor on every public appointive board.

Extension of social insurance to include illness.

Continuance of the National War Labor Board during the present international settlement.

Opposition to any legislation "which will continue the nation on a military basis."

Complete restoration of freedom of speech, assemblage and of the press, with the repeal of legislative restrictions enacted during the war emergency.

Objection to the levying of the war debt "on the wage earners through tariffs or stamp taxation on necessaries, on the amusements of the people, or by insidious and complex wording of revenue bills."

Founding of public food markets in every community, extension and repair of rural highways, maintenance of State experimental farms and other aids to agriculture.

Public ownership of public utilities, including the telegraph, telephone, railroads, merchant marine, express companies and power, light and heat plants.

Improvement and expansion of the public educational system, including free university opportunities for all graduates of high schools.

To Starve Out Workers.

L. O. Koven & Brother of Jersey City, N. J., have shut down their metal works "until such time as our employees are ready to return to work under the conditions we have named."

These business men have discovered that some of their machine shop employees "have been annoyed" by other employees because they have been working at a lower rate than that demanded by the Machinists' union.

"Matters have reached a point where it has to be decided whether we are going to run our own business," it is stated, "and we are going to insist on our right to employ whom we wish and to decide for ourselves what we can afford to pay.

"This machine shop will shut down tonight and will remain closed until such time as our employes are ready to return to work under the conditions we have named.

"We cannot allow other people to tell

us how much we shall pay and who we shall pay it to."

The announcement closes with this unconscious sarcasm:

"We sincerely hope that our employees will realize the fairness of our stand and continue with their work under these conditions."

The machinists have refused to place their welfare in the hands of L. O. Koven & Brother, who are now facing a strike. The firm has orders for Navy work.

"Recognize Unions," Is Advice of Editor.

In a leading editorial on "The World Revolution," the Philadelphia North American advises employers to give "absolute recognition of collective bargaining," and, "especially," says this paper, "should there be recognition of the American Federation of Labor."

The edior does not try to fool himself or his readers on present-day tendencies, and he frankly declares that "while there have been many other periods of change, never in the history of the world have political turmoil and social unrest been so rife as now.

"The first fact to be noted is that the phenomenon is world-wide. The unrest is not confined to countries disordered by defeat or burdened by the colossal costs of victory; it reveals itself in those virtually untouched by the conflict, except as it increases their prosperity.

"An equally striking characteristic is the labor movement, while often finding expression in demands for higher wages and shorter hours really goes far deeper than those issues. It is political, it is social, it is international. It aims to alter fundamental relationships of society, to revolutionize by improvement the conditions of life of unnumbered millions of human beings. One kind of manifestation may be a strike in Belfast or Milan or Fall River, another may be a parliamentary opposition of labor members at Westminster or a meeting of peace plenipotentiaries at Paris to frame a charter of co-operative betterment for international labor. All are features of the same universal change.

"'New conceptions of right and justice,' says Samuel Gompers, 'have grown out of this war. Labor has assumed a new dignity, a dignity born of its splendid achievements during the last four years. Never again will organized working men and women dumbly watch while laws are made or treaties are signed which barter away their economic rights.'

"That," continues the North American, "is a statement of fact. What, then, is the program? To elucidate its details would require a volume. But the movement, reduced to its simplest terms, means a world-wide demand for a more democratic conduct of industry, more equitable distribution of the rewards of labor, wider opportunities for the gaining of economic well-being and the enjoyment of cultural advantages.

"Deplorable and destructive are some of the radical reactions, but the movement itself is essentially one of democracy, of progress, of evolution toward a juster and more secure organization of human society."

Bombay averages more than seventy-two inches of rain a year and gets most of it within four or five months.

PURPOSE OF THE SEAMEN'S ACT.

(Continued from Page 7.)

justification for the enforcement of conditions under which seamen have been compelled to work on board British and other vessels. I do not believe that the people of Great Britain, if they knew just what conditions prevailed on board their vessels in the past, would argue for a retention of such laws. The great sacrifices that have been made by the people of Great Britain, in an effort to preserve liberty for the people of the world in the great war, would certainly seem to be inconsistent with a contrary view.

My article in the Nautical Gazette, which you have criticized, was intended to please the commercial sense of the persons who read it, and admittedly was not written on the broad humanitarian principles which are most deeply affected by the passage of the act. But in speaking to you and your readers I would direct attention to the road humane principles established by the Seamen's Act, or sought to be established.

When plenty of seamen are available, why should men be arrested for breaking their contracts and forfeit all or a greater part of their pay? Why should they not be given freedom to leave the ship when in a safe harbor, as advocated or demanded, I understand, by labor representatives at the Peace Conference?

America and England should unite on this proposition of freeing their seamen. By doing so a merchant marine not heretofore conceived will be developed under the British and American flags. By opposing this necessary and logical advance in the industrial world, England and other nations will relegate themselves to the background, and America, the nation that does recognize such right and evinces such progress (tardy though it be) will step to the forefront. Already seamen of British, Norwegian, Dutch and other nationalities have taken out their intention papers to become citizens of the United States. This is largely in recognition of the fact that under the laws of the United States, conception of liberty for seamen has first found expression.

I do not know whether this is the British idea of the "Freedom of the Seas" or not. I am inclined to think that it is a "Freedom of the Seas" more apt to have been conceived by men like Woodrow Wilson than men like Kaiser Wilhelm. I am inclined to think that it is an idea that will be carried to practical operation by the great liberty-loving people of England rather than by the people of Germany. If England and the United States unite in a demand, as they should, for this degree of freedom for seamen, this standard may be and will be required by the League of Nations for the world. Then, trade between the various ports, and in fact all ports, will be under practically equal conditions. And the nation or ships affording the highest wage, the best living conditions, will obtain the best seamen. The seamen naturally migrate to the ships which give them these benefits and rights, provided they are free to go. The discovery of conditions that have existed on board many British vessels as well as on other foreign vessels, due to the fact that the seamen could not leave the ship, certainly tended to deteriorate human beings and destroy the purposes and principles of government.

The Seamen's Act, as far as it affects foreign vessels, has its greatest precedent and authority in the Navigation Act originated by Cromwell. As a direct descendant of Daniel Axtell, the Regicide, who participated in that period of England's growing maritime power, it becomes my pleasure to apply the same old principle for the benefit of America to-day.

You may publish this letter if you wish to please me. It seems to me that the more public expression of opinion there is on this subject, less danger will there be of misunderstanding and friction arising as a result of our maritime policy.

Very truly yours,

S. B. AXTELL.

New York City, March 6, 1919.

FUNDAMENTAL PRINCIPLES.

1. The right of all workers, including common laborers, to a living wage is hereby declared.

2. In fixing wages, minimum rates of pay shall be established which will insure the subsistence of the worker and his family in health and reasonable comfort.—Principles and Policies of National War Labor Board.

It is well that we should draw a clear distinction between the member who displays a great deal of enthusiasm in debate and the member who merely evinces a bad temper.

Labor News

Industrial unrest continues to grow. Official figures show 31 cities where conditions are serious.

The output of three-fourths of the factory workers in the country can be trebled by adequate training, according to a report of the United States Training Service issued on the 5th instant.

The proportion of industrial accidents has been reduced 50 per cent. within the last ten years, according to the Department af Labor. It is planned to introduce special courses in safety work in technical High Schools.

At a meeting of the No. 11 International Typographical Union in Memphis, Tenn., the delegates to the Memphis Trades and Labor Council were instructed to vote against recognition of the newly organized policemen's union. This action, which has aroused considerable comment, is based on the stand taken by the American Federation of Labor, which does not recognize unions formed by patrolmen.

Bad housing is responsible for much of the unrest among labor, said Joseph D. DeLand of the United States Housing association at a conference in Harrisburg, Pa. It is the man who is always on the move who causes the trouble, he said. When housing conditions are bad, "there is no inducement for the flitter to settle down." Fewer people in proportion to the population, he said, own their own homes in this country than in any other civilized country in the world. The speaker favored the establishment of a federal fund, augmented by State appropriations, to be used in meeting labor's housing needs.

There is an alarming number of miners in this country physically unfit for this work because of conditions in the mines, said Dr. A. J. Lanza chief of the United States Division of Industrial Hygiene, at a recent meeting of mining engineers. The speaker said that these physical units are more numerous than in any other country in the world. Dr. Lanza declared that as long as "dry drilling" is permitted in hardrock mines there would be an inordinate amount of pulmonary disease among miners; that "dry-drilling" apparatus might be as deadly as a machine gun, though somewhat slower, and that its continued use in the mining industry is a matter of reproach. American ingenuity, he said, should be able to produce a water drill that would make nearly impossible miners' consumption.

Organized mine, mill and smelter workers have appealed to the Idaho State Federation of Labor to assist them because of the refusal of employers to fulfill promises made during the Liberty Loan campaigns. The unionists say they were assured steady employment if they bought bonds on installments and that where the worker could not continue payment the employer would refund the amount paid thereon and take the bond himself. The mines are now shut down and the employers reject their agreement. Many workers find themselves with a partially paid bond and no employment, with the alternate of borrowing money at excessive rates or losing the bond. The unionists say they know of instances where a $50 bond was sold for $20 to enable the holder to seek employment elsewhere.

You Want the Truth

This year there will be stirring times in the Nation. Under government censorship it is increasingly difficult for the average man to get the real meaning of the social and political movements of the day.

LA FOLLETTE'S MAGAZINE

will be specially represented at Washington and will analyze and present the news from the capital truthfully and fairly. Senator La Follette is making a real fight to lift some of the tax burdens from the common people and place them where they belong — on excess profits, war profits and surplus fortunes and incomes. Because of this he is being attacked more bitterly than any other man in public life.

Send in your order today.

$1.00 Per Year—Agents Wanted
La Follette's Magazine, Madison, Wis.

INFORMATION WANTED.

The salvage case of S. S. "Princeton" which salvaged the S. S. "Ardmore," both vessels owned by Standard Oil Company of New Jersey, has been tried and resulted in an award of $7,500 to the crew. This amount has been received, and members of the crew of S. S. "Princeton" are requested to call for same at the offices of Mr. Axtell, One Broadway, New York, N. Y.

For the benefit of the widow of John Karus, lost at sea, October 17, 1918, at 2:15 a. m., according to the report in the official log of the barkentine "Aurora," will all members of the crew of that vessel who know anything about the ship, the condition of her rigging, before and after the accident, or anything that will tend to explain his disappearance, communicate with the undersigned attorney for the widow?—Silas Blake Axtell, No. 1 Broadway, New York City. 1-1-19

Ellis R. Nelson, last heard from at New Orleans, La., Nov., 1916, when on board U. S. C. G. S. S. "Davy," is inquired for by his mother. Anyone knowing his whereabouts will kindly communicate with R. J. Nelson, 59 Clay St., San Francisco, Cal. 11-6-18

WANTED—MEN AND WOMEN

Liver Complaints

Properly, every derangement of the liver or bilious system is a liver complaint; but the peculiar state now referred to is a CHRONIC AFFECTION, and it usually arises from torpid or congestive state of that important organ. Sometimes the bile is deficient in quantity or vitiated, or both these states prevail at the same time. Sometimes the disease is caused by an obstruction in the duct or pipe which conveys the bile from the liver into the bowels.

This obstruction is very frequent and is usually caused by the pipe being logged up by thick, tenacious slime or mucus, and sometimes by gall stones. The bile is then thrown back into the gall-bladder where it is absorbed by numerous small vessels which convey it to the Thoracic duct, and from thence the bile is conveyed to the heart, and becomes mixed with the blood. The bile in this manner being diverted from its proper course and circulating in a part of the body where it was never designed by nature produces evil and often disastrous effects upon the health of the individual for want of healthy bile to mix with the half digested food. As results, costiveness, or alternately, costiveness and diarrhoea, prevail; together with wind in the stomach and bowels, and the patient is often annoyed with worms and frequently with piles.

The coarse particles of the bile thus mixed with this blood, more or less obstruct the sores of the skin and small blood vessels, and hence give rise to various diseases of the skin. It becomes more or less yellow, and sometimes there is a perfect jaundice. The white of the eyes also has a green or yellow tinge. More or less bile is strained off from the blood in its passage through the kidneys, and is mixed with the urine.

The tongue is usually coated with a white or brown scurf. There is irritation and frequently chronic inflammation of the inner surface of the stomach and bowels. Sometimes there is a loathing of food and at other times there is a voracious appetite.

There is a feeling of oppression across the stomach and chest, as if pressed down by a weight; troublesome and often frightful dreams, low spirits, langour and want of energy.

To sum up in a few words, a sensation of fullness and distention across the abdomen, with tenderness on pressure; lowness of spirits, biliousness, colics and bilious diarrhoea and dysenteries; obstinate costiveness, jaundice, etc., may all originate from the same cause, a deranged state of the liver.

The most successful treatment is to give the patient every night on going to bed from one to two laxcarin tablets, or enough of them to insure one evacuation from the bowels next morning. The dose of laxcarin can be increased or diminished at pleasure, so as to produce the above effect, and their use should be continued as long as needed. Usually three or four boxes of laxcarin, at the most six are needed.

Laxcarin is sold by the Laxcarin Products Co. Price per box, one dollar. Full treatment, six boxes, five dollars. Will be sent postpaid upon receipt of cash, money orders or stamps. Substitutes must be refused. Department E-99, Pittsburgh, Pa.

INFORMATION WANTED.

Anyone knowing the whereabouts of Woodley Ransome and Charles Bland, who were members of the tug "Virginian" when she was damaged by the "Navy Tug No. 4," will kindly communicate with Arthur Jones, Agent, Marine Firemen's, Oilers' and Watertenders' Union, 513 Main St., Norfolk, Va. 11-6-18

Home News

Revised crop estimates indicate that there will be available during 1919, 81 pounds of sugar per capita for domestic use. There is still danger, however, of a world shortage of sugar.

Major-General Enoch H. Crowder, Provost Marshal General, recommends in his second annual report on the selective service system, just issued, that the draft machinery be used to take the decennial census.

Though the war is no longer being fought on fields of battle in Europe, its aftermath both in America and Europe is very much in evidence. Julius Barnes, head of the Food Administration's grain corporation, has just made the recommendation to Congress through the House Agriculture Committee to delegate powers to President Wilson of such a character as to make effective the Government guaranty of a price for the 1919 wheat crop. He also asked for an appropriation of at least one billion dollars, with authority to borrow more if necessary, on the credit and property of the Grain Corporation.

The Chamber of Commerce of the United States has informed President Wilson that a referendum vote of the chamber's membership indorsed cordially the President's work and plans at the Peace Conference. An executive committee, consisting of Edward A. Filene of Boston, chairman; Philip H. Gadsden of Charleston, S. C., and George E. Roberts of New York, was named to ask every member organization of the chamber to create a committee on the League of Nations, take up the subject in public meetings, and supply member organizations with material necessary for carrying on campaigns of education.

The State Department has issued passports to Algernon Lee, Socialist Alderman, and James O'Neal, an editor of the New York Call, to attend the International Socialist and Labor Congress now being held at Berne. This was done after they appealed to President Wilson and he had transmitted a request to the State Department. These delegates, together with John M. Work of Iowa, were chosen by a referendum of the Socialist party. Samuel Gompers refused to attend the Congress on account of its willingness to receive representatives of the Russian Socialists, and Charles Edward Russell and William English Walling expressed the opinion that the Berne Congress was a plan to help the Germans.

During the week mass meetings have been held in a number of cities demanding the release of political prisoners and the repeal of the espionage act. It seemed appropriate to call the meetings together in the name of Lincoln, the Liberator. They have been under the auspices of the National Civil Liberties Bureau. The bureau urges the support of the country for the bill to repeal the espionage law introduced in the Senate January 9th by Senator France of Maryland. The National Civil Liberties Bureau makes the assertion that its workers had gathered together all the cases of prosecution under the espionage law that they could reach without having access to the records of the Attorney General, and they assert that they have found no record of a single instance where a spy had been imprisoned under this law.

Domestic and Naval

The bark St. James, on a voyage from Vancouver for Durban, is reported wrecked near Pitcairn Island, December 16.

The steamship "Flirt" on a voyage from Newport News for Porto Rico, coal laden, was destroyed by fire January 30, lat. 26 30 N., lon. 68 54 W.

The British steamship "Capelmead," ex "Armora," 1,903 tons gross, 1,153 net, carries about 3,170 tons d.w., built at Sunderland in 1911, and owned by Arthur Capel & Co. (London), Ltd., has been sold for about £80,060.

The British steamship "Capelhall," ex "Battenhall," 2,174 tons gross, 1,378 net, carried 3,650 tons d.w., built at Blyth in 1901, owned by Arthur Capel & Co. (London), Ltd., has been sold to the Town Line (London), Ltd., Cardiff, for about £63,000.

Arrangements have been made whereby the joint offices of the Cunard, Anchor and Anchor-Donaldson Lines in the United States, and at Winnipeg and Vancouver, will represent the Toyo Kisen Kaisha, with the exception of New York and San Francisco, where the Japanese Line has its own offices. The offices concerned are at Boston, Philadelphia, Pittsburgh, Chicago, Minneapolis, St. Louis, Seattle, Baltimore, Washington, Winnipeg and Vancouver. This arrangement follows a similar one adopted for the British agencies of the T. K. K.

Japanese steamship enterprise is becoming manifest in every part of the world. The steamship service between Bombay and Naples and Genoa, which before the war was carried on by the Italian company Societa di Servizii Marittimi, has since last April been undertaken by the Osaka Shosen Kaisha. This company also runs a line to Marseilles from Japan, to replace the service carried on before 1915 by the French company Messageries Maritimes. It is now announced that the O. S. K. will inaugurate another service to London from Japan, supplementing its own and that of the Nippon Yusen Kaisha. The boats on this line will call at Colombo and proceed direct after leaving Port Said. The service will be performed by new ships of about 7,800 tons gross and 12,000 tons deadweight capacity, which were built in Japan during the past year.

Before the war a number of steamers belonging to the London-American Maritime Trading Co. were chartered by the Rio de Janeiro Light and Power Co. to supply coal for the gasworks of Rio and S. Paulo to the amount of some 320,000 tons per annum. Then came the war and the setamers were requisitioned by the British Government. To-day, however, owing to the development of hydro-electric power, no coal is wanted for generation of electricity and at Rio and S. Paulo 120,000 tons will suffice. In other words, consumption of black diamonds has been reduced by 200,000 tons by substitution of "white coal," a not inconsiderable saving, which shows how the exploitation of natural resources throughout the world may affect the sea-carrying trade. It is expected that through the development of hydro-electric power, the coal consumption in Italy will in time be decreased considerably.

News from Abroad

In the allotments for European relief, official plans provide for shipment to Germany of 200,000,000 pounds of meat per month.

Exports to the United States from India, as shown by the records of the Bombay Consulate, advanced in value from $8,261,283 in 1916 to $10,475,021 in 1917. Although there was an increase in the value of most articles on the list, that of castor beans alone accounted for $1,984,006 of the $2,213,738 gain.

It is said that American mining men are quitting Chihuahua, in Mexico, to escape paying Villa tribute. The operators fear that their property will be pillaged and damaged, but declare that payment to Villa would lead to immediate difficulty with the Carranza Government on charges of aiding rebels.

The president of the German-Austrian republic in a speech made on the 17th declared that the republic was firmly established, and that the Hapsburg dynasty was a thing of the past. He said the formal abdication of the throne would be demanded from former Emperor Charles, who had only withdrawn from the Government and had not abdicated.

The recent election held in Poland for a constituent assembly was the first election in 140 years without foreign rule. Premier Paderewski and M. Dmowski received fifty per cent. of the total vote; the Polish Socialist party got 15 per cent., while the remainder went to Jewish candidates. Out of 435,000 eligibles votes, 320,000 voted. Women voted in great numbers.

If plans adopted by a special committee are carried out, Tokio will become a city with an area of 226 square miles—a startling contrast to its present area of thirty square miles. The Tokio Asahi claims that the absorption of the score of suburban cities, some of which the editor says possess larger populations than other principal cities, excepting Osaka, Yokohama, Kobe, Kyoto and Nagoya, will make Tokio the largest city in the world. The movement is to bring these suburban towns under one administration.

The Kobenhavns Flydedok, third largest yard in Denmark, is taking up the manufacture of ferro-concrete vessels on a large scale. Vessels will be built according to a new system, due to the Danish engineer Bartels. Great strength is obtained by using a double bottom, but the two parts of the bottom are so thin that the total weight is not greater than that of the single-bottom construction usual in ferro-concrete vessels. The company has on order a 1800-ton cargo steamship, to be built on the new system for the "Patria" company. This vessel should be completed next summer.

Proportional representation has been adopted for State elections in New South Wales. The new system applies to the entire membership of the lower house of Parliament, the legislative assembly. The contest was between Preferential Voting—the election of each member of Parliament separately by the Australian majority preferential system and the Hare system of proportional representation. The debate on the question took place on November 27. Majority preferential voting was first defeated by a vote of 43 to 14. Then proportional representation was carried by a vote of 40 to 23.

With the Wits

"Is your place within walking distance of the cars?"

"I dunno," answered Farmer Corntossel. "How far kin you walk?"—Washington Star.

An architect remarked to a lady that he had been to see the great nave in the new church. "Don't mention names," the lady replied. "I know the man you refer to."—Tit-Bits.

First Boche—I tell you, we'll have those Allies on the run.

Second Ditto (mournfully)—We've got 'em on the run now, only we're in front of them.—Baltimore American.

Customer—You have placed all the large berries on top.

Fruit Peddler—Yes, lady. That saves you the trouble of hunting through the box for 'em.—Boston Transcript.

"You say your jewels were stolen while the family were at dinner?"

"No, no! This is a serious theft, officer. Our dinner was stolen while we were putting on our jewels."—New York Globe.

Professor—Sir, I regret to say that your daughter lacks temperament.

Mr. Hawkins—But, my dear professor, I've told you a dozen times to order whatever is necessary and send the bill to me.—Tit-Bits.

First Orderly Sergeant—You know, Bill, a man's mind gets pretty rusty after a few months of this life.

Second Orderly Sergeant—Righto! I haven't used my head for a thing lately except as a drill ground for my razor.—Judge.

Mrs. Nuritch—Edith, what are you reading?

Daughter—Petrarch's poems, ma.

Mrs. Nurich — Edith, haven't I warned you against the vulgar habit of shortening men's names? Say Peter Rarch.—Boston Transcript.

"How does Mr. Wombat play bridge?"

"I never saw him play bridge."

"Why, he was your partner only just now."

"True, but he appeared to be playing some game of his own invention. I couldn't fathom what it was."—Louisville Courier-Journal.

"Some say you can't get free professional advice."

"Can you?"

"To be sure you can. Your doctor will talk law as long as you will listen, and your lawyer will give you medical advice on any ailment you want to bring up for discussion."—Birmingham Age-Herald.

Taylor's Nautical Academy

Established 1888

Consular Building, Corner Washington and Battery Streets, Opposite New Custom House, San Francisco, Cal.

THIS OLD AND NOTEWORTHY SCHOOL is under the direct and personal supervision of CAPTAIN HENRY TAYLOR and equipped with all modern appliances to illustrate and teach any branch of Navigation.

The class of teachers of Navigation in the past have been those having simply a knowledge of Navigation, and Navigation only. Conditions have changed, and the American seamen demand a man as a teacher with higher attainments than one who has only the limited ability of a seaman. The Principal of this School, keeping this always in view, studied several years the Maritime Law, and is now, in addition to being a thorough teacher of Navigation and its kindred subjects, a regularly admitted Member of the Bar.

There is no standard of education required of a pupil entering the School, for no matter how ignorant the seaman may be, even in the rudiments of common education, Captain Henry Taylor will teach and raise him from the depths of ignorance to the height of the average well-informed man, and in a comparatively short interval of time.

THE LABOR CONFERENCE AT BERNE

America Not Represented---The Other Side of the Story

The leading article in last week's Journal was a story furnished by the Press Bureau of the American Alliance for Labor and Democracy. It gave the reasons why the representatives of the American Federation of Labor, now in Europe, refused to attend the International Socialist and Labor Conference at Berne Switzerland.

Of course there is another side to that story. It has just been interestingly related by Mr. Oswald Garrison Villard, Editor of the New York Nation, who was in Berne at the time the meetings were being held.

By special permission Mr. Villard's letter is republished herewith, and commended to an earnest perusal by the Journal's readers.

The Berne conferences are over, the dreaded meeting of Socialists and labor men from the opposing countries has taken place, and apparently Allied statesmen are drawing a long breath and hoping that they may have secured an internationally organized ally against Bolshevism. The gathering was organized as two distinct conferences, possibly with the vain hope of getting the coy American Federation of Labor to join in the trade-union conference, which met apart from the international Socialist conference. The two bodies seem, however, to have worked in the closest touch. In spite of the endeavors of Vandervelde and Anseele, the Belgian Socialists could not bring themselves to meet the Germans; on the other hand the Swiss Socialists refused to participate because they considered the whole affair not sufficiently radical. The delegates of the American Socialist party were absent, being unable, it is said, to secure the necessary French and British vises for their long delayed passports. Twenty-five countries were represented, however, and many of the best known leaders were present. The hot discussion of responsibility for the war, instead of wrecking the Socialist conference, seems to have served to blow off steam; the question was shelved and German Majority Socialists were formally admitted to participate in the reconstruction of the International. A similar spirit of conciliation seems to have been shown in dealing with Russia. Any international body dealing with political questions must be embarrassed to-day by rval claims and complaints. Despite such difficulties, the Berne meetings seem to have made progress with their main task of elaborating an economic and political programme to urge upon the Paris conference. Above all, they have provided for a continuance by both bodies of the international collaboration now at last resumed. The Socialist International Conference created a permanent committee with headquarters at Amsterdam, charged among other things to call the conference together again shortly; and the International Trade Union Conference simply adjourned to meet again in May.

Herewith are some first hand observations of the more notable personalities at the Berne Conference:

"The hall in which I am writing certainly fits a gathering of representatives of the proletariat, in its plainness and bareness. Here are ninety-one delegates sitting at tables laden with literature of propaganda, resolutions of committees, and the printed records of proceedings. The air is thick with tobacco smoke despite large and threatening signs forbidding smoking. At the sides of the room are long tables at which are crowded the representatives of the press, who outnumber the delegates. There is not a lackey, not a uniform, not a decoration nor title; there is no guard of honor at the door, no formality, no ceremonial. There are no long lines of automobiles before the building, no waiters in dress suits to serve tea, no gilt, no braid, no candelabra! This is simply a hall in which plain men are meeting, and not the barbarously ornate hall on the Quai d'Orsay.

"But there are greater differences than lie in the settings. For here is a real conference, in fullest publicity, with real debating, a conference of men and women, a conference of victors and vanquished alike, a conference not, it is true, without a President, for Kurt Eisner of Munich is here, but a conference which none the less is absolutely without official domination. Nobody in Berne is taking orders, and the gathering meets three times a day instead of twice in four weeks.

"The wisdom of restricting the conference to general lines speedily became apparent. To have attempted to settle all the territorial problems in a week's session was plainly impossible, so that the prime results of the conference remain the burying of the hatchet, the interchange of opinions, the reconstitution of the Internationale, and the giving to the world of the first international charter of labor and the various opinions expressed in the resolutions. But these results are well worth the effort.

"It is strange to see that compared to previous meetings of the Internationale this is a conservative gathering. It no longer represents the extreme Left, as it did five years ago, but is actually scorned as too conservative by the Swiss Socialists, the Russian Bolshevists, who are as unrepresented here as at Paris, the Italian Minority Socialists, and, of course, the Spartacus group in Germany. What will the situation be a year hence? No one can mingle with the delegates without being profoundly impressed by their simplicity, their straightforwardness, their earnestness, their breadth of view, and their international aspirations for a just, a wiser, and a better world.

"Though no Socialist myself, if I had the power to decide on which conference to rest the future of the world, I should unhesitatingly and with real joy, decide for this simple conference with its plain membership. With profound respect for Mr. Wilson's achievements in Paris. I would take the whole making of peace out of governmental hands, out of those of the Clemenceaus, Lloyd Georges, and Orlandos, and place it here in the hands of a democratic gathering of democratic people, the real representatives of those who have fought, bled, and died for their countries.

"The International Conference has brought together in one room a large number of the most interesting personalities in Europe. It was, of course, a source of regret that there were no representatives of the Swiss, whose guests the conference in a sense was, and one would have wished to see the Italian group which opposed the war so uncompromisingly. While it was well, in the matter of German and French disdisloyalty to the Socialist cause, to let bygones be bygones, it was none the less good to meet and hear the men who had inflexibly lived up to their principles. There was no Liebknecht to receive the plaudits of the audience, but the rather noisy hall grew still whenever Ramsay Macdonald spoke. This was not only the instinctive tribute to his superb presence, but an appreciation of his steadfast opposition to the war, maintained at so great a personal cost.

"In marked contrast to Ramsay Macdonald is another extremely interesting figure—Kurt Eisner. In his hirsute appendages and bald head President Eisner strongly suggests Lyman Abbott, even though he is not tall or thin; but he speedily made it clear that these were the only points of resemblance. He spoke without effort at oratory, with few gestures, with clear enunciation, and the conference listened in rapt attention. There was no doubt that he was a man of absolute courage and frankness, yet one meeting him on the street would set him down as a typical German pedagogue, the absent-minded professor dear to Fliegende Blatter. One would never guess him to be president of a very considerable country, and a successful revolutionist. The story of his revolution is so extraordinary that one naturally expects the leader to be a fiery young man of the Carl Schurz or Gustav Koerner type. He had been known in Munich before the attempted revolution of January 1918, chiefly as a feuilletonist and a frequenter of cafes. But it is said that when with a handful of men he stormed the Landtag in an impromptu manner the Government abdicated and royalty ran away with a speed incredible even in a comic opera. This may be true, but after all there is something about Eisner which explains his being the right man at the right moment. He was himself in doubt, when he left this morning, whether he would be President much longer. But his reception here did distinct honor to Bavaria.

"Every time that Frederick Adler took his place on the platform a thrill ran through the audience. He has all the appearance of a dry-as-dust pedagogue with a tremendous head of hair, stooped shoulders, and as marked prison pallor as if he had but yesterday left the cell in which he had so long awaited the executioner. As the lady beside me remarked, "He would have been dead long ago if Austria had had the courage to carry out his sentence." The

revolution freed him and he is now addressed by all the Socialist leaders as Comrade Adler.

"Two days before the end of the meeting, in walked an old man whose face was familiar. It was Eduard Bernstein, so long head of the Socialist Revisionists in Germany. He was full of his adventures in coming to the Conference over the worn-out railroads of Germany, but he seemed to exert no influence whatever.

"Kautsky, with his gentle, spiritual personality, is by far the most attractive figure among the Germans and Austrians. Troelstra, from Holland, is an extremely interesting figure. His refinement and culture are as obvious as his ability. Though this was a Labor as well as a Socialist Conference, it was only in the English delegation that one found men who had plainly had workshop experience. McGurk and Shirkie were unmistakably representative of the real sons of toil. Though inclined to be somewhat unreasonably obstreperous at times, they lent desirable color to the picture, for most of the Continental representatives were obviously of the agitator or Parliamentarian type.

"The French delegation lent expected warmth and Gallic piquancy. Several of them talked too often, but they bore themselves well and generously, except for a professional Alsatian, and their violent roaring at one another was at times a joyous relief from the monotony of the double translations. (As every speech had to be delivered three times, as is usual at international gatherings, it is no wonder that Esperanto is regarded with growing favor.) There is no doubt, however, of the intense rivalry between Longuet and Renaudel which splits the French delegation.

"On the platform sat Henderson, Branting, and Huysman; the Englishman eagerly heard; the Swede with more reluctance, as he speaks three foreign tongues equally badly and as presiding officer let proceedings drag unnecessarily. Huysman's keen, sensitive face was a delight to watch. His readiness to step in at just the right moment, with precisely the elucidating word or the exact compromise necessary stamped him as a most valuable secretary and leader. A Belgian with deep feelings, he is yet wholly without bitterness. Stuart Bunning also made two admirable speeches at critical moments. It was extraordinary how personal differences were set aside for the sake of the Internationale; under such circumstances it could not fail of success.

"Chief among the women were the two from England, Mrs. Philip Snowden, and Margaret Bondfeld, to whom Lloyd George denied a passport to go as a delegate to meet with the American Federation of Labor, despite her great services to the working women of England. Near the door, an interested spectator, sat Rosika Schwimmer, of Ford Peace Ship fame, temporarily Hungarian Minister to Switzerland.

"Two interesting men from Germany were frequently in the audience: first, Professor Wilhelm Forster, who held his chair in the University of Munich despite his resolute opposition to the war and his insistence that Germany was in the wrong. He is a strikingly handsome man of great ability, and is now Bavarian Minister to Switzerland by appointment of President Eisner. The second, whose remarkable revelations did so much to prove to the world at large the full guilt of Germany—Dr. Muehlon. He begs me to tell the American people that the condition of the children in Germany is dire beyond words, so many of them are dying from undernourishment and actual starvation. He begs us to do what we can to help the little ones whose condition will be still worse if the Allies continue the blockade and delay the peace. This I am the more willing to do as Dr. Muehlon's services to the United States and the war were such as precluded undesirable propaganda.

"It only remains to touch in this letter upon a subject which makes every American here thoroughly ashamed. I refer to the attack upon the conference by Messrs. Gompers, Walling, and Russell, to which the conference has officially replied through its officers, Hjalmar Branting and Arthur Henderson. It had seemed as if Mr. Gompers and his associates had done all that they could in the way of misrepresentation of those who do not agree with them as to policy, but in this attack they have clearly outdone themselves in vituperation and mendacity. To describe as Bolshevist a conference with which the Bolshevists will have nothing to do and which is attended by anti-Bolshevists from Russia and flooded by anti-Bolshevist literature, suggests mental derangement of a deliberate intention to falsify facts. It is a great pity that the United States should be unrepresented at this vital conference."

The shorter workday movement will continue to "move" as long as human nature retains its essential characteristic, i. e., "the desire for more." And it will continue to succeed as long as human nature itself succeeds.

Demand the union label upon all purchases!

JAPAN ON TRIAL.

Professor Veblen in a virile treatment of "imperialism" in the early days of the war, after showing the necessity of civilization's relieving itself of the incubus of imperial Germany, summed up his estimate of Japan as a political factor in the sentence: "And then, with imperial Germany supposedly eliminated or pacified, there would still remain the Japanese establishment, to which all the arguments pertinent in the case of Germany will apply without abatement; except that, at least hitherto, the dynastic statesmen of Japan have not had the disposal of so massive a body of resources, in population, industry, or raw materials." Now that the war is over, and peace is the theme of all nations, Prince Fuminaro Konoye, in Tokyo, is represented as "strongly objecting to a peace based on Anglo-American principles and interests." This representative of the younger Japan admits that democracy and respect for the interests of mankind will gain ascendency after peace is fully established, and that his country will be affected by this trend of thought. He urges, however, that Japan, before entering a League of Nations, should "insist upon the exclusion of economic imperialism and equal treatment of the yellow and white races." Here this intelligent student of world politics places his finger on the two critical points in the coming relations between the East and the West. Preliminary to any final settlement of the question of economic imperialism, which will profoundly affect the destiny of Japan from without, the world will be interested in the struggle between democracy and political imperialism as affecting Japan from within.

Historically, of course, Japan has an age-long heredity of autocracy, her emperors springing lineally from the loins of the gods, which is a fact of some importance when we remember that only a very limited part of the people have the franchise. There is but one way for a people to grow out of autocratic habits of mind whether of domination or of sequacity, and that is through democratic education. Democratic education is impossible without experience in self-government.

Therefore it is perhaps unfortunate for Japan that when she decided to occidentalize she did not go to school to America rather than to England. The Briton gives only a divided allegiance to democracy even in politics, while in the social domain the rejection of caste is to be construed wholly in a Pickwickian sense. The lurid, oriental brand of imperialism exploited by Disraeli, for example, hardly urged Japan very far along the road toward republican ideals. Hence we have little reason to be surprised that, with her constitutional monarchy borrowed from England, Japan readily fell a victim to the smart and swagger theories of Germany. If she would make the West respect her, let her go to war; if she did go to war, let her cut Russia's throat first and make her declaration of belligerency afterward. Japan has learned Western ways like an uncommonly clever youngster, and like all precocious pupils she has learned much that she may well forget. Her friends would like to see her get some other line of ambition than that of creating "spheres of influence" in China, Manchuria, Siberia, and the islands of the sea. Narrowness of domain is no valid excuse for imperial acquisitiveness. In a civilized world a nation's children can make homes for themselves in other lands without their government toddling after them. This was one of the Kaiser's maniacal dreams; he thought he could reach across the Atlantic and keep his departed Germans more German than American.

But Japan is still young and can readily learn a better way. Let her espouse the League of Nations with all her heart, and let her insist upon democratic equality for all national groups, including her own, and then she will not only shine in interior excellence by right of her success in self-government, but she will in turn be the great teacher and exemplar of the Orient, like an elder brother leading the awaking peoples into the peace and prosperity of a united family of nations.—The Public.

NORWAY'S MERCANTILE SHIPPING.

Shipping is one of Norway's chief sources of income, and carrying for other nations has offset the foreign trade balance which is always against that country. Prior to the war there were but three nations whose merchant fleets were larger than Norway's, namely, Great Britain, Germany, and the United States. At the end of 1913, Norway had a merchant fleet of 2,626,708 gross registered tons. During the war this has been engaged for the most part in carrying for the Allies, and the losses in tonnage have been enormous. A total of 829 ships, equal to 1,240,055 gross registered tons, have been sunk, or in other words, the gross loss has been more than 47 per cent. of the entire fleet. However, every effort has been made to acquire new ships to replace those lost, and the tonnage at the end of 1918 was something over 2,000,000 gross registered tons, the net loss during the war therefore being reduced to between 20 and 25 per cent. Furthermore, an agreement has been made with Great Britain whereby the British Government sanctions delivery from the British shipyards to Norway of 780,000 tons during the three years following the close of the war. Owing to lack of material and inadequacy of the Norwegian yards for building ships of the size desired, Norwegian yards have confined themselves during the war to building small wooden vessels.

Norwegian shipping is not only engaged in carrying for other nations, but lately lines have been established running from this country to all parts of the world. Previously England and Germany controlled the greater part of the shipping trade to Norway, but, like the other Scandinavian countries, Norway is preparing to take her shipping trade into her own hands through her direct shipping connections with other countries overseas.

"If co-operation is successful, it will work a beneficial social and economic revolution of the widest scope—a revolution, moreover, so conducted as to leave no heritage of bitterness behind."—Bishop Lightfoot.

WEEKLY NEWS LETTER

Contributed by American Federation of Labor

Foreign Competition World-wide Bugaboo.

The Manchester (England) Cotton Factory Times does not accept the claim of British cotton manufacturers that hours can not be reduced until an international agreement adopts a standard working day.

This is put forward by the manufacturers as eminently fair, says the Cotton Factory Times, as it would prevent one nation being placed in a worse economic position as regards labor than others in the competitive markets of the world.

"It is the old bogy of foreign competition, decked out in new phrases, an ingenious attempt to sidetrack the workers into a cul-de-sac. Wages and conditions of work are not the sole factors in foreign competition, otherwise this country could never have obtained the pre-eminence it holds in the world to-day in cotton manufacture. Every ounce of cotton has to be brought thousands of miles across the sea, and four-fifths of the manufactures from cotton have to be carried similar distances to find markets.

"Hours of labor here have been much less than in any foreign country until recent years, when America overtook and passed us in this respect. Whenever factory hours have been shortened in times past foreign countries have not been consulted, and there is no real reason now why they should be.

"The expansion and prosperity of the cotton trade has been due very largely to superior organization, improvements in machinery, and increased speed, and last but not least, the trained skill of the Lancashire operatives. It is safe to say that the operatives themselves have derived the least of the benefits from all these advantages, which have been divided mainly between the mill owners and the consumers.

"It is within the mark to say that each operative on the average turns out twice the production to-day that he did years ago. Some of this increased productivity ought to have been reflected in the reduction of working hours, yet they have been very little reduced in the half century of continuous progress and development in the technique and volume of the trade. On this matter of a shorter working week the workers will have to work out their own salvation, and if progress is to be made they require at once to be setting their house in order and preparing their plans."

To Extend People's Rule.

Extension of the people's rule is urged in a forty-eight-page booklet, written and being circulated by George H. Shibley of the Research Institute of Washington, D. C., who has been active for years in the campaign for direct legislation.

The author says the time is now to complete the transition to full and unstinted self-government by the people, and to include reform of the industrial system. Tentative bills are presented to make the necessary political changes in national, State and municipal affairs.

Proportional representation, it is predicted, will be the coming system of delegated power, with a veto power through the referendum, and a power of direct initiative in combination with a reserved right in the voters to recall their representatives.

Industrially the idea is that taxation will largely be through the progressive income tax, the progressive inheritance tax, with a public income from land values. In a generation practically all of the land values apart from the fertility, the standing timber and improvements should go to the public, is the proposal.

It is urged that widespread co-operation among the nonpartisan progressive forces should take place with a view to capturing the several parts of the Federal system in next year's Presidential campaign.

The author calls attention to declarations by the American Federation of Labor in favor of a Presidential primary law and in favor of direct primaries.

War Wages Swallowed.

In urging the necessity for putting "the people to work," the Information and Education Service of the Department of Labor says that despite high wages the percentage of saving was smaller during the war than in the pre-war period.

"The belief is not well founded," it is stated, "that the workers were so well provided for during the war that they could afford to remain idle a long time while peace pursuits were being leisurely resumed. They are not well prepared for undergoing the hardships caused by unemployment. In truth, they are poorly equipped to face adversity.

"A sudden plunge from prosperity to want will not be met with as good grace as if there had been no prosperity. People have left the barren fields. They are not disposed to return to them merely because some slight circumstances prevent their living as was their wont. The black curtain cannot be lowered over the land of plenty in the belief that the people will be kept out. They will simply tear aside the curtain and walk in. That's the peculiar habit of people who know they want something and know where it can be found."

Labor Not Property.

Organized labor in Illinois is again urging the passage of an anti-injunction law. The workers show that the strike injunction theory rests on the claim that labor is property, and against this theory they quote this statement by the workers' attorney before the United States Supreme Court in the case of the Tri-City Central Trades Council versus the American Steel Foundries:

"If the argument of complainant is logical—operation of plant interfered with because of picketing, gives a property right—then what is to prevent the steel mill from selling the 'property right' it has in its workingmen to another company? The fallacy of such a position is too palpable

World's Workers

The Lace and Net Finishers' Association of Nottingham, England, recently pledged themselves during the next 10 years to refuse to trade with any firm in the Nottingham district which employed or reinstated any enemy alien who had been extradited or interned up to the close of the war, or who had left England during hostilities, or any firms who employed enemy aliens, other than those who had been allowed to remain in Nottingham during the war.

The question of the new British Co-operative Development bonds which have been sanctioned by the Treasury to the extent of £2,500,000, was raised by many delegates at the recent quarterly meeting of the Co-operative Wholesale Society. Mr. A. W. Golightly, a director, replied that the money would be required for the development of agricultural land recently purchased by the society in Great Britain as well as for colonial expansion. As a first step in this direction the meeting proceeded to sanction the purchase of a plantation in Ceylon and more freehold land in Accra, West Africa.

The Italian General Confederation of Labor has resolved that none of its members shall accept appointments to any of the commissions created by the Government to deal with after-war problems. The Socialist party congress carried a similar resolution dealing with Parliamentarians. "The question," says the Rome correspondent of "Le Populaire," "is this: Are the Government nominees, with the approval of the Socialist representatives, to be able, at the price of certain concessions, to prop up the tottering privileges of a decadent society, or is the proletariat to be left free to establish its rights in the society of to-morrow?" As Turati, one of the Parliamentarians who had already accepted a Government appointment, desired that the opinion of members should be got, a party referendum has been taken. Another matter submitted is the war attitude of the party. We have not the result of the referendum, but it is stated that there is no doubt that the party will stand by the conference's decision, and will endorse the party's war attitude.

Members of the British Workers' Union, numbering several thousands, together with representatives of the National Association of Discharged Soldiers and Sailors, recently marched in procession to the Ministry of Munitions, where a deputation was received by Sir Thomas Munro. A demand was put forward for a minimum wage of 60s. a week for men in employment, and 50s. a week for those out of work until employment was found. A protest was also entered against the discharge of disabled soldiers and munition workers without provision being made for them, or without employment being offered them. In reply the deputation was informed that while no promise could be made as to the dismissal of employees, the ministry had the matter under consideration, and it was hoped some arrangement would be come to in course of three months. It was also stated that as far as possible women would be retained. The deputation was also reminded that the cotton operatives in Lancashire had been receiving only 24s. a week during the war.

LAXCARIN

Is a remedy for the permanent relief of all kinds of stomach trouble. Helps digest and assimilate your food, giving you good, rich blood, neutralizes the excessive acids, which causes that miserable, sour, gassy, bloated feeling after eating, nervous indigestion, belching, etc., relieves you of constipation, giving a freedom of action of the nerves, and proper circulation of the blood. Contains no harmful drug, no alcohol.

Prompt results in case of long standing, when everything else you have tried has failed. One box will convince you of its merits.

Sold by The
LAXCARIN PRODUCTS CO.,
Price One Dollar.
Dept.—E99 Pittsburgh, Pa.

Pacific Coast Marine.

Sudden & Christensen have announced the closing of their Portland branch office and the office force of the firm is leaving for San Francisco.

The United States Steamboat Inspectors at Seattle have suspended the license of Captain Lemuel C. Smith, master of the tug Monitor, for a period of four months. This penalty was imposed on the showing that Captain Smith raced his tug close to water front piers.

A decline in lumber charter rates, the first substantial ones since the war began, is noted in several fixtures reported at Portland during the week. Two vessels have been chartered to carry lumber from the Northwest to the United Kingdom at $50 and another at the same rate to go to Buenos Aires. War rates for such charters were up to $70 a thousand.

At the launching of the new wooden steamer "Aspinhill" at the Coast Shipbuilding Company of Portland, during the week, instead of christening the vessel with the usual "water," a $20 gold piece was dropped into a bottle for the Armenian relief fund. The "Aspinhill" is the seventh hull of the Coast Company and with her launching but one more ship remains on the ways at that yard.

Whaling operations off the Lower California coast will be discontinued by the whaling fleet of the International Packing Corporation until next November, it was announced during the week. During the season just closed the whaler San Diego killed six humpbacks, from which an average of twenty-six barrels of oil were obtained. The whales killed averaged from forty to sixty feet in length.

An agreement, ending a controversy of several months' standing, was reached by the U. S. Railroad Administration, the Seattle Port Commission and Seattle steamship lines during the week when it was agreed that handling charges over Seattle wharves be divided equally between the Railroad Administration or the Port Commission and the steamship operators. Sixty cents a ton will be charged up to the dock and an equal amount to the steamship. Up to the present the railroads and other operators of wharves have borne all of the handling charges.

Miss Isabella Becker was the sponsor at the launching of the "West Aleta" at the Schaw-Batcher yards at South San Francisco on Saturday, March 15. At the same time, when the "West Vaca," launched four months ago, went on her trial trip on the measured course in the bay off California City. The "West Aleta" is an 8800-ton freighter, 427 feet length and draft of twenty-nine feet. For the past four months the Schaw-Batcher yard has launched one ship a month. Miss Becker, who christened the "West Aleta," is the daughter of General Manager A. L. Becker.

John Walling, a seaman, has filed a libel suit for $9500 in the Federal Courts at San Francisco against the Emergency Fleet Corporation and the bar "Moshulu," one of the vessels operated by the Federal Board. He was boatswain on the "Moshulu," and says while the vessel was at Melbourne he was severely cut with a rusty knife by an apprentice seaman. The master of the vessel was informed of his injury immediately, he says, but he was not given medical treatment until fifteen hours later. This caused blood poisoning to set in, according to the complaint, and the plaintiff was rendered permanently lame.

A fair majority of the contractors of San Francisco are now in the habit of bidding for Harbor Board work. During the past week at the regular weekly meeting of the Board twenty-three firms and individuals appeared and submitted bids for the construction of the new fish market at the foot of Taylor street for the Brizoni Fish Company. Mason & Morrison's bid for $10 477 was accepted. The contract for extending pier 43 was awarded to J. D. Hannah. This work will cost the State $38,437. There were five bidders. The paving of pier 31 was awarded to the Clark & Henry Co., which submitted the lowest bid of $12,991.50. There were five bidders.

The barkentine "E. R. Sterling," Captain R. M. Sterling, which sailed from San Francisco for Sydney recently, is breaking all existing records for fast travel of a windjammer. According to wireless received the ship averaged 206 miles a day for the first ten days of the voyage. If the same speed can be kept up to Sydney, the trip will be made in thirty-five days, or about one-half of the usual average passage of seventy days. The record for this passage is held by the old "Glory of the Seas." The trip was made twenty-five years ago, and the old clipper was commanded by Captain J. N. Knowles. He negotiated the passage in thirty-nine days.

The chief engineer of the motor-ship "City of Portland," of the Charles R. McCormick fleet is authority for the statement that the vessel driven by the internal combustion engine has come to stay and will eventually drive the steam-propelled craft from the seas. The "City of Portland" has arrived at San Francisco from Manila after a successful voyage of only thirty-four days and the chief engineer said his Bolinders were in such perfect order and were running so smoothly that all that was needed was a supply of fuel for a return trip. The vessel made the best previous transpacific record when it crossed from Columbia River to Shanghai in thirty-five days. No trouble of any kind was encountered in the way of engine breakdowns and the engines never missed an explosion during the two voyages.

That the Japanese fishing firm of M. K. Konda & Co. plans to enter the Lower California fisheries trade on an extensive scale is indicated by the large fishing fleet now being assembled at Ensenada. The Japanese fishing schooner "Toni Maru," carrying sixty-seven Japanese salt water and abalone fishermen, arrived at Ensenada recently from Yokohama after a thirty-two-day passage. All the fishermen are to be employed by the Konda Company in the fresh fish, lobster and abalone trade along the Lower California coast. The dried fish and abalone will be shipped to San Francisco for exportation to Japan and China. The fleet of the Konda Company now operating off the lower coast consists of the Japanese schooners "Toni Maru" and "Ramona"; two ocean-going tenders, the "Sun" and "Satsuki," and a fleet of ten fishing smacks.

Consideration of the proposed naval base on San Francisco Bay, which has been held in abeyance during the war, is expected to be resumed when the House Committee on Naval Affairs reaches San Francisco on its tour of inspection on the Pacific Coast. The committee, which left Washington on March 8 to look over the navy yards and proposed sites for aviation fields, has allotted March 21 to 23 to San Francisco Bay. It has been announced that the time is to be divided between San Francisco and Oakland, which is taken to mean that one of the purposes of the visit to the bay region is to the familiarize the members of the committee with the advantages and disadvantages of the various sites proposed for the naval base. The general purpose of the committee's tour is said to be to obtain first-hand information of conditions and needs of naval stations on the Pacific Coast in preparation for the handling of whatever legislation affecting them may be introduced in the next Congress. The itinerary announced is: Riverside, March 12; San Diego, March 14 to 17; Los Angeles, March 18 to 20; San Francisco, Oakland and Mare Island, March 21 to 23; Portland, March 25 and 26; Tacoma, March 27; Seattle, March 28.

Direct service between San Francisco and Europe may soon be established by a number of foreign steamship lines, according to the foreign trade department of the Chamber of Commerce. During the past two months representatives of these concerns have visited San Francisco and discussed the opportunities of placing vessels in this service, and they wished to be assured that there will be sufficient return business to warrant the operation, said C. P. Converse, director of the department. He said: "We are giving every possible encouragement to these concerns and believe that there will be a vast resumption of business in the near future, and that it will be less than a year before we are engaged in a big volume of business direct to Europe. All three sections of Europe are being considered in the extension of the new ship service made possible by operating through the Panama canal. The Baltic and North sea ports, which include European Russia, Norway, Sweden, Holland and Denmark, is one section. The channel ports, which take in Belgium and the British and French channel ports is another, and the third consists of Atlantic ports, such as Great Britain, France, Spain and Portugal. The foreign lines are not taking anything for granted and are feeling their way slowly before putting on ships. We are assured, however, that the opportunities of the Pacific Coast are proving sufficiently attractive to draw to us a number of lines that never operated here before. And we hope to have all the necessary port and other facilities ready when the ships come."

F. R. WALL, who was for many years an officer in the United States Navy, is now practicing marine law in San Francisco. He gives claims of all seafarers careful attention. 324 Merchants Exchange Bldg., 3rd Floor, California St., nr. Montgomery. Phone, Sutter 5807 (Adv.)

SILAS B. AXTELL, attorney for the Eastern & Gulf Sailors' Assn., Marine Cooks & Stewards' Association, Marine Firemen, Oilers & Water Tenders' Union, has moved his offices to the ground floor of the Washington Building, One Broadway, New York. Entrance room J, ground floor. Consultation and advice on all matters relating to enforcement of the Seamen's Act, claims for Compensation or damages, will be given free of charge as in the past, by Mr. Axtell and his expert assistants, Mr. Vernon S. Jones and Mr. Arthur Lavenburg. (Adv.)

The Seamen's Journal

Published weekly at San Francisco
BY THE
SAILORS' UNION OF THE PACIFIC

Established in 1887

PAUL SCHARRENBERG.....Editor
S. A. SILVER.....Business Manager

TERMS IN ADVANCE.
One year, by mail - $2.00 | Six months - - - $1.00
Advertising Rates on Application.
Business and Editorial Office, Maritime Hall Building, 59 Clay Street, San Francisco. Telephone Kearny 2228.

Changes in advertisements must be in by Saturday noon of each week.

To insure a prompt reply, correspondents should address all communications of a business nature to the Business Manager.

Entered at the San Francisco Postoffice as second-class matter. Acceptance for mailing at special rate of postage provided for in Section 1103, Act of October 3, 1917, authorized September 7, 1918.

NOTICE TO CORRESPONDENTS.
Communications from seafaring readers will be published in the JOURNAL, provided they are of general interest, brief, legible, written on one side only of the paper, and accompanied by the writer's name and address. The JOURNAL is not responsible for the expressions of correspondents, nor for the return of manuscript.

WEDNESDAY, MARCH 19, 1919.

INDUSTRIALLY "FREE"!

The reconstruction program of the United Brotherhood of Carpenters and Joiners of America has twenty-two separate and distinct demands or proposals. Number 11 reads as follows:

The Seamen's Act shall not be repealed, but shall be strengthened wherever found necessary to insure the American sailor being an industrially free American.

Good for the carpenters! They know exactly what ails the polished gentlemen who talk so glibly about the repeal of the Seamen's Act

The organized seamen of America have never asked for any special privileges. All they want is the same rights and privileges, consistent with the nature of their calling, that are accorded to American workers in shore occupations.

American workers ashore have the right to quit their jobs. There is no penalty of imprisonment for doing so. American seamen insist upon the same right when their ship is in a safe harbor.

Americans who earn their livelihood on dry land are protected against coolie labor competition. A Chinese Exclusion Act and a "Gentlemen's Agreement" with Japan cover this point for the workers ashore. American seamen demand equal protection. The Seamen's Act, if properly enforced, would accomplish the same result. But the administrative forces and the courts have vied with each other to misconstrue and thus nullify the intent of the law.

American seamen can and will work out their own industrial salvation when they are "industrially free." And it is surely gratifying to know that our friends, the carpenters, appreciate the difficulties of the seamen's status. It is still more gratifying to learn that this powerful union of mechanics (the second largest numerically in America) stands squarely behind the seamen to retain their newly won freedom.

Industrial liberty is bought by "eternal vigilance" just as much as political or any other kind of liberty. Let us be ever on the guard.

A LESSON FROM HISTORY.

When one reads about the insistent demands of certain nations at the Paris Peace Conference for "territory" and "more territory" the question naturally suggests itself: Is history about to repeat itself?

Doubtless having in mind this very thought an American publicist has just penned these pertinent and significant sentences:

In the months preceding the Congress of Vienna (1814) men were holding fair dreams of a permanent peace, an international tribunal, and partial disarmament, just as they are today. How these dreams were realized is best expressed in the words of the Secretary of the Congress, Fred. von Gentz: "The grand phrases of 'reconstruction of the social order,' 'regeneration of the political system of Europe,' 'a lasting peace founded on just division of strength,' were uttered to tranquillize the people and to give an air of dignity and grandeur to the solemn assembly; but the real purpose of the Congress was to divide amongst the conquerors the spoils taken from the vanquished." To understand "why the hopes of so many enlightened men, but more or less ignorant of Cabinet secrets, have been so cruelly disappointed, one must know the designs which the principal Powers had in presenting themselves on this great battlefield." What these designs were, how the Powers ignored the rights of the peoples, and cynically remade the map of Europe to suit their dynastic and territorial ambitions, is known to even the casual student of history. The result was a hundred years of intermittent war for Europe!

Truly, it sometimes seems as if the old game of "tranquillizing the people" is again being played with vim and vigor. So far as known "The Secret Treaties," entered into during the war, have not been repudiated. Moreover, it is becoming painfully evident that there are influential politicians in all countries who lack the imagination or character to rise above the old order. These men can think only in terms of national rivalries and ambitions. It follows, that if we are to have a just peace and a League of Nations that is at least worthy of the name, liberal forces will have to bring constant pressure to bear. In brief, those who stand for a new order of things will have to be "on the job" day and night, in season and out. Otherwise, it is more than likely that history will do the same thing over again.

The new Joint Board of Conciliation to which editorial reference was made in last week's issue has been duly organized at San Francisco. Following are the six members of the Board: J. H. Rinder, representing the Division of Operations of the Shipping Board; Jas. H. Bennett, representing the Waterfront Employers' Union; F. M. Barry, representing the Managers of Shipping Board vessels; John H. Tennison, representing the Sailors' Union of the Pacific; John Clark, representing the Marine Firemen, Oilers and Watertenders' Union of the Pacific; Eugene Steidle, representing the Marine Cooks and Stewards' Association of the Pacific Coast.

President Wilson in his address in Italy caused some surprise by his statement to the effect that "the working classes of the world are the foundation of society." It has not been the custom of the "upper" classes in the old world to look at this situation from that point of view. They have been in the habit of thinking that they were the "salt of the earth" and the rest of the population was what was left in the bottom. There is nothing more true than the statement that President Wilson made, and there is little doubt that his statement has left a lasting impression.

A JOB IN GREAT DEMAND.

A supercargo is "an officer or person on a merchant ship whose duty is to manage the commercial concerns of the voyage." This definition of a supercargo seems necessary because few real seamen of the present generation have ever been shipmate with such a person. Like the dinosauria the supercargo has become practically extinct. The Shipping Board, however, has set out to revive the supercargo and according to Lieutenant J. Frew Hall, employment officer, Division of Operations, over twelve thousand applications for these positions have been filed since the board established a course of training for those aspiring to hold down this particular job. Considering this great rush of applicants it is little wonder that the aforesaid employment officer has been compelled to issue the following notice:

It is believed that sufficient men have been obtained to fill all immediate requirements by the Shipping Board, but such additional Supercargoes as may be needed from time to time, will be selected from those applications already on file. The application list has been closed and only vacancies of other character are now being handled.

Up to the present 270 have been graduated from the school which is being conducted at 1311 Massachusetts avenue, Washington, D. C., under the direction of Captain E. S. White.

Of that number 150 have gone to sea, and thirty are awaiting orders. The rest have been eliminated because of failure to pass mental and physical examinations. While under instruction students are paid at the rate of $100 per month.

The course includes detailed instruction in the duties of a supercargo; lectures on the Lloyds Association, marine insurance; classified tonnage; trimming a vessel; plan of ship; types of vessels; Federal aids for shipping facilities; exports and stable commodities for world tonnage; stowage plans; foreign port conditions; depths and drafts of water at foreign docks; running and anchor lights and buoys.

James H. Wilson, son of the Secretary of Labor, has just joined the Shipping Board's school for supercargoes. Previous to his enrollment in the school, young Wilson had been a private in the army and had served eight months with his command in France.

"A few years ago," says the "Municipal Reference Library Notes," published by the New York Public Library, "the more important editorial offices of this country received regularly, without charge, a cleverly written little publication entitled "Concerning Municipal Ownership." This magazine preached the failure and inefficiency of municipal undertakings. About three years ago it ceased to appear. Soon thereafter appeared the "News Letter" of the National Public Ownership League of America, which is now the only publication of its kind in the field. This league, which is a non-partisan educational movement for the advancement of the public ownership and democratic control of public utilities and natural resources, also publishes bulletins prepared by experts on the various phases of public ownership and delivers a free weekly press service to hundeds of magazines and newspapers. Thus the forces of public ownership have met and conquered the insidious propaganda which for years sought to discredit the public ownership of public utilities.

"MAKING THE WORLD SAFE," ETC.

New York's harbor has experienced another tie-up by the strike predicted several weeks ago. The men rejected the award made by V. Everit Macy, head of the Civic Federation and holder of some $25,000,000 or so in Standard Oil. Macy simply couldn't see, as the men saw, their right both to a shorter day and higher wages.

Next on the program is the strike of the electric linemen, installers and telephone operatives affiliated with the International Brotherhood of Electrical Workers. Over 95 per cent. of those organized—on the Pacific Coast, in New England and in various cities between the two oceans—have voted to go out to abolish discrimination and win the right to collective bargaining. Strange and sad to relate, their adversary is Postmaster General Burleson, who forbade the telephone and telegraph companies to deal with the unions.

We have won the war "to make the world safe for democracy" but democracy is not equipped with a self-starter, nor is it self-operating.

Eternal vigilance is still the price of liberty. And if we want liberty and democracy at home we must at all times be prepared to fight for it.

In the final analysis the condition of the workers in a Republic inevitably will be what the workers make it—through organized self-help.

THE DRIFT OF THE TIDE.

An agent of the Department of Labor returned to Washington, recently, from a trip through eight Middle Western States. He intimated that big employers who have been dealing with the unions are now saying that they are going to break off, and they are going to "put the unions out of business." One of the biggest employers of union labor in the State of Maryland made the same threat last week. Not more than a handful of the 130 mayors of American cities who gathered at the Nation's capital recently to talk over the employment situation showed the slightest interest in establishing the right of collective bargaining. Mayor Rolph of San Francisco included that proposition in a resolution which demanded that American ships be built in America rather than in the Orient, and which demanded that Congress be called in special session to deal with industrial problems. His resolution was defeated.

Whither are we drifting?

The Navy League of the United States is to be congratulated for giving special publicity to an exceptionally well written article by Attorney Silas B. Axtell, of New York, in defense of the Seamen's Act. Whatever may have been the intent of the Navy League's founders those who now manage its publicity seem to realize that sea power was never won or held by ships alone. As in the days of Captain Mahan, "sea power is still in the seamen," and as so tersely said by Andrew Furuseth: "Ships are but tools in the hands of Seamen."

Demand the union label. If you are the right sort of a union man one suggestion of this sort is all that is necessary.

OUR EMBARKATION SERVICE.

The Proud Record of an Invisible and Unsung Army Which Worked Wonders Along the Hoboken Front.

The lucky boys with the gold chevrons may "give them the laugh"—these officers and men who go about with only the colorless silver stripes on their arms; but there is a good deal to be said for them, especially over in Hoboken, where silver-stripers abound. "Bunk heroes"—"too proud to fight"—"rocking-chair soldiers," and other remarks are applied to them, says a writer in the New York Evening World, taking up the cudgels in their behalf; but, just the same, they did their bit in winning the war right there in Hoboken by sending over two million fighters to bend and break the Hindenburg line, to drive through the Argonne, and otherwise produce a solid American impression on the Hun. "For these are the men of Uncle Sam's Embarkation Service," says the writer, "unsung, uncheered, undecorated." He continues with words that ought to leave them no longer "uncheered," and mentions rumors that they are not long to remain undecorated:

When the men of the A. E. F. were winning undying glory at the Marne, Chateau-Thierry, St. Mihiel, and the Argonne, these silver-chevroned soldiers were interned on the Hoboken shores.

Instead of kicking holes in the Hindenburg line, they were home manipulating troop-trains, ships, and men, often working twenty-four hours a day in order to keep unbroken the khaki stream that flowed eastward to the coast of France.

The war-record of the Embarkation Service is something one seldom hears about. The names of its members seldom got into the papers, they never killed Germans, no brilliant war-medals dangled from their obscure bosoms—and they wore silver chevrons.

Now what romance can one possibly attach to a silver chevron?

Answer: None whatever.

However, the achievements of this invisible and unsung army are slowly winning recognition and approval in Washington.

The first sign of this came a few days ago when Secretary of War Baker announced that Maj.-Gen. David C. Shanks, commanding officer of the port of embarkation, had been awarded the Distinguished Service Medal.

The official citation has reached the port of embarkation—or debarkation, as it is now called—in Hoboken. It reads as follows:

"Maj.-Gen. D. C. Shanks, U. S. A., is awarded the Distinguished Service Medal for especially meritorious and conspicuous service in the adminstration of the Port of Embarkation, Hoboken, N. J., in connection with the shipment of troops overseas."

The Evening World has learned from a reliable source that other decorations will soon be filtering through from Washington in the general direction of Hoboken. A wireless rumor to this effect has reached the Embarkation Service, but no one can be found who will admit that he knows where it came from.

The men of the Embarkation Service, from Major-General Shanks and Brig.-Gen. George H. McManus down to the soldiers who guard the gates to the piers, are slow to admit that they have played a great part in the war, but they cheerfully admit that they got no nearer the fighting front than the gangway of a transport.

"The work here had to be done by somebody, I suppose," said Capt. King W. Snell, aid to General McManus, who is troop movement officer. "Otherwise the 1,795,411 officers, men and nurses shipped to France by the Embarkation Service might be still waiting for transportation. But who wants to be interned in Hoboken when the main show is three or four thousand miles away? It was like standing outside the big tent and punching tickets to a three-ringed circus. We worked like dogs and never got a chance to see the main performance."

This attitude would probably be found to be that of the 2,400 officers and 24,000 enlisted men engaged in the Embarkation Service.

They are all glad to have been able to do their bit, but most of them look at their silver chevrons and feel that they've been cheated out of something.

During the entire period of embarkation, from May, 1917, to November, 1918, the average number of American soldiers placed daily on French soil was 3,500.

In a single day—the last day of August, 1918—46,214 doughboys were shipped out of the port of New York. This is claimed as a world's record for a single day's shipment of troops.

The figures for the previous month, July, are held by the Embarkation Service to constitute another world's record in troop transportation. In this month 268,117 officers and men were put aboard vessels and sent overseas by the Embarkation Service.

This was the highest number reached during the period of the war. The number of men

OFFICIAL.

SAILORS' UNION OF THE PACIFIC.

Headquarters, San Francisco, Cal., Mar. 17, 1919.
Regular weekly meeting came to order at 7 p. m., Joe Faltus presiding. Secretary reported shipping improving with large number of members ashore.

JOHN H. TENNISON,
Secretary pro tem.

Maritime Hall Bldg., 59 Clay Street. Tel. Kearny 2228.

Victoria, B. C., March 10, 1919.
No meeting; shipping slow; members scarce.

J. ETCHELLS, Agent.

Room 11, de Cosmos Block, 1424 Government Street.

Vancouver, B. C., March 10, 1919.
Shipping fair; prospects good.

W. G. MILLARD, Agent.

58 Powell Street E. P. O. Box 1365. Tel. Seymour 8703.

Tacoma Agency, March 10, 1919.
No meeting. Shipping and prospects medium.

H. L. PETTERSON, Agent.

2016 North 30th St. Tel. Main 808.

Seattle Agency, March 10, 1919.
Shipping dull.

P. B. GILL, Agent.

84 Seneca St. P. O. Box 65. Tel. Main 4403.

Aberdeen Agency, March 10, 1919.
No meeting. Few men around; shipping fair.

ED. ROSENBERG, Agent.

P. O. Box 280. Tel. Main 557.

Portland Agency, March 10, 1919.
Shipping good; prospects good.

JACK ROSEN, Agent.

88½ Third Street. Tel. Main 6013.

San Pedro Agency, March 10, 1919.
Shipping fair.

HARRY OHLSEN, Agent.

128½ Sepulveda Bldg., Sixth St. P. O. Box 67. Tel. 137 R.

Honolulu Agency, March 3, 1919.
Shipping poor; prospects poor.

JACK EDWARDSON, Agent.

P. O. Box 314. Tel. 2526.

MARINE COOKS' AND STEWARDS' ASSOCIATION OF THE PACIFIC COAST.

Headquarters, San Francisco, Cal., Mar. 13, 1919.
The regular weekly meeting was called to order at 7 p. m., Eugene Burke in the chair. Secretary reported shipping slow, plenty of men ashore.

EUGENE STEIDLE, Secretary.

42 Market Street. Phone Kearny 5955.

Seattle Agency, March 6, 1919.
Shipping improving.

LEONARD NORKGAUER, Agent.

Grand Trunk Dock, Room No. 203; P. O. Box 214. Phone Main 2233.

San Pedro Agency, March 5, 1919.
No meeting. Shipping good for cabin, messmen and galleymen; few cooks ashore.

JOE MACK, Agent.

613 Beacon St. Phone Sunset 336. P. O. Box 54.

DIED.

James J. Marmion, No. 2301, a native of Ireland, age 29. Died at sea on board the S.S. "Maui," Feb. 10, 1919.

A compromise solution of the wooden ship insurance problem is believed to have been found, which may be expected to yield satisfactory results for the time being; that is to say, until sufficient data have been secured to rate the wooden ships on their merits. In other words, it has been tentatively arranged that the market should cover the cargo for ordinary claims to the limit of $800,000 on each bottom, provided the whole of the hull insurance is carried by the Emergency Fleet Corporation. This arrangement is to apply to non-perishable cargo only, shipped in wooden ships of the better class—nearly all built on the Pacific Coast—which have been favorably passed upon by the underwriters' surveyors. The arrangement, it is understood, will exclude temporarily all ships whose status is at present in dispute, or about seven of the ten types of wooden ships built for the Shipping Board.

OUR WASHINGTON LETTER.

(By Laurence Todd.)

Col. Raymond Robins, formerly in charge of the American Red Cross organization in Russia, has at last brought the truth about the Russian workingmen's and peasants' government directly before the Senate Judiciary subcommittee, which is supposed to be investigating the extent of Bolshevik agitation in this country. Senator Overman of North Carolina, chairman of the subcommittee, who repeatedly declared that he would not permit Robins or other "Bolsheviki" sympathizers to "get any advertising" by appearing as witnesses, was compelled to back down from that position. Albert Rhys Williams, former Russian correspondent of the New York Evening Fost; John Reed, former correspondent of the Metropolitan magazine; Louise Bryant, former correspondent of the Philadelphia Public Ledger, and Bessie Beatty, former correspondent of the San Francisco Bulletin—all have now testified. And Robins yesterday and to-day eclipsed them all by his dramatic and convincing account of the events and the influences that tore down Kerensky and put up the Soviet as the governmental power in Russia.

Raymond Robins, coal miner, Klondiker, preacher, social settlement worker, leader of the "Men and Religion Forward Movement" of a few years back, and one of the most enthusiastic of the founders of the late Bull Moose party, is known to the whole labor movement of this country. Hundreds of thousands of union men have been swayed by his eloquence. He is the forceful, magnetic, warm-hearted, hard-hitting, out-door "sky pilot," with the gift of photographing on his mind not only your words and your plans, but your spirit and your power to fight for your program. Before the inquisitors from the Senate he was at one moment that anti-Socialist Robins, the next moment the fiery idealist Trotsky, and a moment later the cool, world-weighing Lenine, the man for whose ability and power Robins had come to have complete respect.

When old Senator Nelson of Minnesota, whose memory proved to be badly impaired, tried to insinuate that Col. Robins was a Bolshevik partisan, the latter flatly denied the charge, but in his turn warned the committee that "You cannot overcome the workers' demands for justice and a better life with bayonets; you can only meet those demands with co-operation in securing for all the people a better life."

Robins' answer to Lenine and to Russia's revolutionary government was a promise that revolution would be unnecessary in America. Lenine told Robins, in January, 1918, before the Brest-Litovsk treaty was made, that even though the Soviet government might finally be crushed out by the bayonets of the capitalist powers, yet Soviet Russia would live long enough to destroy the autocratic governments of Bulgaria, of Austro-Hungary, and of Germany, in turn, and thereby to stop the war. Robins testified that the prophecy came true—that Soviets did lead to the collapse of Bulgaria; that Bolshevik propaganda did force the collapse of Austro-Hungary, and that the smoldering revolution in Germany was fanned to flame by these events, and the war ended. He agreed with Lenine that there was a poor chance that any European power would satisfy the unrest of its workers, and would so avoid the upheaval which Lenine declared would sweep the world.

"America is not like them," said Robins to Lenine. "There are bad spots in our American industrial life, true. There is poverty and industrial autocracy and special privilege, true. But America in the mass is wholesome, and sincerely devoted to the ideals of democracy, and we shall cure these economic wrongs by the political weapons we now have. America is sound at heart, and we shall meet the demands of our workers with measures which will give them the better opportunity in life that the workers everywhere are claiming."

This assertion made by Robins more than a year ago in Moscow became a plea for action when Robins repeated it yesterday in Washington.

"Russia to-day, Senators," he said, "founding its government and its philosophy upon this material basis of Marxian socialism, challenges the Christian world. America is the one nation that is fit to meet that challenge. No government which cannot meet it by establishing the freedom and the welfare of the working masses can survive. Over in England is the ablest statesman of Europe — Premier Lloyd George. Yet he dare not, with all his power, lay the hand of the government upon the Soviets in Belfast and Glasgow, nor suppress the mutiny at Dover. He knows how desperate is the condition of British industrial life—how easily the whole system may be swept away.

"Premier Clemenceau, the heroic leader of France, may survive the assassin's bullet, but his cause is dead. France, like England, sees her laboring masses turning to socialism as the instrument of securing for themselves the chance for a better life which they insist must be theirs.

"America, I tell you Senators, is still strong enough to grant justice to all her people, to remedy these economic wrongs, to continue to be the freest and happiest home of men on the globe. But we cannot meet this Russian challenge with bayonets, nor with repression, nor with laws against the display of red flags. We can only meet it by establishing justice for those who do the work of the world."

Here are some points made by Robins with regards to Russia. Each one nails a lie circulated by the anti-Soviet propaganda bureaus in this country:

1. The "nationalization of women decree" came from a small group of anarchists which temporarily got control of the Soviet in one town. It was a fake. German imperial gold or Russian autocracy's gold was usually found wherever the anarchists made a play to undermine the Soviet government.

2. "Red terror" stories generally were circulated by the same element and always proved false in whole or in part when investigated.

3. The "armed German prisoners in Siberia" myth, upon which the President was first asked to send troops to Siberia, was absolutely false, on the report of a British Army major and an American Red Cross officer who were sent across Siberia by special train to investigate, just before the Szecho-Slovaks started eastward.

4. Paralysis of the big industries in Russia began on the first day of the war, when German managers and technical men whom the Russian ruling class had put in charge of all the industries stepped out. This paralysis continued through the period of the Czar's and Kerensky's attempts to win the war. It was complete before Lenine arrived.

5. Robins, Ambassador Francis, the British High Commissioner in Russia, the Associated Press correspondent and British journalists in Russia, all cabled their appeals to America and England, asking financial aid for Soviet Russia, so that she might refuse to ratify the Brest-Litovsk peace, and would retreat if necessary as far as the Ural mountains. But no answer ever came.

6. The Russian people—97 per cent. of them—are solidly organized behind their Soviet government. The old ruling class, the 3 per cent., have plotted and spied against the Soviets, but they can never come back, because the people will not give up the land nor the industries to them. The revolution had the land and the industries as its stakes, and the peasants and workmen have won the game and will keep the stakes.

7. The Russians will never accept an individualist, or private capitalist, state of society because the Russian mind is a collectivist mind. For hundreds of years they have thought in terms of the village and the community; they will not change to a system of great private fortunes, now that the secret police and the Czar and his Cossack whips are gone.

8. American interest lies is immediate and close economic friendship with Russia. The two republics should work together, letting each work out its own scheme of government. Military intervention has been a tragic mistake against which Col. Robins has steadily used his influence, even though in vain.

Now, while Robins was telling the story of his close acquaintance with this birth and growth of the first workingmen's government in the history of the world, his statement concerning England was being given a curious endorsement by Lloyd George, who was speaking to the joint committee created by the British parliament of employers and trade unions.

"Civilization," the Premier said, "unless we try to save it, may be precipitated and shattered to atoms. It can be saved only by the triumph of justice and fair play to all classes alike." And he added that the employers must never again tell the workers: "You are earning too much; your wages must come down."

Senators Johnson of California and Norris of Nebraska, who listened to Robins' testimony, are going to present the facts to the public during the next session of Congress. They will not so much call attention to the blunders that have been made in dealing with the Russian situation as to the need for meeting the challenge of young Russia with a big program of industrial democracy in the United States.

Will they have the eager help of the big employers?

LABOR COMES FORWARD.

The leading thinkers of the country are vitally concerned about labor. The conference of Governors and Mayors called by the United States Department of Labor and held in Washington recently was devoted primarily to national labor conditions.

The address of President Wilson welcoming the delegates, the analysis of the labor situation by Secretary of Labor Wilson, the reports of the Governors and Mayors—all urged the highest consideration of labor in the plans of national readjustment.

If this consideration were merely casual it would mean little to the worker. If it were not supported by a degree of earnestness hitherto unknown, labor could not expect much benefit. And it will make slight difference to labor whether or not carefully made plans to help the workers are carried out. The great feature—the striking point, of the position of the conference on the labor question—is the composite attitude of mind.

Labor has assumed a new position in the life of the nation.

That position departs from its old place of dependency upon the whim of the employer to take up a posture based upon justice.

The human element in labor rises to the top. Breaking down its commercial aspect as a commodity, labor is linked with the worker, the needs of his family, the right to enjoy comforts, to take part in the affairs of living, share in the enjoyment of social progress. Men are turning their thoughts to devise means to remove the hardships of the jobless workers. Idleness is no longer regarded as a matter of choice. Rather is it believed to be a social wrong. The old law of supply and demand as the basis of fixing the standard of living for the worker is not accepted as the proper measure of determining wages, or, in other words, regulating the education, the amusement, the course of life of the worker, his wife and children.

Labor must have steady employment at wages that will at least enable the worker to be free from constant cares of want, of suffering for his family, in a land of plenty and in a nation of sympathetic people.

That program of life for the worker was the keynote of the conference. It is most concisely set forth in these suggestions submitted by Roger W. Babson, director general of the Information and Education Service, of the Department of Labor:

"Begin at once construction of all public works possible, including public buildings—especially school houses.

"Get behind the 'build-a-home' movement by asking for a quota for your community and then publishing each week in your daily papers how you are keeping up with that quota.

"Get your State to this summer build its full quota of Federal roads on the 50-50 basis and appropriate a larger sum than ever before for State roads.

"See that the traction properties of your State and city receive fair treatment, remembering that the transportation system of a city determines more than any other one thing its growth and prosperity.

"Urge labor to give greater service for its wages, but remember that high wages increase the home market for goods so that the more money paid in wages, the more goods will be purchased, and the greater will be the prosperity of your State and city.

"Get your Councils of Defense and Safety Committees to advertise as much now to get people to buy as they advertised during the war to get people to economize.

"Help Secretaries Wilson, Lane, and Redfield and the other Cabinet chiefs, in their efforts to provide greater opportunities for both Capital and Labor."

This is constructive work. It comprises needed improvements. Completed, it will add to the country's wealth and the well-being of the people. It points the way to lasting prosperity. And labor itself can do much toward making the suggestions effective by keeping them constantly before the public officials, by calling upon these officials to act upon them in times like these, by showing everyone that constructive work is necessary to orderly government.

Industrial peace is worth any price.

WOMEN AT PEACE CONFERENCE.

In response to a letter from President Wilson stating that he thinks it "very desirable that the women workers should have at least one or two representatives in Paris to speak before the commissions that are considering labor matters," the National Women's Trade Union League is sending two representatives to Paris at once. These representatives are Miss Mary Anderson, vice-chairman of the Washington Committee of the National Women's Trade Union League, who is assistant director of the Woman-in-Industry Service of the U. S. Department of Labor, and Miss Rose Schneidermann, president of the Women's Trade Union League of New York. They will sail from New York next Monday, March 10.

Both Miss Anderson and Miss Schneidermann are trade union women, the former a member of the executive board of the International Boot and Shoe Workers' Union, and the latter of the Cloth Cap and Hat Makers.

The plan to send women representatives to present the interests of women workers to the Peace Conference was discussed and agreed upon some weeks ago at a meeting of the executive board of the National Women's Trade Union League. With the announcement about that time of the President's prospective return to America, however, the League officers determined to wait and obtain the President's advice as to the opportunity to be heard in Paris and the desirability of their attendance. This advice the President has given in the letter above quoted.

One of the principal points the representatives of the National Women's Trade Union League will urge in Paris will be the representation of women in the proposed international labor commission and any international labor bureau that may be established. "On behalf of the wage-earning women of the country," says the League's letter to the President on this subject, we ask that adequate attention be given to the necessity for safe-guarding the interests of women workers by giving their representatives a share in the development of plans for international labor legislation."

The delegates will also offer to the conference the results of American experience in co-ordinating efforts in behalf of women workers through the Woman-in-Industry Service.

Any league of nations, or any other plan to bind together the now distracted world, that counts out God, will be but the voice of human vanity. To the truth of this statement let the unimpeachable testimony of the world's present sorrow bear witness. The whole plea must be for the winning of the war at whatever cost of years or treasure or life, to the end that the sum total of human interest may be advanced, war be beaten out of the world's life and a new civilization established in harmony with the pattern shown us in the mount. He who dares not stand for such a day, either in his lack of vision or in his moral cowardice, mocks the blood that is being shed on the fields of Europe for the redemption of the world.—Charles S. Medbury.

Those parents who are forced to depend for support upon their children do not necessarily love them the more on that account.

Labor's Economic Platform

Following is the Economic Platform adopted by the American Federation of Labor:

1. The abolition of all forms of involuntary servitude, except as a punishment for crime
2. Free schools, free text books and compulsory education.
3. Unrelenting protest against the issuance and abuse of injunction process in labor disputes.
4. A work day of not more than eight hours in the twenty-four hour day.
5. A strict recognition of not over eight hours per day on all Federal, State or municipal work, and not less than the prevailing per diem wage rate of the class of employment in the vicinity where the work is performed.
6. Release from employment one day in seven.
7. The abolition of the contract system on public work.
8. The municipal ownership of public utilities.
9. The abolition of the sweat-shop system.
10. Sanitary inspection of factory, workshop, mine and home.
11. Liability of employers for injury to body or loss of life.
12. The nationalization of telegraph and telephone.
13. The passage of anti-child labor laws in States where they do not exist and rigid defense of them where they have been enacted into law.
14. Woman suffrage co-equal with man-suffrage.
15. Suitable and plentiful playgrounds for children in all cities.
16. The Initiative and Referendum and the Imperative Mandate and Right of Recall.
17. Continued agitation for the public bath system in all cities.
18. Qualification in permits to build of all cities and towns, that there shall be bathrooms and bathroom attachments in all houses or compartments used for habitation.
19. We favor a system of finance whereby money shall be issued exclusively by the Government, with such regulations and restrictions as will protect it from manipulation by the banking interests for their own private gain.

WEEKLY NEWS LETTER.

(Continued from Page 3.)

for further comment. The humanitarian spirit that is prevailing in our nation, and the demand for social justice which has taken hold of the hearts of men and women declare that the brutal doctrine which held that human labor was a commodity to be bought and sold at the lowest possible market price as machinery, oil, coal, wheat, flour, and used until its supply is consumed or its efficiency exhausted, is vicious in morals and unsound in economics.

"We need not suffer ourselves to be misled further by any such delusion. No nation will be truly great, indeed no nation will survive, that thus oppresses its producers."

North Dakota Enters Field of Industry.

With the signing of several bills by Governor Frazier, North Dakota enters upon a program of State industry that is without parallel in the history of this country.

By these bills the State will establish and operate the Bank of North Dakota; build and operate terminal grain elevators and flour mills; establish and operate a State builders' association for the purpose of enabling inhabitants of the State to build and own their own homes; and set up an industrial commission to manage these and other industries the State may decide to embark upon under the unlimited power granted by new amendments to the State Constitution.

The amendments to the Constitution, approved at the last election, remove the limit on State indebtedness and authorize the State or any city or county to engage in any industry or business except the manufacture of intoxicants. Other amendments provide easier methods for amending the State Constitution and limit the State Supreme Court in declaring laws unconstitutional.

The present Legislature passed a women's 44-hour week and minimum wage law and various laws providing for new methods of taxation and of regulation of freight rates and franchises. A workmen's compensation law, with a State insurance fund, has also been passed. Excepting Missouri, this State was the only one north of the Mason and Dixon line that had no compensation law.

All this legislation is the result of the Non-Partisan League, organized by farmers a few years ago. The league is in complete control of the State.

State Constabulary Is "Prussian" Idea.

"A bill which ought to be squelched in a hurry," is the advice given to Wisconsin State lawmakers by Editor Evjue of the Capitol Times, in discussing the proposed State Constabulary law.

"Some of our reactionary legislators," says the editor, "would do well if they would take some cognizance of the fundamental principles of psychology these days.

"A war has just been concluded which had for its aim the death blow of militarism and all its offshoots and accompaniments. And yet here we have a serious proposal by a member of the assembly to set up a sort of Cossack proposition in Wisconsin. Instead of putting away the instruments of war we hear of a plan to resort to force by having a gang of State-subsidized Uhlans to brow-beat the peaceable citizens of Wisconsin.

"The head of this organization, we are told, 'will be appointed by the Governor with a salary of $3500.' There is in addition an array of salaries for lieutenants and captains and sergeants and we suppose that money will also be available for gold braid and pretty spangles. A fine political machine and a convenient instrument for an administration controlled by big business to 'preserve law and order.'

"Wisconsin is a peace loving State. Her people stand for law and order. The legal machinery that we already have is ample for all requirements. We need no Prussian auxiliary to our police and State authorities.

"Are we to begin setting up here in Wisconsin the very principle that has been crushed in Germany?"

Battle Deaths Lead.

In past wars disease killed more men than on the battlefield, but the opposite is true in the present war, according to General March, Chief of Staff of the American Army.

The battle death rate for the entire American army in this war was 20 per thousand per year. In the overseas forces it was 57 per thousand per year.

It is shown that in the Mexican war the battle death rate was 15 per thousand, and the disease death rate 110 per thousand; Civil war, battle, 33; disease, 65; Spanish war, battle, 5; disease, 26.

The development of medical science and surgery is responsible for decreased deaths by disease.

Want Peonage Ended First.

Trade unionists in Porto Rico are not interested in the agitation for Porto Rico independence or Statehood that is being urged by men who ignore deplorable economic conditions of the workers.

The organized workers demand that peonage be ended by men who talk of their Americanism and their love for freedom.

Recently the Porto Rico commissioner, at Washington, made a speech in the American House of Representatives in which he urged Statehood or complete independence and both branches of the Porto Rico legislature have forwarded congratulations to the commissioner "for the splendid and just exposition of our political situation before the American people."

Santiago Iglesias, a member of the island Senate, and a trade unionist, opposed congratulating the commissioner.

"He made no mention," said Iglesias, "of the fact that 85 per cent. of the Porto Ricans are slaves of a few corporations who exploit both our people and our resources for the benefit of stockholders who live in other countries."

Won't Return Roads Yet.

The railroads will not be returned to pirvate management by the President until Congress is given an opportunity to consider a permanent program of legislation.

This announcement was made by the Director General of Railroads in a letter to Congressman Sims.

"For your further information," the railroad executive said, "I am glad to say that I have now discussed the matter with the President, and he has authorized me to state that not only will there be no sur- to state that not only will there be no sudden relinquishment of the railroads, but further that it is not his purpose to relinquish the railroads until there has been an opportunity to see whether a constructive permanent program of legislation is likely to be considered promptly and adopted within a reasonable time."

Want Chink Seamen.

The "sturdy Americanism" of the National Industrial Conference Board, representing a score of manufacturers' associations, is shown by its indirect plea for Orientals to man this country's merchant marine. In discussing the necessity for revising America's navigation acts to meet after-war conditions, the board says:

"At present several of these acts are distinctly hostile to the development and successful operation of a merchant marine. The La Follette Seamen's Act, for example, requiring the employment of a certain proportion of native American as able seamen on ships and the ability of all employes to understand English has generally been held responsible for the practical disappearance of American shipping from the Pacific Ocean."

War Checks Liberty.

In upholding the conviction of two persons charged with attempting to interfere with army enlistments by mailing circulars discussing subjects relative to the war, the United States Supreme Court holds that the so-called enlistment section of the Espionage Act is constitutional.

"When a nation is at war," the court said, "many things that might be said in time of peace are such a hindrance to its effort that their utterance will not be endured as long as men fight, and no court could regard them as protected by any constitutional right."

OUR EMBARKATION SERVICE.

(Continued from Page 7.)

shipped to France had steadily increased from May, 1917, when the figures for the month were only 1,543.

It required 936 sailings to transport a sufficient number of troops to France to win the war. These sailings were carried out by 307 vessels, 108 of them being naval, 182 commercial, and 17 Allied transports.

At the port of embarkation in Hoboken it is declared that the work of fitting these vessels out as transports was done entirely by the Army instead of by the Navy, as has been generally believed.

The Embarkation Service points with pride to the work done by the Army in building up a transport fleet.

Major-General Shanks has served as commanding officer of the port of embarkation practically through the war. The officers who have served with him and with Brigadier-General McManus are men who have grown up with the Embarkation Service, the personnel having changed very little since the declaration of war.

Brigadier-General McManus and Col. John Robertson are heads of the Troop Movement Office of the port of embarkation, under them being sixteen line officers, several of whom are West Point graduates.

The same efficiency that marked the shipments of the A. E. F. overseas is characterizing its return. Three hundred thousand doughboys have already been landed from "over there."

The smoothness and rapidity with which the debarkation officers work were demonstrated a few days ago when the naval transport Leviathan docked in Hoboken with 9,300 troops and equipment.

In less than three hours after this giant liner tied up there wasn't a doughboy or a scrap of equipment in sight. The entire outfit had been entrained and was on its way to camp.

WHAT IS BOLSHEVISM?

(By W. B. Rubin.)

What is Bolshevism? What spirit is back of it?

Is it a thunder-bolt out of a clear sky? It may seem so to those who have never looked up, but to the one who sits in the tower and watches the sky it is not, for he knows that before there can be a thunder-bolt, there must be a clash of clouds. So Bolshevism is a social and industrial thunder-bolt, caused by the clashing of political and economic clouds.

The world has fought, millions have died for the democracy of the world—not merely political democracy, but social, economic democracy. Kaiserism in Europe caused its political upheaval, and upon the heels of that political upheaval has followed the present economic upheaval.

We and Europe have put down Kaiserism in Europe, but what about the Kaiserism of the industries, and the Kaiserism of our courts here? What about the millions of soldiers who gave up their time, their health, their lives for this democracy? What have they and we gained thereby while the profiteers stayed at home and gathered in the hoards of wealth that always come with the supplying of war necessities?

Victor Hugo describes how the human vultures after the battle of Waterloo robbed the soldiers dead and strewn upon the battlefield. Those who were there caught were lined up and shot. But what about the human vultures who have robbed and still rob the soldiers living?

In former times, when the war was over the king returned from the battle front. Now it is the people who have returned from the front.

It is no longer a king's war—the kings have been left behind—but a people's war, and the people who have returned and are returning are demanding the fruits of this, their war.

The world over, the wireless has made information instantaneous. A mere touch and the electric current of the toilers' human soul is connected, the ignition of the revolutionary spark is spontaneous. Behold the simultaneous outbreaks everywhere!

The recent incident in Seattle is fraught with danger! If the people, the men who give the city light and water, its very life, *en masse* can rise up in spite of leaders and influences to the contrary, and tie up a city, even if only for a short space of time, it denotes a spirit that well may be reckoned with. What will prevent a repetition of a like incident elsewhere, or at another time in Seattle?

In Seattle, it lasted but a day; in another city, it might last a week; in a third city, a month; and if not checked it might seize the entire nation, although all wrong in theory and practice.

The police cannot stop it.

Soldiers cannot suppress it. Deportation cannot prevent it. Courts cannot enjoin it.

There is but one remedy and that is in full and complete justice to all the people upon this earth—political justice, industrial justice, economic justice and social justice. There must be no profiteering out of this war. All profits, past, present and future, growing out of this war must be turned back to the people, no matter how or whence they came.

Not until the people are satisfied that the program of their democracy is for complete, substantial, equitable, industrial and economic justice, not merely the enthusiastic welcoming of the returning soldiers, feasting them for a day, and parading them for an occasion, but in the sharing of their rightful gains, in the sharing of the nation's obligations and duties, will Bolshevism abate.

Whatever you call it, whether Bolshevism, I. W. W.ism, or Spartacus-ism, it is the spirit of discontent.

Discontent is the cry of the soul, and just as the hungry stomach rebels unless it be given food, the smell of it but excites greater hunger, so the hungry soul rebels unless it be given that justice which satisfies the soul, for the smell of it but excites greater protest and unrest.

Even the telephone girls have other interests besides answering calls; and one afternoon two of them, in different exchanges, had a chat over the wires. 'Twas on that all-important subject—dress. Both were going to a birthday party on the following Saturday afternoon, and the discussion on what they should wear on that occasion waxed interesting. Ten minutes passed and the topic was still far from exhausted. But an insistent masculine voice at last compelled one of them to turn her thoughts to other things. "Are you there?" the voice yelled. "Are you there? Halloa! Ah, at last! Who is that speaking? Who are——" "What line do you think you are on?" demanded the annoyed "halloa" girl, indignantly. "I don't know," came the weak and weary reply; "but, judging from all I've just heard, I think I must have got on the clothes-line."

It is reassuring to note that Chairman Edward N. Hurley of the Shipping Board has promptly characterized as misleading a cabled statement from Europe that German naval officers are planning to get into the American Merchant Marine in pursuance of a plot to "colonize" this country's avenues of export trade, ashore and afloat, with Germans. Under present conditions it is not possible for an enemy alien to get an officers' license in the Merchant Marine, and under the Shipping Board system of providing new officers for the Merchant Marine service none but Americans will be added to the present supply of Merchant Marine officers.

A sheriff was discussing campaigning. "In the old days," he remarked, "I used to do it on horseback, but now it's the auto. Probably next time folks will say: 'Seen the candidate yet?' 'Yes; he flew over my house this morning and dropped some literature.'"

The man who is inclined at times to regard himself as the "whole cheese" in the labor movement may find something worth while in the reflection that after all he is merely a mite—a creature born of the movement's age and strength.

As a man may be loved for the enemies he has made, so the "labor leader" who is not the subject of denunciation, libel, and misconstruction from certain sources is justly open to suspicion regarding his disinterestedness.

Labor News

Japanese in Utah, one thousand strong, have established a co-operative labor fraternity. They have a semi-weekly newspaper and are operating stores. The Co-operative Bulletin reports in this connection that the Negro also is awakening to an interest in the co-operative movement.

Three hundred employees of the Liggett & Myers branch tobacco factory at Philadelphia joined the Tobacco Workers' union and struck to enforce an eight-hour day. The strike is still on. The net earnings of this concern, last year, were over $10,000,000, an increase of $1,000,000 over the previous year.

For the first time since 1915 the New York State Insurance fund, administered by the State Industrial Commission, has declared a dividend of 10 per cent. The increase in the number and frequency of industrial accidents resulting from war conditions made it advisable to suspend dividend payments for the period of the war.

Packing house employees were given a 10 per cent. advance by the decision of the arbitrator, Judge Alschuler of Chicago. The advance is retroactive to November 10, and is based on the advance in the cost of living. The award also deals with a number of minor complaints. Counsel for the packers estimated that the award would cost the packers $13,000,000 a year. About 85,000 employees will receive the retroactive advance.

Edwin Mulready, Massachusetts State Commissioner of Labor and Industries, says employers are forcing children into work that is forbidden by law. He says there are 250,000 children employed in Massachusetts industries and that many of them are working on machines that are a menace to their safety. He explained that the children are employed in the first place under the "certificate law," but after they work in the factories they are transferred to work other than that called for in their certificates.

Secretary Lane of the Department of the Interior has just announced that the casualty list of the American coal mining army for 1918 is 2,575 men killed. This penalty paid by one single industry was said by the Secretary to emphasize the fact not ordinarily appreciated that the worker in the mining industry who did his full duty during the war braved peril just as did the soldier at the front and quite as willingly went to the supreme sacrifice. There has been a decrease of 232 deaths from explosions of gas and coal dust.

Within 10 years, and probably within five, the five leading meat packers will control the entire food supply of the country and charge whatever price they desire, was the prediction of Francis J. Heney testifying before the House Interstate Commerce Committee. Mr. Heney said the packers had extended their activities into so many fields that they have become a menace to the country. They now control the cheese, oleomargarine and butter markets, he said, and are rapidly obtaining a monopoly of a large number of other food products. Through their huge capital and their special privileges, the witness declared, they are able to "smother competition."

You Want the Truth

This year there will be stirring times in the Nation. Under government censorship it is increasingly difficult for the average man to get the real meaning of the social and political movements of the day.

LA FOLLETTE'S MAGAZINE

will be specially represented at Washington and will analyze and present the news from the capital truthfully and fairly. Senator La Follette is making a real fight to lift some of the tax burdens from the common people and place them where they belong — on excess profits, war profits and surplus fortunes and incomes. Because of this he is being attacked more bitterly than any other man in public life.

Send in your order today.

$1.00 Per Year—Agents Wanted

Intestinal Parasites, The Nematodes
OR ROUND WORMS

Of the many species of parasitic worms it is fortunate that only a comparatively few varieties are found in human beings. Of these the Round Worms, and the Tape Worms are by far the commonest species. The round worms may be subdivided broadly into two families, the round worm or stomach worms, and the thread, or seat worms.

The first-named species resembles very closely in appearance the common earth worm, being pinkish-white or red-brown in color, and varies in length from 5 to 10 inches, according to sex. Ordinarily, they inhabit the smaller intestine, but frequently wander up into the stomach, where the disturbance due to their movements causes them to be vomited; hence they derive the familiar name Stomach Worms.

While most frequently found in children, they are often the unsuspected cause of obscure digestive disturbances in adults, and the possibility of their presence should always be taken into account when treating stomach disorders.

The eggs of the round worm gain access to the human system through contaminated food or water and are hatched out and the young worms pass into the intestine where they develop to their full size in about five weeks.

The symptoms produced by Round Worms, while characteristic, are also sometimes similar to those caused by other digestive disturbances and for that reason are not always recognized as arising from intestinal worms.

It is believed by scientists that the mere presence of the worms is not the cause of the many disturbing symptoms that are observed, but that they are due to some poisonous secretion emitted by the worms which, being absorbed into the system, cause a variety of more or less alarming results.

In the case of children these may manifest themselves in severe nervous disturbances, such as epileptiform convulsions, grinding the teeth and restless sleep, disturbances of vision, abdominal pains, capricious appetite, itching of the eyes, nose and fingers, and so forth. It is, therefore, well for the parent of a child suffering from any of the foregoing symptoms to determine, before jumping at the conclusion that the child has epilepsy or defective eyes, or is just bad tempered and irritable, whether or not it is suffering from some form of intestinal parasites.

If any of the above symptoms are noted, or if the child seems poorly and listless, without any apparent reason, or if it loses flesh in spite of a plentiful diet, notwithstanding that it seems otherwise quite normal, then, make every effort to find out if the child is not suffering from worms. This can usually be determined by one of three ways: The most positive is the discovery of the passage of a worm or worms, either alive or dead. Another indication is the presence of masses of mucus in the stools, which will usually be found upon minute examination under a magnifying glass to contain the tiny eggs of the worm. Another way, the third, while not so conclusive, is nevertheless valuable: This consists in administering Laxcarin. If worms exist the increased amount of mucus passed at first will be noted and the improved condition of the child will be the best indication of the efficacy of the treatment.

In correcting hyper-acidity, in assisting in the assimilation of the nutritive elements of the food eaten, and in the general toning up of the digestive organs and processes, laxcarin will be found most valuable.

Laxcarin is sold by the Laxcarin Products Co. Price per box, one dollar. Full treatment, six boxes, five dollars. Will be sent postpaid upon receipt of cash, money orders or stamps. Substitutes must be refused. Department E-99, Pittsburgh, Pa.

Home News

The Farmers' National Reconstruction Conference, which recently met in Washington, and which represents the big organized farmer groups of the country, has selected a committee to go to Paris in an effort to lay the farmers' point of view before the Peace Conference, and also to participate in such international congress of workers as may take place.

Designation for entry of nearly 3,000,000 acres of public lands in the West has been announced by the Secretary of the Interior. Mineral lands lying within the lignite area of North Dakota comprise 773,000 acres of the total. They can be bought for $10 to $20 an acre. More than 1,000,000 acres of dry-farming lands in 320-acre tracts are opened under the homestead act and nearly 1,000,000 acres are opened in tracts of 640 acres under the stock raising homestead law.

The United States Treasury is very desirous that the sale of War Savings Stamps shall be continued throughout the period of reconstruction with as much zest as during war time. A great many have complained of tediousness in saving the 25-cent stamps or even buying stamps in as small amount as $5. For this reason the Treasury Department is issuing $100 stamps with the same regulation preventing any one person from owning more than $1000 worth of this Government security. The 4¼ per cent. interest compounds quarterly on all issues.

Addressing the Senate Military Committee, Brigadier-General Ansell, acting Judge Advocate General, condemned the existing system of courts-martial in the Army. He declared that the penalty of death or heavy terms in prison, running up to forty years, had been inflicted for what he characterized as comparatively trivial offenses. Senator Chamberlain subsequently announced that the Military Committee would obtain from the War Department the names of those Army officers who in court-martial proceedings had imposed extreme penalties upon soldiers.

A dispatch from Des Moines, Iowa, stated that at the first meeting of the House Committee on Ways and Means of the Iowa Legislature, the New Zealand plan of fixing taxable values was discussed at length. The Legislature needs an increased income, and has turned its direction to the land values, and is about to propose a law borrowed from across the seas that will compel all persons to fix their own property valuations, knowing that if they placed them too low they might be forced to sell to any bidder who would offer from ten to fifteen per cent. more than the valuation set.

The Washington State Insurance Commissioner says that every dollar of fire insurance in that State costs the purchaser approximately $3. He shows that in 1917 the old-line insurance companies collected in Washington the sum of $5,840,000, and repaid for losses but $2,619,000. Last summer the companies attempted to enforce a 10 per cent increase. This was resisted by the Commissioner, who now asks for power to regulate rates. No legislator has yet advocated State insurance, as everyone acquainted with conditions realizes the fight the Insurance Commissioner will start when he tries to even secure the power to regulate.

Domestic and Naval

The American Steamship "Lake Weston," 1,949 tons gross, 1,157 net, built at Wyandotte in 1918 and owned by the U. S. Shipping Board, has been sold for about £3,200, as she lies a wreck off Nash Point.

W. H. A. Walker, tank steamer executive for the U. S. Shipping Board, has taken over the work of the Board's Chartering Committee, the members of which recently resigned. Mr. Walker has the official designation of chartering Executive.

The British steamship "Holms Island," ex "Grelford," ex "Nancy Lee," ex "Minterne," 2,823 tons gross, 1,802 net, carries about 4,800 tons d.w., and owned by the Williams Steam Navigation Co., Ltd., Cardiff, has been sold to the Marshall Shipping Co., Ltd., Cardiff, for £65,000. This price compares with £75,000 paid for this boat in October, 1916, and £44,000 in November, 1915.

Reports have appeared in the daily press about all the defense mines laid by the U. S. Navy along the Atlantic Coast having been picked up. It is quite certain, however, that not all the mines laid by the German submarines during their raids along the coast have been accounted for, and the mine peril in coastwise navigation though nominal is nevertheless an existing one.

Andrew Alexander Allan, long connected with the Allan Line of Steamships, of whose founder he was a descendant, died at Montreal following an operation. He was born in 1860 and was a partner in the firm of H. & A. Allan, managers of the Allan Line on this side until it was absorbed by the Canadian Pacific Railway. He was well-known in shipping circles on both sides of the Atlantic and had taken a leading part in advocating improvements of St. Lawrence navigation.

It is said that the forthcoming report of the Submarine Boat Corporation, which operates the fabricated ship plant at Newark Bay, will not be impressive from an earning standpoint. In fact net after taxes will probably not be much over $500,000, or less than 70 cents a share on the 764,810 shares of stock outstanding. This compares with $1.63 earned on the same amount of stock in 1917. From the same source it is confirmed that although the company has put 23 ships in the water at Newark, it has only one in operation (the Agawam). The most exasperating handicap, it is said, has been on the ground of delay in securing the geared turbine engines from the makers.

The United States Shipping Board states that two of six wooden ships allotted to the Recruiting Service have arrived at Boston, and will immediately be fitted out as training ships for the Merchant Marine. The two vessels are the "Alabat," a Ferris-type ship, built at Jacksonville, Fla., and put into commission last November, and the "Sturgeon Bay," a lake type vessel, completed about a year ago at Sturgeon Bay, Wisconsin. The "Alabat" is 281½ feet long, 46 feet in beam, and has a 23-foot depth of hold. She was designed to carry 3,500 deadweight tons. The "Sturgeon Bay" is 245 feet long, 42 feet in beam and has a 22-foot depth of hold, and is 2,800 deadweight tons. She has been in service between the Lakes and Montreal.

News from Abroad

For the second time an epidemic of Spanish influenza is occupying medical minds in England. Reports on the 23d indicated that the death rate during the last two weeks has been one in every five cases. In London alone there are 1300 policemen sick in hospitals.

It is said that Lenine and Trotzky differ in regard to the acceptance of the proposal for a conference at Princes Islands. Lenine, it is said, wishes to accept the invitation on account of the economic condition of Russia, which he declares is hopeless, while Trotzky, at Petrograd, is declared to be of the opinion that the occupation of the Ukraine would insure food and fuel supplies to the Soviet Government.

During the last year, announces Commerce Reports, there were thirty corporations, financed by Japanese capital, organized in agricultural enterprises in a single district in the Philippines. The number and capitalization of these corporations are about the same as those of the agricultural corporations financed by Filipinos in the whole archipelago during the year. Japanese capital has also become active in the sugar industry in the islands.

Sir R. M. Kindersley, presiding at a meeting of the Hudson's Bay Company, stated that "there was now practically no good land in the Hudson Bay region open for free homesteads." As Governor he congratulated the company that this circumstance clearly tended to increase the demand for the company's lands. The long held lands of this ancient company are now to make good returns in the way of unearned increment to the London stockholders.

Prominent business men in several of the largest cities of Australia have organized a company with sufficient capital to route out an aerial course from Sydney to London, with the idea of developing a practical route for mail and passenger service between Australia and England. After the completion of a survey, it is proposed to finance a company in London to operate the service to Australia with the idea of making a complete journey in 150 hours between London and Sydney.

Since the visit of President Wilson to Italy a widespread campaign to propagate his views has been undertaken by the Italian League of Free Nations Society (Famiglia Italiana della Lega Universale per la Societa tra le Libere Nazione). A series of meetings and public lectures has been arranged in all the principal cities of Italy and the provinces to educate the people in "the great idealistic ideas of Wilson" and to "promote a vigorous movement in support of a peace founded on right and justice."

King Victor Emmanuel has signed a decree of amnesty to soldiers and members of their families sentenced for political and economic offenses, treason and speculation alone being excluded. The preamble of the decree, after referring to the brilliant Allied victory, says: "We also celebrate in our hearts, with sincere faith, the pact of the Society of Nations, which must be the intangible charter of humanity. The whole Italian people must receive and understand with joy the high value of this pact and its immortal meaning."

With the Wits

"Would you advise a young man to go into any business where he saw an opening?" "Yes, if he was sure the opening wouldn't get him into a hole."—Baltimore American.

"What are you doing to help win the war?" "Well, I've bought war stamps and Liberty Bonds, but I haven't been able to find any whale meat as yet."—Kansas City Journal.

"What have you there?" "Just a summer book." "Ah! Something light and airy?" "Certainly not. This is a serious summer and I'm going to read a serious book."—Birmingham Age-Herald.

"Never make a fuss about what you can't help," said the homely philosopher. "Nonsense," replied the fan; "that idea would take half the excitement out of a baseball game."—Boston Transcript.

Dear Old Lady—So you're on a minesweper, are you? And where do you sweep mines?

Cautious Tar—Oh, just round the tops of 'em, lady; where the dust settles.—Marine News.

"A great many commodities are advancing in price." "And that reminds me." "Yes?" "I heard less kicking when whisky advanced $4 a gallon than when milk went up 1 cent a quart."—Louisville Courier-Journal.

Customer—By Jove, I am glad to see you back. Has the strike been settled?

Waiter—What strike, sir?

Customer—Oh, come now! Where have you been since you took my order?—Tit-Bits.

The sailor had just told the old lady in the train what his share in the great war was. "In a submarine!" she exclaimed. "How nice! And what do you do?" "Well, mum, I runs for'ard and tips her up when we want to dive."—Occidental.

Farmer (after the patriot has milked his first cow)—Well, friend, you've learned something you never knew before, hey?

City Chap—Verily, brother! I've just learned that the person who says a cow gives milk is a liar.—Buffalo Express.

Earnest Inquirer (collecting statistics for a work on temperance)—And how many glasses of beer would you—er—consume in a day?

The Person—Well, I can't say, guv'nor. Some days I 'as about twenty or thirty, an' then again, another day, perhaps I might 'ave quite a lot.—Detroit Free Press.

SAN FRANCISCO

Taylor's Nautical Academy

Established 1888

Consular Building, Corner Washington and Battery Streets, Opposite New Custom House, San Francisco, Cal.

THIS OLD AND NOTEWORTHY SCHOOL is under the direct and personal supervision of CAPTAIN HENRY TAYLOR and equipped with all modern appliances to illustrate and teach any branch of Navigation.

The class of teachers of Navigation in the past have been those having simply a knowledge of Navigation, and Navigation only. Conditions have changed, and the American seamen demand a man as a teacher with higher attainments than one who has only the limited ability of a seaman. The Principal of this School, keeping this always in view, studied several years the Maritime Law, and is now, in addition to being a thorough teacher of Navigation and its kindred subjects, a regularly admitted Member of the Bar.

There is no standard of education required of a pupil entering the School, for no matter how ignorant the seaman may be, even in the rudiments of common education, Captain Henry Taylor will teach and raise him from the depths of ignorance to the height of the average well-informed man, and in a comparatively short interval of time.

THE WORLD'S MERCHANT SHIPPING

Chairman Hurley's Report on His Mission Abroad

Since his return from Europe on February 11th, Chairman Hurley and his colleagues of the U. S. Shipping Board have been intensely occupied with the subject matter of the report, published in part herewith. For it is these data, coupled with conditions existing on this side of the Atlantic, which are being employed as a basis for the working out of a definite policy of ownership and operation for the American Merchant Marine—one of the most complex and involved of post-war problems.

Chairman Hurley recently authorized the statement that the work on a tentative plan for the operation of an American Merchant Marine has progressed so far that its details will be ready for publication on or before March 31st.

Merchant shipping is now the universal interest of mankind. Every nation, great or small, is alert to the vital bearing of ships upon its future prosperity. After three months spent in the midst of the great events connected with the termination of the war and the solidification of peace, I deem it an immediate duty to lay before my colleagues of the United States Shipping Board a report upon the data accumulated by my conferences and investigations.

The war has brought us into a high place as a maritime power. I find the peoples of the world aroused to an intense interest and concern as to the use we are to make of this power, now that peace is returned. My observations in Europe compel optimism. In America, you have heard much about British competition. In Great Britain I heard a great deal more about American competition. The expressions of British publicists, newspapers and officials which came to my attention provided no grounds for alarm about the future of our shipping. The lesson I learned from the British was not to concentrate too much upon the strength of the competition we must meet. For more than a generation, we have heard British seamanship and British ship-operating ability lauded. We have shared this admiration. But, in our praise, we have been prone to ignore the advantages that lay on the side of the ships that flew the British Flag. The truth is that our friends across the water are, for the first time in many years, entering upon a period of actual competition. It is an era regarding which I entertain no misgivings. The obstacles of inexperience will quickly give way before American industrial strength and energy. It is a new age of ocean transportation as well as of world policy. It is an age in which new conditions will rule and old advantages will become inoperative. It is an age of promise for those who would participate in America's high destiny upon the peaceful seas.

The first thing necessary is to know where we stand. It has been possible since the armistice to assemble the necessary information regarding the war's effect upon maritime power. We know now the extent to which the German campaign of piracy reduced the steam sea-going tonnage of the world, despite the energetic construction undertaken by the United States and the other nations.

At the outbreak of the war, in July, 1914, the total steam sea-going merchant tonnage of the world (exclusive of Germany, Austria, and Turkey) was 34,924,000 gross tons. (To compute deadweight tons from gross tons, take 150 per cent. of the gross tonnage; to compute gross tons from deadweight tons, take 66⅔ per cent. of the deadweight tonnage. During the war the Allies and neutrals lost 12,815,000 tons through enemy action. They also lost 2,192,000 tons through marine risk, and about 210,000 through seizures by the enemy, making a total loss of 15,218,000.

To offset these losses there were the following gains: Through new construction, 11,856,000 tons; through capture from the enemy, 2,393,000 tons, making a total acquisition of 14,249,000 tons. It will be seen from the above that the net loss of allied and neutral nations is only 969,000 tons, leaving the tonnage of allied and neutral nations 33,956,000 at the close of the war. In order to arrive at the total loss of tonnage for the world, it is necessary to take into account the losses from the German and Austrian fleets during the war. As the result of careful study, it has been found that the net losses for Germany and Austria are about 2,350,000 tons. If we add to this the net loss of allied and neutral nations (969,000 tons), we get a total loss of 3,319,000 gross tons. This figure, however, is too small to indicate the total loss to world tonnage, due to the fact that many vessels were pressed into service during the war which were considered unfit for service before the war, and many others were kept in service long after they would have been abandoned under normal conditions. If a deduction of one million tons were made for actual and accumulated abandonment and other losses not included in the figures above, we would have a total of 4,319,000 gross tons to deduct from the merchant fleet of the world in order to arrive at a fair estimate of its tonnage today.

Since the steam sea-going merchant tonnage of the world (including Germany, Austria and Turkey) was approximately 41,420,000 tons at the outbreak of the war, the total tonnage of the same sort at the present time is approximately 37,100,000 tons.

This figure, however, does not give us an adequate idea of the shortage in world tonnage at the present time, because for the ten years previous to 1914 the world tonnage of steam vessels had been increasing at the rate of approximately 4.7 per cent. annually (about 2¼ million tons). If it had continued to increase at this same rate from the outbreak of the war until the first of January, 1919, it would have been between ten and twelve million tons greater in 1919 than in 1914.

The United States forged ahead as rapidly as Germany fell behind. In August, 1914, at the beginning of the world war, the United States sea-going merchant marine, 500 gross tons and over, included 624 steamers of 1,758,465 gross tons, and 870 sailing vessels and schooner barges of 947,852 gross tons, making a grand total of 1,494 sea-going merchant vessels of 2,706,317 gross tons. On November 11, 1918, at the end of the war, the steam merchant marine had increased to 1,366 vessels of 4,685,263 gross tons, and the sailing vessels and schooner barges had decreased to 747 vessels of 829,917 gross tons, making a grand total of 2,113 sea-going vessels of 5,515,180 gross tons. This does not include the seized enemy vessels, which at the end of the war aggregated 88 vessels of 562,005 gross tons, of which number 81 of 546,210 gross tons were steamers, and 7 of 15,795 gross tons were sailing vessels.

The total construction in the United States added to the merchant marine during the war 875 vessels of 2,941,845 gross tons. The purchase from aliens of 233 vessels of 833,854 gross tons, the movement to the ocean from the Great Lakes of 66 steamers of 139,469 gross tons, and miscellaneous acquisitions amounting to 31 vessels of 39,219 gross tons are other sources of acquisition. The loss of 114 vessels of 322,214 gross tons by enemy action, of 278 vessels of 405,400 gross tons by marine risk, of 130 vessels of 268,149 gross tons by sale to aliens, and of 64 vessels of 149,761 gross tons through sale to the U. S. Government, abandonment and other causes accounts for the decreases. Losses of 15 seized German and requisitioned Dutch steam vessels, amounting to 112,248 gross tons, are not included in the losses given above.

To-day we are potentially the greatest marine power of the earth, for the reason that we possess the greatest shipbuilding instrumentalities.

The nations of the world are proceeding somewhat slowly to emerge from the restraint imposed by war utilization of shipping. The necessities of the situation compel measured action. In England the policy is to avoid nationalization of shipping and to withdraw control as promptly as possible. The movements in this direction, while considerable, are subject to needful restrictions thus far. It was only the other day that a prominent English newspaper spoke very vigorously of the desirability of restoring the rule of private initiative. The sale of certain uncompleted standard ships has been arranged by the British Government and it may be well to draw your attention to the procedure under which this transaction was conducted. In January, Lord Inchcape in a letter to the Chamber of Shipping announced that, in conjunction with Sir Owen Phillips (of the Union Castle Line), he had agreed with the Shipping Controller to take over the contracts into which the Government had entered with shipbuilders for the construction of standard steamers. About 137 such steamers were building and this number was therefore in-

volved. The agreement does not, however, reach to the ferro-concrete steamers, few in number, which are under construction for the Admiralty. Lord Inchcape went on to state that the vessels secured would at once be offered to British shipping companies on the terms on which they were acquired. In the allocations, regard would be had to the magnitude of losses suffered by the respective applicants during the war.

Lord Inchcape and Sir Owen Phillips are apparently litle more that the intermediaries between the Ministry of Shipping and the shipping companies. Instead of conducting the business by private sale, as has been done in the case of completed steamers, the Ministry has divested itself of its building contracts by a single transaction and has shifted to the shipping companies as a body the task of allocating the unfinished tonnage. Such a procedure is simpler for the Ministry, and, I am informed, more satisfactory to the companies.

What the British ship-owner gains through purchasing at this stage is the opportunity of having the standard boats completed somewhat according to his individual needs. The chief criticism of such boats has been their reported inadaptability to varied services. But it has been pointed out that considerable adaptation would be possible, if prospective purchasers could give directions and have them followed. This now becomes possible.

The terms of purchase and repurchase are not known. The estimate appearing in the newspapers relative to the transaction between the intermediaries and the Ministry is that some £20,000,000 is involved. Undoubtedly the Ministry is writing off a considerable part of its construction costs, and the price made to the companies is naturally a satisfactory one.

Ambitions of Other Nations.

The study of Shipping Board experts revealed a teeming ambition among other powers to achieve a higher maritime standing. In almost every country the desire exists not only to replace war losses but to add new totals to be used in the work of reconstruction and in developing new foreign trade. "The cumulative miseries of four and one-half years have reminded the world that civilization is transportation," said a noted British authority recently, "and, as the sea controls the land, ships are far more important than railways since they constitute the principal, indeed the one means of carriage between those nations dependent upon the outside for their foods and raw materials." Even Switzerland has not escaped this desire to acquire a merchant marine. I am informed that the Swiss intend to construct a merchant navy of their own, which, after the canalization of the Rhine, will bring coal oil, grain and other necessary supplies in exchange for the manufactured goods of Switzerland.

France is planning her first effort in modern times to secure a merchant marine commensurate with her foreign trade. France lost 528 vessels of 907,000 gross tons through enemy action during the war. Her loss constituted about 39 per cent. of her entire merchant fleet at the outbreak of the war.

In connection with the rehabilitation of the French Merchant Marine, Monsieur Bouisson, commissioner for the Merchant Marine, recently expressed himself as being in favor of recovering all of the French tonnage destroyed by submarines from her associates in the war. This, he thinks, would be only a fair payment for the efforts of France's arsenals, shipyards and naval shops on behalf of her associates.

Great Britain has tentatively agreed to build 500,000 tons of shipping for France when conditions permit, and France expects further to strengthen her merchant fleet by purchases of ships from other shipbuilding nations.

The French Navy League, representing the principal French shipping companies and shipbuilding industries, has appealed to President Wilson to use his influence in enabling France to reconstruct her merchant fleet. France has lost, as a result of the war, 40 per cent. of her tonnage and thousands of her best seamen. All her shipyards have been turned over to producing war material, so that she was unable to replace her losses by new construction. The proposals which the League places before President Wilson are three: first, that German and Austrian shipping be given to France to replace her losses ton for ton; second, that French shipowners be immediately enabled to buy 1,000,000 tons of ships built in Great Britain and 1,000,000 tons of ships built in America; third, that French shipowners be enabled immediately to construct in American shipyards 2,000,000 tons of cargo steamers. The French indeed have large plans for their new enterprise.

Italy's Heavy War Losses.

Italy lost more than half her merchant fleet during the war. Her losses through enemy action were 565 vessels with a tonnage of 852,000 or 51 per cent. of her entire fleet in 1914.

Italian officials are said to feel that it is now very necessary to replace the lost vessels. Cold-storage vessels for the transport of frozen meat are in great demand; the national consumption of meat being approximately 90,000 tons yearly, while the home stocks of cattle are greatly reduced and will have to be carefully husbanded and fostered for a long time to come. For such new construction much material is wanting, especially iron, steel, copper and machinery, usually supplied by the Allies, chiefly Great Britain. Many new sailing vessels are also desired, particularly those provided with auxiliary engines using oil or benzine, up to about 600 tons, for the coasting trade.

Much had been done towards encouraging shipbuilding on the existing slips and the laying down of new ones. The number of new slips is reported to be about 100, and it had been estimated that in three years the Italian Mercantile Marine would exceed 4,000,000 tons.

Although the total output of the Italian yards was not notable in 1918, there was behind it a spirit of whole-hearted enterprise which promises well for the future. Thirty-six shipyards are now in operation and 15 others are planned and it is hoped that a total output of 800,000 tons annually can be obtained if difficulties in obtaining materials are obliterated. New sources of supply of steel are being exploited in the island of Elba and the valley of Eosta.

The shipbuilding industry in Japan enjoyed great prosperity during the war period, numerous orders having been received from abroad as well as from Japanese shipowners.

Service Rendered by Japanese.

On June 30, 1914, an analysis of Lloyd's registers and the reports of the Japanese Department of Communications shows 616 steam vessels of 1,625,844 gross tons in the Japanese merchant marine of 500 gross tons and over. A similar study as of November 1, 1918 shows a total of 792 steam vessels with a gross tonnage of 2,010,382, an increase of 176 steamers of 384,538 gross tons or approximately 25 per cent. This net increase is accounted for through the construction of 284 steamers of 768,325 gross tons and the purchase of 43 vessels of 130,817 gross tons and the loss of 30 steamers of 131,677 gross tons through enemy action, of 75 steamers of 123,783 gross tons through marine risk, and of 43 steamers of 180,141 gross tons through sale to aliens and through miscellaneous adjustments amounting to 78,003 gross tons.

During the period of greatest submarine activity, when the needs for our armies in France were rapidly outgrowing the capacity of available shipping, the Shipping Board seized an opportunity to secure 280,000 tons of Japanese vessels at short notice. About 150,000 tons were chartered to us immediately, and we furnished the steel to complete 130,000 tons which were then under construction. The latter vessels were completed and delivered to us at a record speed. The completion of this tonnage left idle thirteen highly efficient Japanese shipyards capable of turning out ships faster than we could possibly expand our own facilities at that time and get anything like equal results. The demand for ships was still the crux of the military situation in France, and the Shipping Board did not hesitate to give the Japanese yards contracts for thirty more vessels. Excellent progress has been made on these contracts, 80 per cent. of the steel having been rolled here and shipped to Japan.

The tonnage chartered from Japan is being returned to them just as rapidly as shipping conditions will permit.

Japan has developed great shipbuilding power. She is developing new sources of steel supply in China with a view of becoming less dependent upon Europe and America for plates. At the same time it is proper to mention the fact that there is a surplus of shipbuilding steel in England on which the British authorities are granting preferential ocean freight rates to the Far East.

The number of shipways in Japan on January 1, 1919, was 145. The annual normal capacity is 1,200,000 tons. The annual maximum capacity is estimated at 1,700,000 tons. Japan expects to build during the year 1919, 181 steamers of 1,000 tons and over, aggregating a total tonnage of 1,189,280.

Sweden's Yards Busy.

During the war Sweden lost 185 vessels of 202,000 gross tons through the hostile action of the Central Powers. This loss constituted about 18 per cent. of the total merchant fleet of Sweden at the outbreak of the war. At the end of 1918, 50 ships of approximately 60,000 tons d. w. were under construction, a record in Swedish shipbuilding. The yards can get orders in almost unlimited numbers—some docks are engaged until 1923, but lack of materials limits the production. Plates which formerly came from England were badly needed during the war. When the English supply was cut off, they used plates of Swedish manufacture, which are good but not nearly sufficient. Besides building, all the Swedish docks are engaged in repairing, equipping, or lengthening steamers which shall sail on the enlarged canal to the sea.

During the first half of 1918 negotiations were carried on in London between the Allies and Sweden which resulted in an agreement whereby the Allies took over a considerable part of Sweden's tonnage. The Allies agreed to allow Sweden to import necessities and food stuffs under a guarantee against re-exportation. Swedish shipping received one advantage from the agreement. It was now possible for the rest of the Swedish tonnage to take up connections between Sweden and trans-oceanic countries in the open market, and perhaps this fact has in some measure covered the loss and risk of the tonnage destroyed.

During the autumn the Oresunds Yards, in Landscrona, launched its first ship. This dockyard has four ways, one of which can take ships up to 20,000 tons. Ten steamers from 4,000 to 8,000 tons are at present ordered or under construction at the yard.

Experience of the Norwegians.

Both in amount and percentage Norway suffered greater loss than any other neutral country. She lost 1,178,000 gross tons of shipping, which was 47 per cent. of her total merchant fleet in 1914.

At the beginning of 1918, 64 motorships and steamers were being built, of which 5 are of steel, 50 of wood, and 8 of concrete. All together 225 ships of about 200,000 tons were under construction in Norway. Many of these motorboats may have to lie idle as soon as they are finished for lack of oil.

In this connection, the "Verdens Gang" of Christiania says that Swedish shipping interests have 55 ships, of 142,000 tonnage in all, on order at Norwegian yards. However, shortage of materials prevents a large number of these ships from being built, and the Norwegian Government may prohibit the sending of a considerable number to Sweden while the Norwegian need is so great.

Several new shipyards have been built in Norway and old yards have been put in repairs and enlarged both technically and economically. At first it was difficult to get the necessary materials, while in 1918 the exportation of iron from iron-producing countries was absolutely at a standstill, and it was not until the end of the year that many shipments moved. Therefore it has been necessary at several shipyards to reduce their working force and exercise economy. In order to prevent unemployment, it was necessary during the year to reduce the number of working hours.

Norway and America later entered in an agreement which guaranteed Norway shipments to meet her needs in such quantities as would not hurt the Allies. No goods imported from the United States must go to the Central Powers or replace goods going to the Central Powers.

The director for the Norwegian "Veritas" has stated that it will certainly be difficult to replace the great loss in ships within a reasonable time, because all shipbuilding countries will first attend to their own needs. It was therefore important that the Norwegian ship and machine workers should be increased in order to build ships of a size which will be in demand after the war, namely, steel ships of 5,000 to 15,000 tons d. w., supplied with the most economical engines and machines.

Concrete shipbuilding has shown a remarkable development. Norway was the first to take up this industry; the first concrete ships have been put in commission and the building methods used in Norway have been copied by several other countries.

Tonnage Situation of Denmark.

An analysis of Lloyd's registers shows that the 429 steamers of 737,532 gross tons, 500 gross tons and over, in the Danish merchant marine as of June 30, 1914, had decreased to approximately 329 steamers of 600,000 gross tons as of June 30, 1918, a decrease of approximately 100 vessels of 137,532 gross tons, or nearly 20 per cent. in tonnage. Denmark's losses due to enemy action were unusually heavy, amounting for the period to 143 steamers of 219,000 gross tons. Losses by marine risk of 17 steamers of 23,137 gross tons were slight in comparison, while sales to aliens of 62 vessels of 96,606 gross tons almost equaled Denmark's foreign purchase of 122,559 gross tons. New construction amounted to 60 steamers of 90,922 gross tons. Miscellaneous steamers dropped from registry or broken up account for the remainder of the decrease.

Spain, Too, Suffers Heavily.

An analysis for 1914-1918 shows that the Spanish steam merchant marine, 500 gross tons and over, which included 397 steamers of 864,395 gross tons as of June 30, 1914, decreased to approximately 300 steamers of 650,000 tons as of June 30, 1918, a decrease of 97 steamers of over 210,000 gross tons, or approximately 25 per cent. This decrease is due largely to the heavy losses inflicted by enemy action of 77 steamers of 165,930 gross tons by marine risk, 34 steamers of 73,591 gross tons, and to sales to aliens of 31 steamers of 59,759 gross tons. New construction amounted to 15 steamers of 35,448 gross tons and foreign purchases to 25 steamers of 47,650. Miscellaneous adjustments account for the remaining difference. Four years ago the shipbuilding industry in Spain was confined almost wholly to the yards of the Sociedad Espanol de Construction Naval at Ferrol, Cartagena, and Matagorda, and those of the Compa Buskalduna and the Astilleros del Nervion at Bilbao. Now there are a number of new establishments.

Greece's war losses were 338,000 gross tons, or approximately 40 per cent. of her pre-war fleet.

The war losses suffered by Holland were much less than that of most other European countries. She lost approximately 200,000 tons of shipping, or 14 per cent. of her merchant fleet in 1914.

WEEKLY NEWS LETTER

Contributed by American Federation of Labor

"Dummy" Directors Not Wanted

Editor Baine of the Shoe Workers' Journal applauds the Massachusetts State Federation of Labor for refusing to indorse a bill that would permit corporations to provide for the representation of employes on their boards of directors.

The labor editor suggests that employers permit trade unionists to run their own affairs before they (the unionists) are invited to share in the management of the business of some one else.

The bill was introduced in the State Legislature by Senator Loring, an executive of the Plymouth Cordage Company. In support of the bill, the law maker said:

"I have tried many experiments. I have tried profit sharing, bonuses, workmen's committees, and all those things, and every one of them failed when time of stress came."

Editor Baine calls attention to the employer's failure to mention collective bargaining.

"It is to be expected that an executive committee of the board of directors would run the business and the employe director would be called in only on certain occasions, principally when it was desired to impress them with some idea in the firm's interest relating to its labor policies. Such directors would be selected by the management of the business or by the stockholders, and would have to be perfectly acceptable to the stockholders and to the directors."

Editor Baine predicts a new crop of these schemes which are intended "not to solve the labor problem, but to circumvent it."

Excessive Turnovers.

In recounting the turmoil that existed before the United States Employment Service took charge of the labor situation, and replaced private agencies, the bulletin of this service says:

"During the first five months of our participation in the world conflict, the recruiting of the industrial army—the manning of the growing ship yards, and other war projects—was a haphazard affair. War industries stole labor from one another. Plants took on 500 men on Monday morning only to lose 400 the next Saturday. Unscrupulous private fee-charging employment agencies and labor scouts grew fat on labor turnover. Some manufacturing districts were crippled as to output because of labor shortage, while others had a surplus of workers.

"Thus was forced upon the country general recognition of the urgent necessity for a central agency of the government which would intelligently assemble and distribute the labor power of the country and stibilize employment conditions."

The Congress that adjourned March 4 refused to appropriate funds to continue this service, and it is probable that the "fee-charging employment agencies" will again profit by labor turnover. These agencies were the most bitter opponents of the Federal Employment Service, and were aided by employers who want an employment system that can be depended upon to supply strikebreakers.

Evil of Child Labor Not Removed in U. S.

The children's bureau of the United States Department of Labor warns the public that the new child labor bill passed by the last Congress does not eradicate this evil. It is shown that there are approximately 2,000,000 working children between the ages of 10 and 16 in this country and that considerably under 300,000 of these children are in occupations coming within the scope of the Federal Child Labor law. The remaining thousands of working children will have only such protection as is afforded by the widely varying laws of the States in which they live.

"While the law is undoubtedly a step in the right direction," says the bureau, "even after it is in force young children will be able to work at some time, in some occupations, in practically every State in the Union, and in many States boys and girls will be permitted to work long hours."

Attention is called to the fact that the laws of most States fail to protect children in agriculture and domestic service, although the farm children, according to the census of 1910, constitute about three-fourths of the working children of the United States.

Public Voting on Strikes.

A bill before the Washington Legislature shows a new wrinkle in the campaign to stop strikes by law. The latest is that no strike shall be called until after a vote by the organizations involved, taken under the direction of the public election officials after 30 days' notice.

An employer is not interfered with in his right to close down his plant for any reason or no reason, but if his employes would suspend work to enforce their demands, the employer is given 30 days' notice with public officials controlling the election before employes can quit work.

The plan was considered so seriously by legislators that a delegation of trade unionists appeared before a Senate committee to voice their protest.

"This is class legislation of the most glaring kind," declared President Short of the State Federation of Labor. The unionist told the lawmakers that if they passed the bill they will fill the jails with working men, "and all you would accomplish woud be to bring law into disrepute."

"If you want to quiet the unrest of labor," he said, "you must remove the cause of that unrest. Efforts to resist increases in wages without efforts to reduce the cost of the necessaries of life will fail, and they ought to fail."

Martin Flyzik, president of District No. 10, United Mine Workers, told the committee that strikes do not start from the agitation of labor officials. They come, he said, from the disaffection, the mistreatment or from grievances, real or fancied, felt by the workers themselves.

World's Workers

A recent example of the militant attitude of the Japanese workers is interesting: At one large iron works in Osaka a steamer of 10,000 tons was to be launched on August 21. The officials of the plant had invited a number of prominent men to a garden party to celebrate the event. Three days before the date set for the party it was called off. The workers in the dockyard had vetoed it on the ground that so long as the rice crisis prevailed they would not consent to "any wanton expenditure of money." A special squad of police was then ordered to keep the dock workers in restraint.

The agreement of the Negro and native population of South Africa to refrain from political agitation for the duration of the war was formally renounced at a mass meeting of the colored citizens of Claremont called by the African Political Organization. An aggressive campaign of organization and agitation was determined upon with a view to combating discrimination against the colored people of the Union. A resolution supporting "any action the African Political Organization may take to obtain the deletion of the 'color bar' from the Act of Union" was unanimously adopted.

The "Daily Mail" (England), in a leading article demanding the immediate establishment of the long-delayed Ministry of Health, refers to the speech of Sir Auckland Geddes, and declares: "Bad housing, insufficient feeding, insufficient light, air, sleep, and recreation were the causes to which the speaker attributed this terrible national stain of consumption. All these causes can however, be put in two words, 'cheap labor.' The British people were a healthy people prior to the great industrial era of last century. It was the 'Manchester School' of frec-trade—(More accurately the profit-making code and creed of Capitalism)—based upon cheap labor, packing millions of human beings into close quarters, running up wildernesses of ramshackle, jerry-built homes, piling up factories constructed only with the object of sweating the last ounce out of human machines that sowed broadcast the seeds of disease and converted an A1 population into a C3 population."

The working of proportional representation at the recent German election deserves careful study. The Germans followed the usual Continental system. The constituencies are very large (only 38 in the whole Republic) and each returns from 6 to 16 members (average 11.) The voting is by lists. Each party, or any local group of 50 electors, may present a list, which may contain as many names of candidates as there are seats. The order of the names is fixed by the party. Electors then vote not for individual candidates, but for party lists. The votes cast determine how many candidates of each list are elected, following the prearranged order. Thus the more valued names, which come first in each list, are fairly sure of election. Combination (Verbindung) of two lists is permitted, but has rarely been tried at this election. The system is less accurate than that advocated by the late Lord Courtney, and gives more power to the disciplined party and less to individual choice, but is simpler, and makes for strong leadership.

Pacific Coast Marine.

According to Commander H. W. McCormick, U. S. N., who is at Eureka, Cal., it is probable the former Marconi wireless station at Fort Humboldt will be dismantled and abandoned. The Marconi station is superfluous because of the naval station on Table Bluff.

A new class in Navigation was organized at the Public Evening Navigation School in the Ferry Building, San Francisco, last Monday evening. The course has been shortened and made as practical as possible. No tuition is charged, the student being required to furnish text book only.

The War Department has authorized the survey of the Willamette and Columbia rivers from Portland to the sea, with a view of widening and deepening the channel. Colonel Zinn of the United States Engineers corps will have charge of the work. It may be possible the channel will be deepened to 35 feet and widened to 600 feet. The present depth and width are respectively 30 and 300 feet.

San Francisco Harbor authorities have been notified by the commandant of the Twelfth Naval District that the barracks and headquarters used by the port naval guard on pier 7 will be retained after April 1, the date set for the termination of the lease. It is said the Navy Department plans to use the barracks to care for the guards stationed at the Union plant of the Bethlehem Steel Corporation and possibly also for the crews of the torpedo boats.

The enemy alien inspection detail of the Navy, headed by Lieutenant-Commander Randall Rogers, has been discontinued, and the future investigations on the ships and the San Francisco water front will hereafter be exclusively in the hands of the customs officials. This was announced during the past week when Rogers and Lieutenant Plunkett, the only remaining members of the detail, reported for ship duty at the Ferry building office of the Navy.

Captain A. Carlson, of the steam schooner "Yellowstone," declares the Coos bay bar is badly shoaled with sand washed in from the south spit by the winter storms. Captain Carlson said, also, that in one or two places the channel has been narrowed notably, and navigators are obliged to hug the old jetty closely for safety. The bar, although there are occasional days when it should be smooth, breaks almost constantly, according to Captain Carlson, owing to the shoals.

The bark "Aryan," which burned at sea December 24, 300 miles west of Chatham Island, lost a cargo destined for San Francisco worth approximately $500,000, according to advices just received by the marine department of the San Francisco Chamber of Commerce. The vessel, which was owned by L. A. Pedersen of this city, was not insured. Captain Larsen and thirteen men landed on Chatham Island, but no trace ever has been found of the other eight members of the crew, so far as local shipping men know.

A libel action instituted by the Great Western Power Company against the Western Fuel Company and the Nippon Yusen Kaisha for $24,940.50 damages has been filed in the United States District Court at San Francisco. The plaintiffs declare that the liner "Kanagawa," owned by the Nippon Yusen Kaisha, and the barge James Nesmith, permitted their anchors to drag across the power cables of the Western Fuel Company from pier 18 to the Alameda side of the bay. The cable, it is alleged, was damaged to the extent of the sum demanded.

Addition of two steamers to the present fleet of the South American Pacific Line, operating between Seattle, San Francisco, San Pedro and Colombia, Ecuador, Peru and Chile, was announced by Bjarne Lindvig, general agent of the line at San Francisco. The steamers are the "Regulus" of 7000 tons and the "Rex," 2200 tons. The "Regulus" is now in the transatlantic trade for the Shipping Board, while the "Rex" has been but recently completed in a Stockholm plant. The steamers now on the company's runs are the "Baja California," "Sinaloa" and "Governor Forbes."

The handicaps of steel shipbuilding in British Columbia were summarized in a recent issue of the Journal on the authority of a Canadian official report. That British Columbia offers advantages, however, is attested by the fact that Yarrow & Co., Ltd., intend gradually to diminish their output from their works at Scotstoun on the Clyde and increase their works on Vancouver Island, which have so far chiefly dealt with ship repairing. The Yarrow plant is situated at Esquimalt and covers an area of 8 acres. It has constructed small work for India and marine engines for both the Emergency Fleet Corporation and the Imperial Munitions Board.

Freight tonnage of 1,375,822 tons was handled at the Sacramento, Cal., municipal wharves during the calendar year of 1918, according to the report filed by Harbor Master W. I. McQuillan. Stern-wheel steamers handled 1,081,367 tons; gasoline steamers, 14,095 tons; gasoline towboats, 9615 tons; gasoline launches, 3298 tons, and barges, 267,447 tons. The belt line railroad running parallel to the warehouses along the river front handled 8852 cars during the year. The steamer "Fort Sutter" is the largest boat plying regularly on the river and runs between Sacramento and San Francisco. She displaces 801 tons. There are a number of 600 and 700 ton steamers plying the stream.

Shipwrecked and abandoned on the Lower California coast, and for sixty-six days subsisting on turtle meat and such fish as they were able to catch with crude equipment, was the story related at San Diego by two members of the wrecked power schooner "Louise." The "Louise" was one of a fleet of four vessels purchased from Thomas Crowley by the Mexican Government for lighthouse service along the west Mexican coast. The "Louise" came to grief south of Magdalena bay, while another craft of the fleet, the "Cleopatra," was wrecked in Scammell's lagoon, south of Ensenada. Bustamente and Avalos made their way to Turtle bay, where they encountered a Japanese fishing boat that brought them to San Diego.

Although the Humboldt Steamship Company, a concern engaged in the Seattle Skagway Alaskan trade for twenty years, has sold its Humboldt built steamer "Humboldt" to James Jerome of San Francisco, it is strongly rumored the company does not intend to go out of business and even now is looking about for a larger and even better vessel than the "Humboldt," in order to resume in the Alaskan service. Such a vessel, it is said, must be of steel, with modern passenger accommodations. It is indicated that if a purchase is made, it will be on the Atlantic coast. Further rumor, from a source considered reliable, has it that the Humboldt Steamship Company is increasing its capital and may soon own a fleet of vessels operating on the Pacific Coast.

The Key Route ferry "San Jose" was destroyed by fire as she lay in her berth at the Oakland mole on March 23. Smoke was seen pouring from the boat by Chris. Petersen, watchman, who turned in the alarm. Within ten minutes the boat was enveloped in flames. A general alarm was sent out and fire boats from San Francisco responded. The United States Navy tug "Vigilant" from Goat Island helped the fire boats tow the "San Jose" into the stream. The Key Route ferry service was tied up for forty minutes. There was no loss of life, as the "San Jose" was not in commission at that hour, but the property loss is serious. A volunteer fire brigade of employes fought the flames from each side of the slip until the ferry boat was towed into the stream. For a time the fire threatened to destroy the pier. As a precautionary measure more than fifty cars of the Key Route system, lined up on the tracks, were driven off the pier. The "San Jose" was built by Thomas Dickie in Alameda in 1903 at a cost of $275,000. She was the oldest in point of service on the Key Route run. Officers of the company stated that the replacement value of the boat at the present cost of material and labor is $400,000.

Pacific Coast shipbuilders have held conferences with Emergency Fleet Corporation officials to protest against the wholesale concellations of building contracts. It is reported that a way will be found of changing the specifications of earlier contracts so as to avoid cancellations necessitating scrapping of sound material. Thus, the Northwest Steel Co. had ten boats cancelled, but two were reinstated, making a total cancellation of eight. The G. M. Standifer Corp. had five cancellations out of 15 contracts, though material is on the ground or on the way for completing a total of 13 boats. The Columbia River Shipbuilding Corp., which had 8 cancellations, had two reinstatements, while the Albina Engine & Machine Works has obtained two reinstatements out of 4 cancellations. The wood shipbuilders of the Oregon district have not fared so well. Of 126 wooden vessels originally placed by the Emergency Fleet Corporation, less 26 recently cancelled, 88 have been launched and 38 remain to be floated. There have been 38 completed ships formally delivered, and 88 remain to be turned over, though many of them have been finished so far as builders are concerned. Changes ordered are responsible for the delay. Of the 38 hulls on the ways, several are to be converted into schooners or barquentines, if found practicable. Some of the ships yet on the building berths are so far along that to change them into sailers—especially those of the Ferris design—is held to be a poor plan, and only the last ones started offer opportunity for conversion into ships to carry a sufficient spread of canvas.

F. R. WALL, who was for many years an officer in the United States Navy, is now practicing marine law in San Francisco. He gives claims of all seafarers careful attention. 324 Merchants Exchange Bldg., 3rd Floor. California St., nr. Montgomery. Phone, Sutter 5807 (Adv.)

The Seamen's Journal

Published weekly at San Francisco
BY THE
SAILORS' UNION OF THE PACIFIC

Established in 1887

PAUL SCHARRENBERG.....Editor
S. A. SILVER.....Business Manager

TERMS IN ADVANCE.

One year, by mail - $2.00 Six months - - - $1.00
Advertising Rates on Application.

Business and Editorial Office, Maritime Hall Building, 59 Clay Street, San Francisco. Telephone Kearny 2228.

Changes in advertisements must be in by Saturday noon of each week.

To insure a prompt reply, correspondents should address all communications of a business nature to the Business Manager.

Entered at the San Francisco Postoffice as second-class matter. Acceptance for mailing at special rate of postage provided for in Section 1103, Act of October 3, 1917, authorized September 7, 1918.

NOTICE TO CORRESPONDENTS.

Communications from seafaring readers will be published in the JOURNAL, provided they are of general interest, brief, legible, written on one side only of the paper, and accompanied by the writer's name and address. The JOURNAL is not responsible for the expressions of correspondents, nor for the return of manuscript.

WEDNESDAY, MARCH 26, 1919.

A SHAM BATTLE.

A terrific and seemingly merciless battle of words has been raging for months past between the two principal evening papers of San Francisco, the Call and the Bulletin.

No method of attack has been too mean to gain a point. All printable cuss words have been used and re-used, and every evil motive has been attributed to the other fellow in the fight.

Suddenly, however, these two self-styled gladiators for human rights have found a common ground.

Upon one single issue they do agree!

Both have published soul-stirring editorials in furtherance of the same noble cause—the right of the small boy to sell and deliver newspapers before school and after school, and in fact any time to suit the convenience of these two great moral engines!

Talk about the venal press!

Well, nothing has ever happened that could better illustrate the cheerful willingness of "great" newspaper editors to surrender promptly and abjectly every principle of reform when their own interests are affected.

Child labor, they concede, is bad, vicious, intolerable, etc., in all cases except where it is helpful in their own busness, i. e., when it fattens their own purse. In that event child labor is performing a glorious and noble function and all those interfering with the commercial exploitation of the little boys who peddle papers are meddlesome agitators who ought to be deported for trying to meddle with legitimate business!

No wonder there is a growing demand among the American people for real newspapers, free and unhampered by selfish private interests! No wonder cynicism is rampant—because thinking persons who read and try to digest the editorials in the daily press find it more and more difficult to retain ideals or hopes for a greater and better world.

So, here's success to the new daily about to be established at Minneapolis by the organized farmers and workers of Minnesota. If that paper can be made a success then there is no good reason why other sections of the United States should not follow the example of Minnesota. At present, about the only remaining "free" press is the Labor press. And it should be distinctly understood that this assertion is not intended to cover those labor papers owned by private parties and conducted "for profit only."

THE COST OF POWDER.

What the war has done for the manufacturers of shot and shell may be gathered from the following news item in a recent issue of the New York Times:

The stock of E. I. du Pont de Nemours Powder Company, the predecessor of the E. I. du Pont de Nemours & Co., sold during the early months of the war at $125 per share. The share of debenture stock and two shares of common stock of E. I. du Pont de Nemours & Co., which were exchanged for the former security, are worth in to-day's market (December 31, 1918) $593, or an increase in value of 374 per cent. In the meantime (1915-1918) the total dividends on the common stock of the E. I. du Pont de Nemours & Co. have amounted to 458 per cent. on the par value of the original stock. It is difficult to imagine a more satisfactory financial result.

Yes, "it is difficult to imagine a more satisfactory financial result" for the Powder Trust. But it is still more difficult to understand why self-governing people have permitted this sort of profiteering.

That the issues involved in the private manufacture of arms, munitions, etc., are clearly understood by the organized workers is evidenced by the adoption of the following resolution (introduced by the editor of the JOURNAL) at the American Federation of Labor convention in 1914:

WHEREAS, One of the main causes for the maintenance of large military nad naval establishments, and which is a standing menace to peace between nations, is to be found in the fact that patent rights on and the manufacture of arms, munitions and implements of war are in the hands of international combinations of capitalists, who sell their products indiscriminately to the governments of the world and promote the sale of such products by arousing and encouraging feelings of national prejudice and jealousy and by employing the press and the officers of the army and navy to produce periodical war scares in different countries; and

WHEREAS, This menace to international peace can be eliminated and the ultimate disarmament promoted by having the Government manufacture its own equipment and articles used for war purposes; therefore, be it

RESOLVED, By the American Federation of Labor, in Thirty-fourth Annual Convention assembled, that all patent rights for arms, munitions and other equipment to be used for war purposes should be acquired by the Government, and all such equipment should be manufactured in Government establishments.

Surely, the lessons taught by the war should go a long way to carry into effect the aims and purposes of this resolution.

As long as we must have a shot and shell industry—and present indications are to the effect that it will be a long, long time—private interests should not be permitted to reap 458 per cent. in dividends on the investment in such industry. And this apart from the fact that it is not compatible with national interest or the interest of humanity to foster any private industry which, in the very nature of things, will always longingly look forward to the next war.

WAGES AND HOURS "BY LAW."

The value of economic power, as against legislative action in the adjustment of wage rates is strikingly shown by a survey of the District of Columbia by the Department of Labor.

Wages paid in Government departments, union and non-union establishments are included. It is found that the Government pays the lowest wages, non-union establishments pay more and union establishments pay the highest.

The following figures illustrate the value of trade-union action as regards wages:

Blacksmiths — Government, minimum $200, maximum $1000; non-union establishments, minimum $1565; union establishments, minimum $1670, maximum $1716.

Carpenters—Government, minimum $720, maximum $1565; non-union establishments, minimum $1095, maximum $1878; union establishments, minimum $1716, maximum $2002.

Electricians—Government, minimum $720, maximum $1500; non-union establishments, minimum $1252, maximum $2080; union establishments, minimum $1718, maximum $2288.

Machinists—Government, minimum $840, maximum $1800; non-union establishments, minimum $1252, maximum $1817; union establishments, minimum $1602, maximum $1716.

Plumbers—Government, minimum $720, maximum $1565; non-union establishments, minimum $936, maximum $1486; union establishments, minimum $1716, maximum $2288.

The doubtful advantage of attempting to regulate the length of the working day "by law" has been brought to public attention by the curious attitude of the present California Legislature.

Several years ago the California Legislature enacted an eight-hour law for women. Now, it appears, the laundry proprietors of Los Angeles find it to their advantage to work their employes nine hours per day in weeks having holidays. They presented their case to the Assembly (the lower house of the Legislature) of the great State of California and that body, despite the vigorous protest of the organized laundry workers throughout the State, has voted to comply with the request of the Los Angeles laundry owners. Fortunately, the organized laundry workers are well able to maintain their eight-hour day by virtue of collective bargaining and trade agreements. Moreover, the reactionary amendment has little chance of passage in the more progressive State Senate, but this incident clearly illustrates that the shorter workday established "by law" can be lengthened "by law" without the consent of the workers.

Those trade-unionists who want to regulate the length of the working day and establish wage schedules "by law" should find ample food for serious reflection in the foregoing facts and figures.

USES OF THE BOYCOTT.

After all the abuse heaped upon that good old-fashioned weapon of the labor unions, the boycott, international in scope, is to be used by the proposed League of Nations to stop war and check aggression. Article 12 provides that where a dispute can not be settled by diplomacy, war shall not be resorted to until after the case is referred to arbitration or a recommendation is made by the league's executive council. It is further agreed that war shall not be waged against a member of the league that has complied with the arbitration award or with the recommendation.

Provision for the international boycott is contained in Article 16, which reads as follows:

Should any of the high contracting parties break or disregard its covenants under Article 12, it shall thereby, ipso facto, be deemed to have committed an act of war against all the other members of the league, which hereby undertake immediately to subject it to the severance of all trade or financial relations, the prohibition of all intercourse between their nationals and nationals of the covenant-breaking state, and the prevention of all financial, commercial or personal intercourse between the nationals of the covenant-breaking state and the nationals of any other state, whether a member of the league or not.

All of which seems quite proper and eminently fair.

However, let the labor unions attempt to boycott some notorious exploiter of child labor and, lo and behold, some injunction judge can always be depended upon to issue

a restraining order commanding Tom, Dick and Harry to cease from advertising the peculiar virtues of the aforesaid exploiter.

Everything, it seems, depends upon precedence and custom. For custom is a tyrant which ever made a slave of reason.

MILITARY TRAINING.

The American Union Against Militarism reports that after three years of compulsory military training for all boys under eighteen years of age—whether in school or not—New York State seems ready to abandon the unprofitable experiment. Governor-elect Smith has appointed a "Reconstruction Commission" with authority fully to investigate the compulsory military training system installed under the Welsh-Slater Acts and to see whether some other sort of training, like vocational training, might not be substituted for it. That Commission has been holding sessions, hearing witnesses and is reported to be ready to recommend that vocational training be substituted for military training.

Among the complaints made against the system was that the secondary schools were losing students,—parents preferring to send their boys outside the State where their studies would not be interrupted by military drill; the hardships inflicted upon the boys, some of whom had to go ten or twelve miles, at their own expense, to attend the weekly drills; the fact that in some communities the only buildings large enough for indoor drill were attached to saloons; that the number of "truants" was so large that the State authorities could not round them up; and that the value of the physical training was small compared with what might be secured in more direct physical training.

The American Union Against Militarism, which strenuously fought the enactment of the Welsh-Slater Acts, is filing before the various State legislatures, like Pennsylvania and Missouri, briefs showing the results of the New York experiment. The Union, which has permanent headquarters in the Westory building, Washington, D. C., has endorsed the system established in England under the new Educational Act by which physical training is provided for both boys and girls, beginning in the grades and extending through the secondary schools and colleges without the military features which the "jingoes" want to fasten upon the American schools.

The attention of the JOURNAL'S readers is especially directed to the article on page 9 under the caption "The Vindication of Nolan." "Persecution" is entirely too mild a word to use in connection with the Nolan-Mooney case. Some day, however, justice will prevail. The vindication of Ed. Nolan is only the forerunner of similar events in the life of Mooney and Billings, both of whom are now serving a life sentence. In the meantime, it behooves us to give aid and comfort to those who have carried the brunt of the fight for justice. Let us ever remember the old adage: "God helps the sailor but he must row." If it were not for the valiant battle put up in the beginning by a few loyal friends four men and one woman would by this time, most likely, have been railroaded to the gallows.

THE FUTURE OF THE WORLD.

A Discourse on the Probable Future Rule of the Proletariat and the Question of "Might vs. Right."

The following is the larger part of an article by Prof. F. G. Nicolai, of Berlin University, originally published in "Politiken" (Copenhagen) on December 1, and translated for the New York Nation. As the result of his criticism of his fellow-scholars for their attitude in defending the war, Prof. Nicolai was interned early in the war in Gaudenz Fortress, where he wrote "Die Biologie des Krieges," recently published in translation in the United States. A year ago he made his escape to Denmark by aeroplane.

To the question, what is the future of the world?, a man can give three answers: He can say what he knows, or at least what he believes, about the future; he can say what he hopes; and finally he can say what he fears. . . . The modern world possesses possibilities of a common life in freedom and fraternity. There is always a prospect that the world will achieve what it can achieve. This applies to states as it applies to individuals.

A new freedom and a new fraternity are in the world. But, unfortunately, as August Comte once pointed out, the new times have taken over a heritage from the old. Just now the most convinced adherents of the new era are trying to establish justice with the help of the old weapons of force. The sovereignty of force of individual states is to be strengthened by means of a world organization, and the excess of power of individual persons is to be limited by a progressive socialization. It has been forgotten that it was in order to establish justice between states that this cruel war was begun. And now in order to establish a system of justice, the proletariat is arming itself in the belief that it will realize its dreams by means of a dictatorship of force.

State agglomerations are in reality purely accidental combinations which have attained their importance only by the power of suggestion after centuries of propaganda. As an instance of this it will be recalled that early in the war all Germans declared that the cession of Alsace-Lorraine was a matter that could not even be discussed; to-day no importance at all is attached to the question. Does not that indicate with all necessary clearness that people, as so often happens, have confused the unessential with the essential? I was not, therefore, wrong when in 1914 I described the world war as a war of cannons against cannons. It was nothing else.

But now is beginning a much more serious struggle—the struggle as to what the individual has a right to possess. In this game is staked the whole of our former culture; for every one of us, even the most convinced communist, is intimately concerned with the question of the right to private property. The struggle, therefore, no longer involves indifferent questions of prestige; it involves deeply human principles.

This serious struggle, like all others, should be fought out only by means of intellectual weapons. The misfortune is that the struggle has begun at a moment when all the nations of the earth stand under arms. As a result, the danger arises that dead weapons will once more gain a victory over ideas. For this the former rulers must bear a large share of the responsibility; for it is no accident that developments have taken this course. In 1795 the Imperial Court of Vienna, fearing the threatening predominance of France, asked Berlin if it would not be well as a precaution to introduce universal service. The Prussian Government rejected the suggestion with the argument that such an armed power might develop into a peril to the existing order. Ten years later, however, Prussia was obliged to reconcile herself to the idea of raising a national army; and in the course of the following hundred years the national vanity of the masses increased so greatly that the Government, now free from fear or suspicion, was able to put the whole nation under arms. To-day people are awakening from that century-long dream; to-day universal service is avenging itself in a way that its creators could hardly have foreseen. The people, who formerly merely forged (and paid for) arms, have become accustomed to using them; and now, when nationalistic tendencies have disappeared, they will use them in their own way. The people have learned to understand the armed man's superiority over the unarmed. Formerly the masses stood against power. To-day the masses are united with power. That this struggle for the socialization of society will continue; that it will spread to all men and all nations in ever-widening, irresistible circles—so much I believe I know about the future.

What I hope is that a healthy and understanding idealism will awaken in the nations, and with it the conviction that a struggle of force will not in the end lead to the goal; because mass dictatorship will at last lead to individual dictatorship. It is quite true that Robespierre's ideas of freedom also influenced Napoleon; but nevertheless Napoleon was a roundabout road to freedom. The nations, I

DIED.

John J. Dunba, No. 913, a native of Massachusetts, age 62. Died at San Francisco, Cal., March 1, 1919.

Thomas Olsen, No. 642, a native of Norway, age 63. Died at Port Townsend, Wash., March 23, 1919.

Recently published annual reports of Japanese steamship companies continue to show extraordinary rates of profit. Thus the Osaka Shosen Kaisha shows for the half year ending December 31, 1918, a gross profit of Y51,340,000. Of this total insurance fund absorbs Y2,191,000; repairs, Y3,400,000; depreciation of fleet, Y1,781,006; special depreciation for new steamers, Y16,006,600, and war taxation, Y3,470,000, leaving a net profit, including Y1,085,000 brought forward, of Y25,577,000. The sum of Y1,228,000 is placed to reserve and Y613,000 to bonus for directors and auditors; Y3,000,000 is added to the fund for adjustment of value of steamers; Y2,000,000 each to the business extension, dividend equalization and pensions funds; Y1,000,000 to new building account, leaving Y2,527,000 to be carried forward after paying a dividend of 60 per cent.

OUR WASHINGTON LETTER.

(By Laurence Todd.)

Unemployment is rapidly increasing. Strikes have tied up the port of New York and the electric railway traffic in 141 towns and cities in northern New Jersey.

Railway managers and stockholders are in a panic because the entire body of employes in that industry are demanding higher wages.

Meanwhile the United States Employment service has run out of funds, and has cut down its force to only 20 per cent. of what it has maintained. Seven hundred employment offices in all parts of the country will be closed immediately unless local interests raise funds to keep them going until Congress appropriates money for them.

But Congress is out of session. The President refuses to call Congress until he returns from France. Nobody dares predict that date to arrive sooner than June.

And suppose Congress does meet in June; will it pass the appropriation for the Employment Service at once, and pass other legislation that will in any way take from the shoulders of the labor movement everywhere the burden of fighting for the right to work and the right to something better than a subsistence wage for a day's work?

The New York World, which has never been a pro-labor paper, says this in an editorial today:

"Congress is no longer representative of the American people. It does not realize that anything has happened in the world, and probably cannot be made to realize it."

That remark was not made with relation to labor issues, but merely as a taunt at the Republican majority in the new House, which has come under a completely reactionary leadership, as shown by the selections made for chairmen of the various standing committees. The Longworth-Gillett element, which is fighting the Jim Mann machine, is equally devoted to the big business interests, and equally innocent of any desire to advance the cause of industrial democracy in the United States.

But something is happening in the world, as the New York World suggests, that ought to wake up these politicians. It is the return of the fighting men of all countries to their homes. Most of these fighting men are hunting jobs—better jobs than they had before they went to war. Cruel fighting is going on in half a dozen parts of Europe to-day because there is hunger and desperation, and because jobs are few. In Germany the Ebert government is able to put down the Spartacan outbreaks, but it cannot stop the strikes except by promising to establish national ownership and labor-council operation of the chief industries. In Finland, with 60,000 trade unionists in exile and another 50,000 in prison, and with at least 15,000 of the leaders of the union and co-operative and Socialist movement executed or starved to death in prison camps, the parliamentary elections have just brought back a solid working-class majority—a peaceful revolution.

The State Department yesterday announced that the new Finnish parliament would meet on April 1, and that the Socialists, who will be in the majority, will demand full amnesty and restored suffrage to all "Reds," the disarmament of the White Guards, establishment of the eight-hour working day, and less stringent military law. The "Reds" are the trade union and co-operative membership, who made up the Red Guard army which was crushed by imperial German and White Guard armies a year ago. Now, under the guns of their oppressors, the workers of Finland have voted themselves back into power. The effect of this example elsewhere in Europe cannot be estimated at once.

Right here in America there is going forward a struggle almost as daring, and just as necessary, as was this peaceful revolt of the Finnish workers. It is the fight of the United Textile Workers of America to organize the Southern cotton mills and the few mills in the North and East that remain under the curse of the old terrorist conditions. The organization has sent broadcast over the country an appeal for funds for this campaign. At the head of one leaflet is a photograph of a group of striking mill hands—most of them children with stooped shoulders, deep-lined faces and in bare feet—who are making this struggle for the eight-hour day against the organized millionaires who own and run the mills.

Thirty thousand textile workers were locked out at Columbus, Ga., and other points, on Feb. 4, because they asked for the eight-hour day. Ninety-eight per cent. of the textile workers, especially those in the South, according to the statement of the union, are always within one week of the bread line. The prevailing hours in the Southern mills are sixty per week. The mill barons in many towns announce that they will keep their plants shut down until the workers surrender through hunger.

"Industrial autocracy, long hours of labor, low wages and bad housing conditions," says the strike appeal, "breed Bolshevism more quickly than anything else."

Director Densmore of the United States Employment Service, believes that the neglect of the unemployment problem is quite as serious a peril in the United States to-day as the reactionary employer. In his plea to local labor and business interests to keep open the employment offices which the Government has this week abandoned he says:

"The work of assisting soldiers, sailors, and war workers to suitable employment must be continued at all costs. . . It is the misery caused by widespread unemployment that breeds social unrest and disturbance and gives the agitator an opening."

Mr. Densmore is probably unduly alarmed about agitators. Talk with international union officers in the office building of the American Federation of Labor and you cannot find any anxiety worth mention, about agitators in the movement. What they are trying to overcome is the lack of agreement among the actively discontented members of their unions. The Seattle strike, for example, which the Secretary of Labor was hoodwinked by the Seattle employers into denouncing, is now known to have been a purely trade union affair, which has won the enthusiastic praise of labor officials at headquarters, and which has put a fighting spirit into smaller groups of labor men and women throughout the East. The word brought back by War Labor Board agents from New England and the upper Mississippi valley and the Southwest is that "The boys aren't scared at the word 'Bolshevik' when the newspapers fire it at 'em for proposing a strike. They've taken one good look at this new Congress and decided that 1919 is a fine year for trade union expansion."

Predictions as to the action of conventions of the American Federation of Labor are always rash. A few weeks ago it seemed that the issue of the Labor Party would create the biggest scrap when the delegates assemble at Atlantic City in June. Just now it is the Mooney strike that is getting attention among delegates-elect. Later on it may be the international situation—the League of Nations and its attitude toward working-class revolutionary governments.

But there is one topic that is going to draw that convention together and hold it together against the organized private wealth of the United States, and that is the railroad employes' bill for Government ownership and democratic operation of the railroads. The bill is now being drafted. It follows the general plan, which Glenn E. Plumb, attorney for the operative brotherhoods, presented to the Senate committee more than a month ago. It is the answer of the American labor movement to Burlesonism. It provides that the workers in the industry themselves, through the direct selection of one-third of the operating board and through indirect veto upon the Government's one-third of that board, shall control the railroad industry. Everyone is for it—the man who has always opposed political action alike with the man who has always stood for a Socialist program. Both sides claim that it is their own plan for handling the industries in the future. The only fellow who is opposing it is the one who stands to lose a cushioned job with no work attached.

Another subject for harmonious action in the big convention will be the preparations for the meeting, in Washington, next October, of the first international labor conference to be called by the labor commission created by the supreme council of the Allies at Paris. This conference will be apparently a conference of labor spokesmen selected as the result of the agreement for a League of Nations. If it be made up only of men chosen by the diplomats and premiers now in Paris, of course it will not amount to much except as an irritant to the French, British, Italian and Belgian labor movements. But if it be democratically chosen, then it will bring to the United States the real leaders of the organized wage workers of the Allied and neutral countries—the men in whose hands lies the destiny of the new Europe. We shall be able to hear and see the future parliamentary leaders, the future premiers, the future masters of the great industries of these countries. The educational value, both to the labor movement and to the general public, of such a gathering in the United States, will be beyond reckoning.

However, we need not become too grateful to the diplomats until we find just who is to name the delegates. We remember that last June the British goverment forbade Margaret Bonfield to come to the convention at Saint Paul. Last week the British government refused to let an American labor attorney cross the ocean on an American passport. In view of the absolute certainty that Ireland's freedom and independence will be debated at the A. F. of L. convention in June, let's not be too sure of what may be permitted by Premier Lloyd George in October. You couldn't expect him to consent to expose the minds

of honest American workingmen to the dangerous pro-Irish and pro-Russian views of the leaders of the British or French or Italian or Belgian labor movements if he could prevent it.

Meantime, Postmaster Burleson refuses to resign. Dave Lewis, the labor man who was supposed to be director of the wire service, secretly resigned two months ago, because Burleson betrayed the union agreement policy and began prosecuting the union men and women in the service. Thousands of resolutions demanding Burleson's dismissal by the President have reached here. But Burleson hangs on.

THE VINDICATION OF NOLAN.

The JOURNAL'S editorial and news columns have from time to time presented the facts in the persecution of Nolan, Mooney, et al.

In keeping with this policy there is reprinted herewith a striking human interest story written by Elenore Meherin, of the Call staff, on the dismissal during the current month, of the last murder charges pending against Edward D. Nolan, now President of the San Francisco Machinists' Union:

* * *

There was a box of crystals found in the basement and a tin of white flour—

For this a man was hustled out of his home at midnight, branded a murderer, thrown into solitary confinement, and, contrary to the law of the land, denied the advice of counsel. For nine months he was kept in jail without a trial. For twenty months he was held as an accomplice of one of the most vicious crimes in history.

Not in Germany, nor in darkest Russia, but in San Francisco, the man went forth free the other day. The police stated that there was not sufficient evidence even to warrant a trial.

Edward D. Nolan, one of the four men accused of perpetrating the preparedness parade bomb outrages, was held twenty months, his home was searched and his wife intimidated—because there was a box of Epsom salts in the basement and a tin of flour used by his children in pasting a kite!

The dismissal of the last of the eight charges is a sweeping indictment of the whole Mooney trial. Even the fury of the prosecution could not convert salt and flour into dynamite. The hour has passed, the bell has rung throughout the world when any man can call another "Bolsheviki," "anarchist," "pro-German," and thereupon, without fact or proof, push him and his family to destruction.

Nolan's family, perhaps, suffered more than he did in the persecution which came to an end recently. A man, a woman and two little children were the victims in this scapegoat theory of justice.

The man sat in the cozy, artistic living room of his little home the other evening and, without trace of bitterness, reviewed the circumstances of his arrest. The woman, who is still but a girl, slim in figure, ardent in speech, shook her head and, for a long time, would not even speak of her part in the brutalities of that haggard night.

Eight men had blustered into her room. Among them were Martin Swanson, Mike Burke, Barney Riehl, Peter Hughes, James Brennan and Ed Cunha. The children were in bed, but the noise awakened the boy and he heard and sat up in his bed, terror-stricken at the fearful fate which seemed to overhang his father. Nolan was at a machinists' meeting, where he had gone to submit a report from the Baltimore convention.

"They came about half past eleven," Mrs. Nolan said at last. "They started to pry about the house, opening cupboards and pulling little bottles out of the medicine chest. 'Every one else has confessed; you might just as well kick in,' they said. 'Make a clean breast of it.' They acted like foolish schoolboys and talked in high-pitched, nervous voices.

"I laughed at them. 'What are you driving at?' I asked. 'It's all Greek to me.' This made Brennan angry, and he thundered out, 'Well, it won't be Greek for long. It won't be Greek, but a rope, when we hang your husband.'

"No, they didn't terrify me. Would it terrify you?" Mrs. Nolan is not the hysterical type to be browbeaten to tears or hysteria. "But I knew it would alarm the children. They were making such a noise. They kept on saying the same things over again. They kept walking back and forth and shaking their fists at me and telling me to confess. Then Ed came home and they took him away. They never told us what he was charged with or mentioned the bomb. They stayed at the house until 2 o'clock. They left. 'Go to bed and get some rest and then come down to the district attorney and own up,' they advised.

"For nearly a week I was not allowed to see my husband, or even to know what had become of him. Then the district attorney's office told me to come down and I could see him. When I got there they took me into a room and four of them fired questions at me. 'What were those crystals in the basement?' Brennan asked. 'Saltpetre, eh? And that plaster of paris? Now, listen here, Mrs. Nolan, you might as well tell us when and how he made the bomb.'

"Again and again they told me they would hang my husband. They seemed to delight in the repetition. And when I laughed, Brennan cried out, 'Yes, you've been making bombs yourself for the last six months.' That was too absurd, and I laughed again."

Absurd it seemed in the presence of the clear-eyed, intelligent wife—the level-headed, far-seeing labor leader.

Both Mrs. Nolan and her husband are well poised and quiet in manner. There is nothing "red" in their viewpoint. Nolan is the last person whom one would suspect of fanaticism. He is a thinker and has a surprising gift of natural eloquence. His influence over his fellow-workers is undisputed. This probably made him a dangerous man, one ready to step into the breach made by the arrest of Mooney.

"I have never believed that the world could be reformed from without," Nolan said. "Petty violence does not bring permanent improvement. It is but a means of awakening interest in a grievous situation. We must work from the mind out. We must improve the understanding of men. We must make them ready through education for the better world to come. Only a crazy zealot or an insane man could have hurled the bomb that took the lives of ten people and maimed scores of others."

The arrest and terrible days that followed it took a heavy toll from Mrs. Nolan. It was she who worked from morning till night, running down every clew, collecting dozens of pictures and yards of film which were later used in the trial. It was she who, with Mrs. Belle Hammerberg, sister of Mrs. Rena Mooney, scoured the city and Oakland and Berkeley to refute the charges brought against her husband.

It was they who spoke before the laboring classes in every walk of life, bringing champions to the cause. Never in those nine months was there an hour of peace or rest. Then when her mission was accomplished and Nolan released from jail in the Hall of Justice, she collapsed, broken in health, but not in spirit.

"If we could forget it, but we cannot," earnest brown eyes looked straight ahead, troubled, but fearless. "You can have no idea of the terrible effect of which their father's imprisonment made on the children. The boy is 10 and the girl 6. They do understand, and the boy actually suffers every time the name of Tom Mooney is mentioned. He does not want to be connected with the case. But we cannot dismiss it."

"It is bigger than our interest," Nolan said. "It is as big as the interest of freedom and the nation. Just now San Francisco wants a semi-crooked administration which pays due tribute to influence, money and politics. But that day has a short tenure."

That day still maintains its power. The prosecution, whose aim was conviction, not justice, yesterday admitted the collapse of its case.

Perhaps the new day will bring also Free Justice—justice which looks both ways and is willing to defend as well as to prosecute—justice which seeks all the facts and asks not conviction, but truth.

Labor's Economic Platform

Following is the Economic Platform adopted by the American Federation of Labor:

1. The abolition of all forms of involuntary servitude, except as a punishment for crime
2. Free schools, free text books and compulsory education.
3. Unrelenting protest against the issuance and abuse of injunction process in labor disputes.
4. A work day of not more than eight hours in the twenty-four hour day.
5. A strict recognition of not over eight hours per day on all Federal, State or municipal work, and not less than the prevailing per diem wage rate of the class of employment in the vicinity where the work is performed.
6. Release from employment one day in seven.
7. The abolition of the contract system on public work.
8. The municipal ownership of public utilities.
9. The abolition of the sweat-shop system.
10. Sanitary inspection of factory, workshop, mine and home.
11. Liability of employers for injury to body or loss of life.
12. The nationalization of telegraph and telephone.
13. The passage of anti-child labor laws in States where they do not exist and rigid defense of them where they have been enacted into law.
14. Woman suffrage co-equal with man-suffrage.
15. Suitable and plentiful playgrounds for children in all cities.
16. The Initiative and Referendum and the Imperative Mandate and Right of Recall.
17. Continued agitation for the public bath system in all cities.
18. Qualification in permits to build of all cities and towns, that there shall be bathrooms and bathroom attachments in all houses or compartments used for habitation.
19. We favor a system of finance whereby money shall be issued exclusively by the Government, with such regulations and restrictions as will protect it from manipulation by the banking interests for their own private gain.

THE COST OF LIVING.

The cost of living has increased 75 per cent. in five years. The man earning $4.00 a day in 1914 could buy with his wages as much bread and meat—as much clothing and housing accommodations—as can the man who now receives $7.00 a day. The man whose wages have not increased to that extent has suffered a reduction in real wages.

Part of this increase in the cost of everything arises from restricted production and stimulated demand, and is legitimate. Twenty million men who in 1914 were engaged in producing food, making clothes, building houses and doing other useful work, have since been engaged in destroying things and have consumed more food and clothing than when they were employed in peaceful occupations. Other armies of men and women have been transferred from the production of useful things to the production of munitions, guns and other war supplies. The diversion of so much labor to the war industries and the consumption of such vast quantities of materials for war purposes have made it impossible to produce enough food and other necessities for everybody. Those who have money have bid in the limited supply and prices have risen higher and higher.

But this accounts only in part for the increase in prices. The corporations controlling the supply of food and clothing and other necessaries have taken advantage of these conditions and have extorted exorbitant profits. The report of the United Fruit Company (which controls the banana market) shows profits for the year 1918 of twenty million dollars, or within a fraction of 40 per cent. upon its outstanding stock. In 1917 the company paid its stock-holders 26.72 per cent. and in the two years preceding they received dividends equal to 66.44 per cent. of their holdings. In the last four years the Company has made over 100 per cent. profits. And, mind you, these profits are based upon the capitalization—not upon the actual investment. In all probability less than 50c in cash was paid in on each dollar's worth of stock issued and on which we pay dividends.

And the reports of the Packing Trust, the Leather Trust, the Woolen Trust, the Milling Trust and a score of other monopolies tell the same story. As far as the consuming public is concerned the regulation of prices has proven a farce. The only solution of this problem is public ownership. The only monopolies that should be tolerated in a democracy are monopolies owned and operated by the people for the people. —The Painter and Decorator.

CO-OPERATION IN GERMANY.

Voluntary Co-operation, and not State Socialism, is to be the basis on which the present Ebert Government of Germany will nationalize industries. Shortly after the Weimar assembly a Commission on Socialization was appointed to draw up a plan whereby industry was to be brought under popular control. This body, says the Wolff News Bureau, has finally, after a careful study of conditions, come to the conclusion that the most practical and democratic method will be that on which the Co-operative Movement carries on its productive enterprise.

Undoubtedly the Commission has been strongly influenced by the situation in Russia, where the Soviet Government, though strongly in favor of Syndicalist theories so far as manufacturing is concerned, has become largely dependent on the Moscow Union of Consumers' Co-operative Societies, which has taken up some of the most important productive industries on the invitation of the Soviet.

As in all the other belligerent countries, the German Co-operative organization thrived and developed during the war, and is well prepared to form the nucleus for the industrial system of the new Govenment. In 1914 the general membership of the societies affiliated with the Hamburg Wholesale Society stood at about 1,700,000 heads of families. Since then the number has risen to considerably over 2,000,000 heads of families, or about 10,000,000 individuals. Many societies, however, were not affiliated with the federation, so that the actual number of Co-operators in Germany is considerably larger.

REFORMS IN SWEDEN.

The Swedish Parliament on December 18 adopted, with the concurrence of all the parties except the Socialists of the extreme Left, a draft of Constitutional reforms prepared by a special Parliamentary commission. Under the present system Sweden has had a Lower House democratically elected and an Upper House elected by provisional assemblies, themselves chosen on a property basis. Payers of direct taxes, men or women, have the right to cast from one to forty votes for these assemblies according to taxable income. Corporations as well as individuals have votes, and plural voting is allowed. The two chambers of Parliament are constitutionally equal; assent of both is necessary to legislation and all questions come up simultaneously for discussion in both houses. Budgetary questions are finally decided by a majority vote, both houses voting together. The new system, introducing democratic methods, will probably result in a large increase of liberal and radical members in both Houses. In local, provincial, and Parliamentary elections alike it provides for universal suffrage for men and women twenty-three years of age and over without regard to taxes paid, and abolishes plural voting and the votes of corporations. The Upper House is still to be chosen by the provincial assemblies, but these are henceforth themselves to rest on a democratic basis. The electorate of the Lower House is increased not only by the enfranchisement of women but by an addition of about twenty per cent. to the present electorate in the shape of persons now excluded as receiving poor relief or on account of unpaid taxes.

The employer of child labor who reads his Bible probably regards with regret the assurance of the Savior that the Kingdom of Heaven is composed mainly of children, since he can not hope to start a factory or in any other way "invest capital" there.

The penchant for child labor displayed by employers in the South seems to indicate the need of a new definition of chivalry, as applied to employers of that section.

WORLD'S MERCHANT SHIPPING.

(Continued from Page 2.)

Belgium's war losses amounted to 99,000 tons, or 25 per cent. of her total fleet.

Brazil lost through war risk about 8 per cent. of her merchant fleet (25,000 tons).

Austria lost 393,000 tons of vessels during the war. These losses were due chiefly to seizures and capture by enemy countries, and constituted 37 per cent. of Austria's pre-war merchant marine.

The total steam merchant fleet of 100 gross tons and over under the German flag on June 30, 1914, amounted to 2,159 vessels of 5,291,000 tons. It was the second largest merchant navy in the world. Less than one-half of the German fleet of 1914 remained in German hands at the close of the war. According to the best information available 1,507,000 tons were in trade or in ports of Germany, Austria, and Turkey. The location of 334,000 tons was unknown. No doubt the major part of this was in German hands. Vessels aggregating 738,000 tons were laid up in neutral ports, and so far as can be ascertained, were still the property of German citizens at the close of hostilities. The outside estimate of 1914 tonnage in possession of Germany at the close of the war would not exceed 2,580,000. Germany's losses during the war were exceedingly heavy. About 2,111,000 tons (steamers of 100 gross tons and over) were captured or seized by countries at war with Germany. Seventy-nine steamers of 187,000 tons are reported lost through enemy action. Germany's losses through marine risk during the war cannot have been very heavy inasmuch as few German ships ventured upon the high seas during this period. Germany's losses from this source and other sources not mentioned above were probably about 400,000 tons, making Germany's total losses during the war of tonnage which was in existence in 1914 about 2,712,000.

Germany's fleet at the close of hostilities consisted, therefore, of 2,580,000 tons of 1914 tonnage which she still owned, plus about 740,000 tons which were built during the war making a total of about 3,320,000 tons.

The Labor Situation.

The labor situation throughout the world is vibrant. Experience of earlier generations has taught us not to expect a completely noiseless turning back of the war machinery to the uses of peace. Men who have labored under great strain yield their attention more readily to the agitator. The agitators abound. The blight of Bolshevism has been thrown out so that the winds of the earth might waft it everywhere to sap the good strength of humanity. We may count ourselves fortunate that the disruptive forces have gained no more headway. The tendency to disorganization has penetrated the labor unions themselves, notably in England, where strikes have been called without the sanction of the selected leaders.

The sober common sense of mankind is asserting itself, however, as we found at Seattle, wherever the undesirables seek to arrogate power. The most optimistic student of the labor situation today, however, must realize that it is a time for alert appreciation of new conditions and new necessities. Men in responsible places must be awake to the new voices that may be heard nor cling too long to outworn shibboleths. The matter is at the heart of national prosperity in whatever phase you view it. It is not saying too much to assert that the handling of the labor situation in any nation you may choose will determine that nation's success in shipbuilding and ship operating as well as in every other material department of her life.

The labor situation in England is peculiarly illuminating and I deem it expedient to include herein a few notes I made upon the situation while I was there. Strikes and threats of strikes have affected the shipyard areas. Stoppages of work have occurred at the Belfast, London, and Clyde shipyards.

At Belfast, shipyard and engineering workers, and municipal employes in the tramway, gas and electricity services, have been on strike, the demand being for a 44-hour week. The strikers numbered 40,000, about 60,000 other work-people having been thrown into idleness by the paralysis of industry following the withdrawal of light and motive power.

At London, ship repairers (engineers, shipwrights and carpenters, etc.) to the number of 10,000 have been on strike, the demand being for an advance of 15s per week in wages.

There have also been local and partial strikes among shipyard men on the Northeast Coast, dock workers in Manchester, electrical engineering workers in Edinburgh and shipbuilding and engineering workers in Leith.

Most violent of all the demonstrations that have so far taken place has been the action of the shipyard and engineering workers in the Clyde district. The men involved numbered something like 100,000, and they demanded a forty-hour week with no reduction in wages. A strong effort was made by the shipyard workers to have the municipal employes join them. Many of the strikes which have so far occurred had one very important feature in common: none of them were authorized by the governing bodies of the trades unions affected, and in

some cases they were emphatically repudiated by the trades unions executives.

The Future of Our Seamen.

The future is bright for those Americans who would follow the profession of the sea. My observations abroad convince me that there are no adequate reasons why America should recede from the very high standards of wages and conditions of life she has adopted for her seamen. Here in America there exists an idea that our seamen's wages are incomparably higher than in any other nation. The thought is widely propagated that these rates of pay for the labor of the men who operate our ships render it impossible for us to enter profitably into competition with the other great maritime nations, notably England. It is high time that the public mind were disabused of this misconception. I have obtained the facts regarding seamen's pay both in England and France. The facts will dismay those persons who are agitating for a lower wage scale on American ships. The data in my possession indicates indeed that the wage qustion is not an overshadowing one for those concerned with the future of our merchant marine. We are paying our seamen $75 a month. That fact is well known and frequently commented upon. England during the war paid her seamen $72 a month. That fact is not so well known. The British ships are manned by Englishmen to-day. So much has been said regarding the cheap Eastern labor that makes it possible for British ships to operate at great profit, that I deem it wise that you should know that practically every maritime nation of the earth has now turned toward the conclusion that it is better to operate their own ships with the labor of their own citizens. The war has witnessed a great falling off of the foreign labor employed under maritime flags. It is my conviction that the future will witness a development of this tendency along lines more and more nationalistic. Of course abolition of cheap Eastern labor and higher wages went hand in hand.

The French and Dutch also are paying high wages to their merchant crews. In Sweden the seamen's wage scale is even higher than in the United States. It is true indeed that Greece, with her comparatively small merchant marine, pays lowers wages, but that is not a matter of very great importance in determining the future policies of a merchant navy as large and powerful as that of England or America.

There is scarcely more reason for predicting a return of old and low wage scales among European seamen than of a reduction of American standards. Seamen of the world are well organized in whatever country you may choose for an example. They have behind them a long history of privation, of constant danger and of a rigid and tyrannical discipline. They have shared recently in the humanitarian benefits of a new civilization. They will never go back to the old order. No forward-looking man would ask it. No one who understands the force and power and value of the men who labor on merchant ships can expect it for a moment. It is true that a part of the wage paid by the European nations as well as by America consisted of war bonuses. It is problematical, however, how far the halting of hostilities will reduce war wages. The cost of living has not yet gone down for these men who performed such valiant service upon the seas. England has continued her war bonus as a wage increase.

Wages form but a part of the issue of the seamen's standards. Their conditions of living aboard ship and the recognition of their rights as citizens even upon the seas overshadow the wage question. A high and advanced position has been assumed by the Congress in recognition of the rights and prerogatives of seamen. The Shipping Board on its part has endeavored to provide quarters for merchant crews which are fit places for Americans to live in. The seamen of other nations I found during my stay abroad are intent upon obtaining the same treatment aboard ship.

The seamen's problem is a part of the great labor problem being deal with, in so far as general principles may be applied, by the commission on international labor legislation appointed by the Peace Conference at Paris. I have the honor to be associated with this Commission as a representative of the United States. Since my return to the United States the Associated Press dispatches have announced the acceptance by this Commission of two principles: (a) prohibition of labor by children under 16 years of age, and (b) uniformity of seamen's wages. No official statement has yet amplified this press announcement, but the reported action of the Commission reveals the importance universally attached to the seamen's problem in this day when so many great nations are acutely awake to the vital bearing of sea commerce upon their destiny.

The Facts on Operating Costs.

An investigation as extensive as conditions permit is being made into operating costs We are endeavoring to assemble all available data from which to obtain general ideas for the development of our maritime policy. One thing that stands out is the difference of opinion as to the importance of labor costs in ship operation. This element is only 10 per cent. of the cost of operation.

The cost of operating vessels, involves, in addition to the question of initial capital investment, the following points: (1) Wages of officers and men, (2) Insurance of the hull and machinery, (3) Bunkers and stores, (4) Harbor charges, fees, etc., (5) Maintenance and repairs. There are two methods of attacking the problem of operating costs; one is to gather data on the separate component costs and formulate these into hypothetical total cost figures; the other is to get the total cost figure from the ship operators themselves and analyze it into the component costs. Each method has its advantages and disadvantages, and lines are being thrown out in both directions in the hope that the results of each will serve to supplement the results of the other.

Data relating to the wages of officers and men are on hand, but it remains to be learned what are the number of officers and men carried by vessels of different types on different routes. There is no uniformity among the nations in this respect. The British navigation laws merely say that a vessel shall be "properly manned." The enforcement of this indefinite standard is in the hands of the surveyors employed by the Board of Trade, and the size of the crew actually carried on a given vessel is determined largely by the previous practice in that regard. Thus each vessel constitutes a law unto itself, and a proper knowledge of the subject will require an inquiry into the records of a great number of ship operators.

THE FUTURE OF THE WORLD.

(Continued from Page 7.)

hope, will realize that freedom and equality are not to be attained by relying upon mere brutal force; but that they are to be attained by the carrying on of a class struggle such as the proletariat used to carry on, that is, by disseminating the new ideas for the recreation of society by means of agitation and discussion.

What I fear is that the proletariat, in the delirium of victory, will commit the same blunders as the former rulers; that, incited by the first brilliant results, it will forget the lesson of the war that the sword is a foolish support, and that it will set to work to make world history with machine-guns, as the Bolsheviki are already attempting in certain countries. . . .

Concerning the practical consequences of this, I must add a few words. To carry on politics means to foresee the future correctly and adapt oneself accordingly. Once it is realized that a struggle for the world's socialization has begun, and that it must continue to the bitter end, then it becomes the duty of the capable and far-seeing man not to let himself be misled by any personal advantage of the former world order, but to do his best to seize time by the forelock and to act as necessity commands.

In countries where revolution is already raging that is not possible. During a revolution the holders of power always make the mistake of bowing to the inevitable so late that no one will believe that the concessions are voluntary. Scheidemann was called too late to a Ministerial post; the Kaiser abdicated too late; Haase should have come sooner, and so should the proclamation of the republic. It was also a mistake that Liebknecht was not put in a responsible position. When, in view of his undoubted popularity, I demanded this a month ago, even the radicals thought the plan too radical, but now most of them will admit that this method of providing for the future was the right one, for in a responsible position Liebknecht would undoubtedly have acted differently and with more circumspection than he is acting now. In countries in a state of revolution it is impossible to make concessions, because there is nothing more to concede. It is the people who then rule and act. . . .

But in the rest of the world something may yet be done. If any country—even the smallest—in recognition of the inevitable, took measures in generous manner for the new ordering and re-creation of society, that country would not only spare itself a violent revolution, it would also render the whole world an inestimable service. If once the proletariat saw that a social revolution could take place without bloodshed and military dictatorship, no man thereafter would be foolish enough to resort to such methods. A peaceful revolution, even in an out-of-the-way corner of the world, may be able to save the world. For it must be clear to every thinking man that what is now coming will threaten the world's higher culture more seriously than even a four-years' war. I believe that a peaceful revolution can take place, but it must take place immediately; to-morrow will probably be too late. . . .

Thanks to its political foresight, England has so far escaped revolutions; and this country (Denmark) has also recently been in advance of its time and has decided on wide-reaching reforms. But I do not believe any longer in reforms. Revolution must come; not the revolution which is put through by force, but ordered revolution fought with spiritual weapons.

The world can be saved if even one nation understands the message of the time. Is there such a nation? . . .

During the whole of the terrible world war I have been an optimist in this regard, but now I have become a pessimist. The domination of the individual is not dangerous; the individual can always be overcome. It is only the domination of the masses which no one can overthrow.

Labor News

John F. White, foreman in a shoe factory at North Abington, Mass., has been found guilty on 10 of 16 counts charging him with extortion of money from workers as payment for retaining their positions.

Judge Haus of the West Chicago avenue police station court has discharged union barbers who were picketing a non-union shop. The court held that the unionists have a right to picket. The union has secured agreements with other employers and both parties have set up mediation machinery to adjust future disputes.

The utter lack of adequate means of guarding the life and health of mothers at childbirth has led to the strikingly high maternal death rate found in a recent survey of a lowland cotton-raising county and of an inaccessible mountain county of North Carolina, says a recent report of the Children's Bureau of the Department of Labor.

For the first time in the history of Nova Scotia, coal miners and operators have met in conference and signed an agreement. The eight-hour day is established with the same 10-hour wage. As a result of the conference the Amalgamated Mine Workers of Nova Scotia has been merged with the bona fide United Mine Workers of America, and the check-off system established. Mediation machinery has been set up to adjust disputes.

After several weeks of investigation and discussion the Visalia, Cal., Teachers' Federation has voted to join the American Federation of Teachers, affiliated with the A. F. of L. In favoring this action the committee's report said: "In the event of its organization as a trade union, any assertion of the collective will of the teaching body of Visalia will receive readier and more attentive public consideration than has been the case under other circumstances."

In opposing a wage increase for judges of the New York court of appeals, State Senator Graves, of Buffalo, said: "We want more humanity in our justice. The courts to-day are loaded with men, 90 per cent. of whom could not earn outside what they are now paid by the State. In many instances they are lacking in that social sense, that human touch, that makes jurisprudence what it ought to be. They have not enough human sympathy. As long as the temper of the courts remains what it is to-day, I am opposed to increasing salaries."

Science threatens to junk the cossack system, which is being urged by large employing interests throughout the country. The cossacks were first established in Pennsylvania, but according to a statement by Colonel Roy Bacon in an address before the Pittsburgh Chamber of Commerce, the cossacks are doomed. Colonel Bacon is director of the Mellon institute, and recently returned from France, where he has been perfecting various gases for the United States Government. The Colonel expressed the oinion that tear gas in the future will be used in dispersing what he termed "striking mobs." This gas, he said, will replace clubs and revolvers. He says one drop of the gas would be sufficient to kill from 20 to 30 men.

You Want the Truth

This year there will be stirring times in the Nation. Under government censorship it is increasingly difficult for the average man to get the real meaning of the social and political movements of the day.

LA FOLLETTE'S MAGAZINE

will be specially represented at Washington and will analyze and present the news from the capital truthfully and fairly. Senator La Follette is making a real fight to lift some of the tax burdens from the common people and place them where they belong — on excess profits, war profits and surplus fortunes and incomes. Because of this he is being attacked more bitterly than any other man in public life.

Send in your order today.

INFORMATION WANTED.

The salvage case of S. S. "Princeton" which salvaged the S. S. "Ardmore," both vessels owned by Standard Oil Company of New Jersey, has been tried and resulted in an award of $7,500 to the crew. This amount has been received, and members of the crew of S. S. "Princeton" are requested to call for same at the offices of Mr. Axtell, One Broadway, New York, N. Y.

For the benefit of the widow of John Karus, lost at sea, October 17, 1918, at 2:15 a. m., according to the report in the official log of the barkentine "Aurora," will all members of the crew of that vessel who know anything about the ship, the condition of her rigging, before and after the accident, or anything that will tend to explain his disappearance, communicate with the undersigned attorney for the widow?—Silas Blake Axtell, No. 1 Broadway, New York City. 1-1-19

Ellis R. Nelson, last heard from at New Orleans, La., Nov., 1916, when on board U. S. C. G. S. S. "Davy," is inquired for by his mother Anyone knowing his whereabouts will kindly communicate with R. J. Nelson, 59 Clay St., San Francisco, Cal. 11-6-18

Members of the crew of the SS. "Munrio" who were on board said vessel at the time she salved the SS. "Curytibia" in the month of January, 1918, and who have not yet received their full share of the salvage award, will kindly communicate with or call on Silas B. Axtell, 1 Broadway, New York City. 10-23-18

Carl Hansen, a native of Soon, Norway, age 35, formerly a member of the Lake Seamen's Union, is inquired for by his mother, Marn Hansen, 778 Sixth Ave., Milwaukee, Wis. 8-17-18

Physical Department

(By Dr. Wellsman.)

Cleaning the System of Poisons.

Life is not merely to live, but to live well, eat well, digest well, work well, sleep well and finally—and to some people most essentially—to look well. What a glorious condition to attain, and yet how very easy it is if one will only adopt the morning inside bath.

Folks who are accustomed to feel dull and heavy when they arise, splitting headache, stuffy from a cold, foul breath, nasty tongue, acid stomach, can, instead, feel as fresh as a daisy by opening the sluices of the system each morning and flushing out the whole of the internal poisonous stagnant matter.

A glass of hot water each morning with one-half laxcarin tablet with it, before breakfast, keeps us looking and feeling fit.

Everyone, whether ailing, sick, or well, should, each morning before breakfast, drink a glass of real hot water, and take one-half or one whole laxcarin with it, to wash from the stomach, liver, kidneys and bowels the previous day's indigestible waste, sour bile and poisonous toxins; thus cleansing, sweetening and purifying the entire alimentary canal before putting more food into the stomach. The action of hot water and laxcarin is wonderfully invigorating. It cleans out all the sour fermentations, gases, waste and acidity and gives one a splendid appetate for breakfast. While enjoying your breakfast the hot water and the laxcarin is quietly extracting a large volume of water from the blood and getting ready for a thorough flushing of all the inside organs.

The millions of people who are bothered with constipation, biliousness, stomach trouble, rheumatism; others who have sallow skins, blood disorders and sickly complexions are urged to get a box of laxcarin, which costs almost nothing, or if desired six boxes which in the majority of cases is enough for the whole treatment, is sufficient to make anyone a pronounced crank on the subject of internal sanitation.

Laxcarin is sold by the Laxcarin Products Co. Price per box, one dollar. Full treatment, six boxes, five dollars. Will be sent postpaid upon receipt of cash, money orders or stamps. Substitutes must be refused. Department E-99, Pittsburgh, Pa.

Advt.

Members of the crew of the SS. "Gulf of Mexico" may obtain money due them for salvage services rendered to the bark "Portugal" by communicating with Silas B. Axtell. Attorney for Seamen's Unions, 1 Broadway, Room J, New York City. 10-16-18

When making purchases from our advertisers, always mention The Seamen's Journal.

Home News

More than 160,000 aliens have been naturalized in the army since the declaration of war. The Bureau of Naturalization estimates that 200,000 will be naturalized when all the returns are in.

From $18,000,000 to $23,000,000 will be available in the State of New York this year for highway construction; the work is to begin at once and be pushed for the purpose of reducing serious unemployment.

Homer S. Cummings of Connecticut has been unanimously elected chairman of the Democratic National Committee to succeed Vance E. McCormick, recently resigned. At the same time the committee decided on complete Democratic reorganization for a militant campaign in 1920.

Representative Ben Johnson of Kentucky, chairman of the special House committee which investigated the alleged political activities of the National Securities League, in his report reviewed the testimony heard by the committee, and declared that the league had violated the Corrupt Practice Act. No action was taken on it.

The net profits of the American Locomotive Company for the last six months of 1918 were $8,244,352, an increase of $2,234,343 over the corresponding period of 1917. On the first of the present year unfilled orders amounted to $54,517,373, and since that date orders approximating $4,200,000 have been received from Canada, South Africa and Argentine.

A great tide of emigration out of the United States of aliens, is reported. In the last few months 5500 permits to leave this country have been granted by the emigration officials in Boston and its sub-stations alone. Of the 4000 aliens passed from Boston proper approximately 2500 are Italians. The officials are refusing permits to very few aliens wishing to return to their native country.

The newly formed Inter-Racial Council, in New York, of which Coleman du Pont is chairman, has issued a statement setting forth the objects of the Council and announcing that it indorses a bill to be presented to Congress proposing that persons of foreign birth and native illiterates be educated and asking an appropriation of $12,500,000 for that purpose. Charles E. Hughes and Lindley M. Garrison were among the organizers.

Members of the Legislature of North Dakota, State officials and citizens generally united recently in a celebration of the signature by Governor Lynn J. Frazier of a number of the State's program measures advocated by the organized farmers and city workers of the State and adopted by the Legislature. Among the bills signed was one creating an industrial commission to have charge of the State industries and the operation of the various State institutions; a bill providing for the establishment and operation of the Bank of North Dakota, which is looked upon as the bulwark to strengthen and back the State-owned institutions while getting started; a bill to provide for the establishment and operation of the North Dakota Home Builders' Association, giving the people of the State an opportunity to build and own their homes in the city or on the farm; the bill to create the North Dakota Mill and Elevator Association, and several others apparently as important.

Domestic and Naval

The London Evening News understands that the surrendered U-boats will soon be broken up and sold as scrap iron. Plans for their disposal are now being considered by the British Admiralty.

It is announced that in view of the general shipping situation and the need for repatriating the various expeditionary forces and their dependents, little or no shipping will be available for emigrant traffic before next autumn at the earliest.

The British steamship "Capelcourt," ex "Hermia," 2,050 tons gross, 1,305 net, carries about 3,500 tons d.w., built at Port Glasgow in 1903, steams about 9 knots, and owned by Capel & Co. (Newcastle & Hull), Ltd., Newcastle, has been sold to the Town Line (London), Ltd., for £67,000.

The Cunard Line has issued the following statement of the American troops carried by its steamers to Europe: "Aquitania," 47,867; "Mauretania," 33,277; "Carmania," 28,135; "Caronia," 21,902; "Orduna," 13,448; "Saxonia," 12,319; "Panonia," 4,173; other steamers, 285,198; total, 446,819.

We hear that concrete barges built for New York harbor service have given little satisfaction owing to cracks developing in the concrete each time the barges touch bottom, a not infrequent occurrence in these waters. No more of these barges will be built after present contracts have been carried out, it is understood.

The manipulation of the International Mercantile Marine company's stock by a group if insiders, has become a scandal, says the New York World. This paper states that "Wall street has been hoping that a congressional investigation might bring out some highly interesting facts in connection with the manipulation of the stock."

Of the merchant vessels being built in the United Kingdom at the end of December, 335 of 1,593,283 tons are under the inspection of the surveyor of Lloyd's Register with a view to classification by the Society. Of the steel steamers building in Allied and Neutral countries at the end of December, 527 of 2,230,617 tons—or 60.62 per cent. of the tonnage—are intended for classification with Lloyd's Register.

According to advices from Cleveland the first lake-built concrete ship has been launched at that port by the Liberty Shipbuilding & Transportation Co. The new craft, which was christened "Concrete Car Float No. 1," is one of six car ferry barges building for New York harbor. She is 265 feet long, 38 feet beam and 12 feet deep. She will have three tracks on deck and a capacity for 18 cars. The barges will cost about $80,000 each.

Captain Louis Nicol has replaced Major Pierre Laporte, who left recently for France at the head of the Shipping Department of the French High Commission, 65 Broadway. Up to Jan. 1, 100 per cent. of the shipping from the United States to France was controlled by the French High Commission, either as direct Government shipments or by way of priority privileges. Now the space so controlled amounts to from 66 2-3 per cent to 75 per cent and is gradually decreasing.

News from Abroad

A new political party, "the Independence Association," has recently been formed in Porto Rico to agitate for the complete separation of the island from the control of the United States. The official organ of the party is La Correspondencia.

A Dutch newspaper learns from Essen that a contract has been made to deliver 100,000 tons of German shipbuilding material to Holland, at prices considerably lower than the last war prices, but, nevertheless, higher than the prices now current in Germany.

Much interest has been aroused in France by the announcement that the trial of Raoul Villain, who assassinated Jean-Louis Jaures on August 1, 1914, has been finally set for March 24. At that date Villain will have already been under "preventive detention" for four years and eight months.

The British Shipping Controller has intimated that, in the present circumstances, he can no longer ask for any relaxation of load line rules on certain voyages on the ground of war emergencies. In the circumstances, the Board of Trade have decided to withdraw the concessions which they have already made in the matter.

It is reported from London that despite the terms of the armistice the Germans are giving no help in helping to locate mines in the North Sea. As to when the North Sea will be definitely cleared of the mine peril there are various estimates, but the most optimistic do not name a shorter period than 12 months. The mines are destroyed when found, and there is no attempt to salve them. Their power for evil is very long lived, probably four or five years is the very shortest period in which any could become innocuous, and those laid early in the war are quite good to-day.

The question of the status of the Monroe Doctrine under the provisions of the league of nations is being actively discussed in the press of Brazil. The adoption of an all-inclusive international statute would, according to a considerable body of opinion, render useless the present method of protecting the sovereignty of the South American republics, which implies a special grouping of interests incompatible with the idea and spirit of the league. The contrary view, that the league of nations will serve simply to fortify the authority of the Monroe Doctrine, has had a certain amount of support.

Although it is obviously impossible as yet to secure trustworthy data in regard to book production in Germany during the past year, the statistics for 1917 have recently appeared in a French periodical, Le Droit d'Auteur. They show a total of about 15,000 titles for the year—as against 22,000 in 1916 and 35,000 in 1913. In comparing these figures with those for this country and Great Britain, it should be borne in mind that they include pamphlets and other ephemeral publications which American and British publishers do not count as "books." Nevertheless, considering the conditions that have prevailed, the showing is a most remarkable one. It is interesting to note that of the 278 foreign works translated and published in Germany during 1917, sixty-one are of English and fifty-five of French origin.

With the Wits

An Invitation

We invite deposits from every one—rich, poor, old and young. We recognize no classes, but treat large and small depositors with the same courtesy and consideration.

HUMBOLDT SAVINGS BANK

733 MARKET STREET, Near Fourth
SAN FRANCISCO

Taylor's Nautical Academy

Established 1888

Consular Building, Corner Washington and Battery Streets, Opposite New Custom House, San Francisco, Cal.

THIS OLD AND NOTEWORTHY SCHOOL is under the direct and personal supervision of CAPTAIN HENRY TAYLOR and equipped with all modern appliances to illustrate and teach any branch of Navigation.

The class of teachers of Navigation in the past have been those having simply a knowledge of Navigation, and Navigation only. Conditions have changed, and the American seamen demand a man as a teacher with higher attainments than one who has only the limited ability of a seaman. The Principal of this School, keeping this always in view, studied several years the Maritime Law, and is now, in addition to being a thorough teacher of Navigation and its kindred subjects, a regularly admitted Member of the Bar.

There is no standard of education required of a pupil entering the School, for no matter how ignorant the seaman may be, even in the rudiments of common education, Captain Henry Taylor will teach and raise him from the depths of ignorance to the height of the average well-informed man, and in a comparatively short interval of time.

THE SEAMEN'S JOURNAL

FOR THE SEAFARING PEOPLE OF THE WORLD.
Official Paper of the International Seamen's Union of America.

A Journal of Seamen, by Seamen, for Seamen. Our Aim: The Brotherhood of the Sea. Our Motto: Justice by Organization.

VOL. XXXII, No. 30. SAN FRANCISCO, WEDNESDAY, APRIL 2, 1919. Whole No. 2532.

VALIDITY OF ADVANCE WAGES

Supreme Court Asked to Reconsider Decision Adverse to Seamen

The Supreme Court of the United States by a majority of "One" recently decided that Section 10 of the Seamen's Act does not forbid the payment of advance to seamen in foreign ports, on vessels bound for ports of the United States.

Herewith is the petition and argument for a rehearing of that case, prepared at the instance of the International Seamen's Union of America as per recommendation of the recent convention at Galveston.

The two vessels involved are the "Rhine" and the "Windrush," both of which are sailing ships.

To the Honorable the Chief Justice and the Associate Justices of the Supreme Court of the United States:

The petition of Paul Neilson and eight others against the sailing ship "Rhine," and of John Hardy and eight others against the barkentine "Windrush," with respect, represents:

Your petitioners believe that there is error in the majority opinion of this Court, in its construction of Section 10 of the Seamen's Act, in its applicability to American vessels while in foreign ports.

This petition is based, principaliy, upon the fact that the majority opinion of this Court, as expressed by Mr. Justice Day, is premised upon an assumed state of facts which did not exist. The statement of facts, by the reasoning of the opinion, appears to have been the major premise from which the deductions of this Court were made.

It is this, briefly: The Court assumed, as a matter of fact, as the District and Circuit Court of Appeals below had also assumed, that conditions in Buenos Ayres were such that a crew could not be obtained by the master of an American vessel unless he paid advance wages. The language of the decision of the majority opinion of this Court indicates that such erroneous assumption of fact was made, for Mr. Justice Day, in writing said opinion, stated as follows:

"It is stipulated that the shipping of seamen on sailing vessels at Buenos Ayres is controlled by certain shipping masters, to one of whom the libelants, in accordance with the usual custom and as a means of securing employment, signed a receipt or advance note for one month's wages."

Examination of the record shows that eight or nine witnesses in the Hardy case could have been hired by the master direct without the agency of the shipping master, but that, on the contrary, the master compelled them to go to the shipping master (the "Rhine" belonged to the same company).

It was stipulated in the record that the master of the ship, if he testified, would claim that he got his men by advance notes, because he could get them in no other way. But the weight of the testimony is against him on this point (see p. 11 hereof Testimony of Seamen). As a matter of fact, those familiar with conditions in foreign ports know very well that if a foreign consulate or any reputable ship master desires to obtain a crew without the agency of a crimp he can do so.

It was not anticipated at the time of briefing this case, or upon the argument, that this question of fact could possibly affect the judgment of the Court as to intention of the statute, the terms of which were definite. But since it has apparently affected the judgment of this Court, it seems necessary now that the erroneous assumption of fact upon which the Court rendered its decision should be called to its attention, especially in view of the decision of this Court in the case of Wilder v. Inter-Island Navigation Co., decided November 30, 1908, opinion by Mr. Justice Day, reported in 211 U. S., 239, enforcing literally and effectively a statute to protect wages of seamen from attachment while in a foreign jurisdiction. There was no dissenting opinion.

The facts in that case were as follows: Tullet, a seaman, was master of the "Keauhou"; execution was issued against his wages in the sum of $65 for some obligation incurred in Hawaii; the company filed an answer stating that Tullet was an American seaman in their employ and set up Section 4536 of the Revised Statutes of the United States, which is set forth in the opinion (p. 243):

"No wages due or accruing to any seaman or apprentice shall be valid in law, notwithstanding any previous sale or assignment of such wages, or of any attachment, incumbrance, or arrestment thereon; and no assignment or sale of such wages, or of salvage made prior to the accruing thereof, shall bind the party making the same, and no power of attorney or authority for the receipt of any such wages shall be irrevocable."

Mr. Justice Day, in his decision, reviewed the authorities fully, and reached the conclusion that, in spite of the fact that in Hawaii there was a local statute authorizing attachment (Chap. 135, Laws of 1905, Sec. 2118; see bottom p. 241), as follows:

"It shall be lawful for a judge or any court upon the ex parte application of such judgment creditor either before or after such oral examination and upon affidavit by the judgment creditor or his attorney stating that judgment has been recovered and that it is still unsatisfied, and to what amount, and that any other person is indebted to the judgment debtor and is within the jurisdiction, to order that all debts owing or accruing from such third person (hereinafter called the 'garnishee') to the judgment debtor, shall be attached to answer the judgment debt, and by the same or any subsequent order it may be ordered that the garnishee shall appear before the judge to show cause why he should not pay the judgment creditor the debt due from him to the judgment debtor or so much thereof as may be sufficient to satisfy the judgment debt; provided that the judge may in his discretion, refuse to interfere when from the smallness of the amount to be recovered, or of the debt sought to be attached or otherwise, the remedy sought would be worthless or vexatious."

Nevertheless, the statute of the United States must be given full and complete effect as to seamen on American vessels, citing the case of Patterson v. Bark Eudora (190 U. S., 169, 175). And, therefore, this Court gave full and complete enforcement to a statute of the United States, although it was in contradiction to the terms of a local statute in Hawaii.

In the case at bar this Court, in its majority opinion, stated (next to last paragraph):

"That American vessels might be controlled by Congressional legislation as to contracts made in foreign ports may, for the present purposes at least, be conceded."

In the Wilder case (supra), Mr. Justice Day stated (p. 248):

"Section 4547 provides for process against a vessel in case a seaman's wages are not paid, or the master does not show that the same are otherwise 'satisfied or forfeited,' and all the seamen having like cause or complaint may be joined as complainants in a single action.

"We think that these provisions, read in connection with Section 4536, necessitate the conclusion that it was intended not only to prevent the seaman from disposing of his wages by assignments or otherwise, but to preclude the right to compel a forced assignment, by garnishee or other similar process, which would interfere with the remedy in admiralty for the recovery of his wages by condemnation of the ship. These provisions would be defeated if the seaman's wages, to be recovered at the end of the voyage, could be at once seized by an execution or attachment after judgment in an action at law. The evident purpose of the Federal statutes, that the seaman shall have his remedy in admiralty, would be defeated, and the seaman, in many cases, be turned ashore with nothing in his pocket, because of judgments seizing his wages, rendered, it may be, upon improvident contracts, from which it was the design and very purpose of the admiralty law to afford him protection."

In the case at bar, the seamen earned about $48 in working the ship from Buenos Ayres to New York. They were paid $48, minus $30 paid to a crimp in Buenos Ayres, minus certain slops advanced to them by the master of the ship after they were on board, and arrived in New York with anywhere from $10 to $15 apiece.

The attention of this Court was not directed upon the argument, or in the brief filed by petitioners, to this Statute 4536, nor to the decision of this Court in the Wilder case (supra). But it would seem that the paper executed by the seamen in Buenos Ayres was an assignment of wages, which would be covered by this section as well as the section relating to advance wage, which is known as Section 10-A of the Seamen's Act.

The attention of the Court, however, was directed to Section 4517 of the United States Revised Statutes (see p. 28 of the Petitioners' Brief, October Term of this Court, No. 936-

937), which provides that seamen shipped aboard before Consul or Agent on American vessels shall be engaged in the same manner as prescribed by Section 4511 for shipment of seamen in American ports before United States Shipping Commissioner. In other words, articles of agreement shall be signed, etc.

This and Section 8371 of the Revised Statutes, relating to discharge of seamen, from which I quote the following:

"According to the general principles or usages of the maritime law as recognized in the United Stares, such officer shall discharge said seaman, and require from the master of said vessel, before such a charge shall be made, the payment of the seamen's wages which may then be due him," probably are responsible for the language of the Court above referred to, to the effect that Congress may control contracts of seamen on American vessels while in foreign ports in the absence of conflicting local mandatory statutes.

The stipulation which has given rise to the misunderstanding of the real facts in this case is found at page 6 of the record in the case of Hardy v. Windrush, third paragraph, which reads as follows: (It is to be noted that in the index, page 1, this stipulation of what the master would testify to is labeled "stipulation of facts.")

"That the master would testify shipping of seamen for sailing vessels at Buenos Ayres is controlled by shipping masters, among whom was the aforesaid Tommy Moore; that the mastr of the Barkentine 'Windrush,' if called, would testify that it would have been impossible to advance," etc.

The facts of the matter are as follows: The attorneys for the ship asked counsel for seamen to stipulate as to what the captain would testify in order to save expense, delay and to shorten the record. Believing the master would so testify in an attempt to excuse or justify his participation in the evil practice, counsel for seamen signed the stipulation, which was prepared by the attorneys for the ship.

That such facts were not assumed by the petitioners or their attorney to be the true facts in the case is indicated by the testimony of practically all of the crew, made under oath, to the effect that they applied to the master or the officers of the ship for employment before going anywhere else; that they were sent by said master or officer to the crimp. The only conclusion to be drawn from these facts is that the master and officers of the ship could hire the men if they wanted to, without the intervention of the crimp, but for some reason, not appearing in the record, the master and officers preferred to hire their crew through the crimp. The suggestion that the master might have been benefited in some way, or had some personal interest, in obtaining his crew through the crimp, who charged the seamen $25 apiece, is, of course, an obvious one.

This same error of fact, apparently, was committed by the trial court. In the first paragraph it says:

"It is stipulated that the shipping of seamen at Buenos Ayres is controlled by certain shipping masters, to one of whom libelants, in accordance with the usual custom and as a means of securing employment, signed a receipt or advance note for one month's wages" (p. 40 of Record.

The erroneous assumption of facts taken by this Court is quite natural, in view of the repetition found in the opinion of Judge Charles M. Hough, who wrote the majority opinion of the Circuit Court of Appeals (Record, p. 45).

The facts in the case are made up of a stipulation as to what the master would testify, covering two pages of the record (pp. 6-7), plus the sworn testimony of John Hardy (p. 8), John Broedker (p. 15), Paul Udson (p. 20), Arthur Goldstein (p. 24) and Texas O'Brien (p. 28) and Thomas O'Keeffe (p. 30), all in the Hardy case, and Fred Neilson (p. 32) and William Robur (p. 36) in the Windrush case.

The instant case, which was apparently decided on all fours with the decision of Judge Brown in The State of Maine, 22 Fed., 734 (1884), was overruled by Judge Veeder. In that case the Court found that following facts, as indicated by the opinion (first paragraph):

"Before doing so the captain in vain endeavored to procure a crew without making any advances of wages or paying any sailors' bills there. He was subsequently able to obtain a crew only upon providing for the payment of certain bills for board that were claimed to be due from the men there."

It is a noteworthy fact that the testimony in the instant case was taken prior to the date of the stipulation, to wit, in September and November, 1916. The stipulation as to what the master would testify to, erroneously called a stipulation of the facts in the record, was signed on March 19, 1917.

If counsel is not mistaken, this Court would perhaps have rendered a different decision as to the intention of Congress to effect advances of this sort on American ships, if it had believed that seamen could be obtained in Buenos Ayres for such ships without any disadvantage to them, without any delay, and without any extra expense.

It should be borne in mind that the shipowner is not benefited by this evil system at all. The sailor is the only one injured and harmed, because he does not get his wages. The crimp, and possibly the master, are the only ones to derive financial benefit.

Counsel respectfully begs to call the attention of this Court to the language of Justice Brewer in the case of Patterson v. Bark Eudora (190 U. S., 169, at p. 175):

"The story of the wrongs done to sailors in the larger ports, not merely of this nation but of the world, is an oft-told tale, and many have been the efforts to protect them against such wrongs. One of the most common means of doing these wrongs is the advancement of wages. Bad men lure them into haunts of vice, advance a little money to continue their dissipation, and, having thus acquired a partial control and by liquor dulled their faculties, place them on board the vessel just ready to sail and most ready to return the advances. When once on shipboard and the ship at sea the sailor is powerless and no relief is availing. It was in order to stop this evil, to protect the sailor, and not to restrict him of his liberty, that this statute was passed. And while in some cases it may operate harshly, no one can doubt that the best interests of seamen as a class are preserved by such legislation."

The question of fact is: Was it necessary that the men be engaged through the crimp at Buenos Ayres, as it was admitted that the master would testify to or claim? The point was particularly raised on the cross-examination of the witnesses, and it is shown from the testimony of the libelants that they did actually apply to the master for a job, and that he compelled them to go to the crimp in order that they might, through the crimp, be placed on the ship.

Testimony of the Seamen.

Hardy, one of the libelants, in answer to questions referring to the crimp (p. 14, fol. 22, of Record) said:

"Q. I suppose they control all the shipping in Buenos Ayres?

"A. Almost all. They don't control English ships.

"Q. Where do they get their English sailors?

"A. English Sailors' Home."

The testimony of John Broedker (p. 17, fol. 25) indicates that he never was in Moore's house at all:

"Q. Did you ever see him at Moore's house?

"A. I didn't go there."

(P. 18, fol. 26:)

"I was going on the ship, on the 'Windrush,' and we couldn't get a job on the ship; somebody told me I must go to Tommy Moore."

On page 17, folio 24, John Broedker testifies that he received an advance of $25:

"Q. Where did you sign that paper?

"A. At the Consul.

"Q. You signed the advance in the Consul's office?

"A. Yes."

Paul Udson, who paid $25 advance, testified (p. 21, fol. 30):

"Q. Why didn't you sign the articles?

"A. I was on board and asked the captain for a job and he said, 'All right, start to-morrow.' I took my clothes in the morning and the chief mate said, 'You can't turn to.' The captain wanted to see me, then I went to the captain. He said, 'You have to go to Tommy Moore.' I said, 'What about him?' He said, 'He ships for the company.'

"Q. Did you go to see Tommy Moore?

"A. Yes.

"Q. The same day?

"A. Yes.

"Q. What day did you go aboard the ship?

"A. Night of 8th of May.

"Q. What date did you go to see Tommy Moore?

"A. On the 9th.

"Q. What did you do at Tommy Moore's house?

"A. I said to him, 'The captain sent me here.' He said, 'All right, you belong to the crew then.'"

The testimony of Arthur Goldstein (p. 25, fol. 35) indicates still further the fact that the captain was not making any effort to get a crew without paying advances, but, on the other hand, was sharing in the profits of the iniquitous business:

"Q. How did you get it?

"A. I got on board the ship by the mate: captain wasn't on board when I came there and mate told me cook was on the drunk and told me to try to get the job if I wanted it. I started to work. I don't know how long, between six and eight weeks; close on to two months."

* * * * * *

"Q. Did you sleep on board?

"A. Yes. Instead of captain paying me every Saturday night, this boarding master came on board and paid me and took part of my wages out every week. Whatever I owed him I had to pay ten or fifteen times over again.

"Q. Did you see the captain pay your wages to him?

"A. No, but I think the captain got his share out of it every week."

(P. 26, fol. 36):

"Q. Did you owe Tommy Moore anything?

"A. Yes, but that was paid in one week.

"Q. How much did you owe him?

"A. He never made up a bill; he didn't tell me I owed him anything; he simply took money."

We next come to the testimony of Texas O'Brien, a seaman, who was in Buenos Ayres between the 2nd and 15th days of May, 1916; and in testifying as to conditions in the port there says (p. 29, fol. 41):

"Q. Why was it that you were signed on at only 25 cents?

"A. For the simple reason that there were so many people applying for jobs that they couldn't accommodate them. I came quick and ask for a job and they put me on."

* * * * * * *

"Q. Did you ever hear of Tommy Moore in Buenos Ayres?

"A. No, sir.

"Q. Did you go to any shipping agent to get the job?

"A. No.

"Q. Whom did you apply to?

"A. American Consul.

"Q. He sent you to the ship 'Newton'?

"A. Yes, he told me to go to the S. S. 'Newton.'"

Then comes the testimony of Thomas O'Keeffe another American seaman, who says (p. 30, fol. 42) he was in Buenos Ayres on September 9, 1916. He testifies (p. 31, fol. 43):

"Q. Did you ever hear of Tommy Moiore?

"A. Yes, I knew the old fellow and I know the young one.

"Q. Who are they?

"A. Shipping masters in Buenos Ayres. I know those people well; they shipped me out once about twenty years ago. Old Tommy Moore is dead now.

"Q. Who runs the business?

"A. His son and another fellow by the name of Bergenson."

And on page 31, folio 42, he states:

"Q. How did you get the job on the 'Iowan'?

"A. Through the American Consul.

"Q. Did you pay any advance?

"A. No.

"Q. Did you pay any advance to anybody?

"A. No.

"Q. In what capacity did you join?

"A. A. B.

"Q. How much a month?

"A. $40.00.

"Q. Were your wages paid in full?

"A. Yes."

The testimony of Fred Nielson (p. 33, fols. 45-46) follows:

"Q. Didn't you sign a note for Tommy Moore?

"A. I signed a blank piece of paper. Just as I got in there, they had some kind of book there and nothing on it at all and he said to sign so I signed. It was not an advance note or anything like that. I don't know what it was.

"Q. Where did you sign that?

"A. In Tommy Moore's house.

"Q. Had you been sleeping in his house?

"A. No.

"Q. Get any meals there?

"A. No."

He continues under cross-examination (p. 35, fol. 48):

"Q. Did you at any time ask anyone else to get you a job on the 'Windrush'?

"A. Yes. I asked sailor who was on board before and he shipped again that trip and I was going to skipper and he said it was no use of going to skipper, because they send them all to the boarding house."

And the testimony of William Robur (p. 37, fol. 51) is to the same effect:

"Q. Did you sign for an advance?

"A. I went on board again and the chief mate told me that captain went away and I met captain on the street and I asked him again for a job and he said, 'Why didn't you go to Tommy Moore's house,' and I said, 'I haven't got anything to do with Tommy Moore, I don't know where he lives.' Then he said, 'It is better that you go up there to-morrow morning and ask him if you can come on this ship.'

"Q. What did you say?

"A. 'All right.'

"Q. Did you go up there?

"A. Yes.

"Q. When?

"A. The same evening.

"Q. Did you see Tommy Moore?

"A. I didn't see Tommy Moore; I saw another fellow there.

"Q. Did you ever see him again?

"A. The morning I was there.

"Q. Did you sign any paper?

"A. When I was there for the first time he asked me if I wanted to go on the 'Windrush,' and I said, 'Yes.' He said, 'Well, be here to-morrow morning about 8 o'clock,' and I said, 'All right.' The next morning I came and he said, 'Do you want to go on the "Windrush"?' and I said 'Yes,' and he said, 'We will go to Consul about 11 o'clock,' and then some other fellows came and he called us in altogether and he said, 'Here you have to sign.'

"Q. Did you sign at the same time this man Neilson signed?

"A. Yes."

These facts were called to the attention of the Circuit Court of Appeals when the case was argued before it, and the attention of the Pre-

(Continued on Page 11.)

WEEKLY NEWS LETTER

Contributed by American Federation of Labor

Profit-Sharing Plan Based on Deception.

"There is as much deception in the publicity campaign of profit-sharing plans for workers in big industrial plants as there was in German propaganda," says the Union Leader, official paper of the organized street car employes of Chicago.

"The press bureaus of bolsheviki employers are grinding this bunk out by the yard and the daily papers are feeding it to the gullible to swallow," says the Union Leader, which shows that these profit-sharing schemes are installed by anti-union employers, and that it is necessary for workers to remain in service from five to 10 years before they can secure profits that range from $75 to $150 a year.

"How does this increase compare with the wage increases secured through the trade unions?" is asked. "The latest effort of the Chicago street car men, through their union, brought an increase of 9 cents an hour. On a basis of 300 working days a year, which is very conservative for street car men, this wage increase amounts to $270 annually for each employe. And the increase was general and not to a favored few, and the employes maintained their independence. It was but one movement, the employes retaining their organization to move again when it becomes necessary.

"So-called profit-sharing, to use a stereotyped expression, is a delusion and a snare. It does not share profits with the employers. It keeps the workers divided and prevents them from forcing a more equal share of the revenue from the business through the power of organization.

"It is little wonder that the power of the daily newspapers is waning when they devote space to the boosting of methods to rob the workers and keep them helpless, at the mercy of the autocrats of industry.

"The people are thinking. They are no longer carried away by dishonest news stories and editorial hogwash. Some day, not far distant, they will center their fire on the subsidized press, and when that day comes our commercialized journalists will find the world about as small and desolate as it now appears to the Kaiser."

Liability of Unions Shown to be Unequal.

There is no justice in the claim that because officers of a corporation are liable for the actions of one associate, the same should be true of labor unions, said John H. Walker, president of the Illinois Federation of Labor, replying to the editor of an employer's paper.

As far as is humanly possible, said the trade unionist, members of corporations protect themselves in the selection of associates. They have every facility for inquiring into the connection of prospective officials.

In the case of trade unions employers select who will work for them even where they have joint agreements and the workers' organizations must accept who the employer hires, so that "there is absolutely no comparison between the methods of selection and the opportunity to protect themselves on the part of the members and officers of corporations and the members and officers of trade unions."

"I am rather under the impression that if it was the members of the trade unions who selected the members and officers of the corporation, that then the members and officers of that corporation would not be as ready to assume responsibility for each other's acts as they are at the present time," said President Walker.

"And in addition to this, we know that the large employers generally have hired detectives and spies in these unions for the purpose of betraying, weakening and wrecking them, if possible.

"The trade union influences its members, as far as it can, to live up to its contracts, and usually, where a member violates a contract, they penalize and discipline him, and go as far as men could reasonably expect them to go in repairing any injury that was done, and I believe it will be found that the average trade union is just about as responsible as are corporations.

"The poor devil who is uninformed or just normal in disposition is here and must make a living. Do you want the workers to assume all responsibility for him, or do you want him to be left alone to be used unjustly to his own injury and to the injury of the other workers?

"They cannot leave him alone; they must protect him, and outside of the selfish aspect of it, as an act of humanity, they want to and should help him. The trade unions dare not assume all responsibility for him. They dare not leave him alone and helpless.

"I believe that the employers should not be allowed to take advantage of the uninformed or unfortunate, and that they, too, should share some of the responsibility for them, and do their share to assist them."

Illiteracy a Menace.

School Life, official organ of the United States Bureau of Education, appeals to the Nation and to the various States to act jointly in a campaign to remove illiteracy. It is estimated that there are 8,500,000 persons in the United States over 10 years of age who can not read a newspaper, bill board, sign, booklet or letter in the English language.

"This problem is national," says School Life. "The South leads in illiterates. The North leads in non-English-speaking. Seventeen and one-half per cent. of the people of the east south central States are illiterate, but 15.8 per cent. of the people in Passaic, N. J., can not read, speak or write English. Sixteen per cent. of the people of the south Atlantic States are illiterate, and so are 13.2 per cent. of the people of Lawrence and Fall River, Mass."

The "labor leader" who wobbles under abuse and misconstruction from friend or foe can generally find the cause of his instability in the fact that his boots are too big for him.

World's Workers

A Brussels message says that Mr. Robert Smillie and Mr. Thomas Aston, delegates of the Miners Federation of Great Britain, have made a gift of 250,000 francs in the name of their organization to the organization of Belgian miners.

The Department of Labor reports that strikes are being called in England for a 30-hour week. Lord Leverhulme, a soap manufacturer, has introduced a six-hour day in his own plants. No diminution of output is reported.

The unrest of workers in numerous countries has now affected India, where textile workers are striking for wage increases. Mill owners offered a slight advance but this has been refused. The strike is spreading to non-textile trades.

The Russian People's Commissariat for Education has opened a university for workers at Petrograd. In the first term the following subjects will be taught: General History, Literature, History of Russia and Foreign Art, History of the Revolutionary Movement, Political Economy, Logic, Psychology, Philosophy, Biology, Fundamentals of Mathematics, and Modern Languages. Special lectures and exhibitions have been opened for the deaf and dumb.

Things are moving in Japan. The cables tell of a great agitation that is sweeping the country to compel the Government to liberalize the franchise. The "Times" states that the movement has reached "significant and undreamt-of strength" and is the result of "Bolshevik example and propaganda." That there is an awakening among the Japanese workers is plain to anyone who has studied the news regarding conditions in the land of the rising sun that has been coming through in recent times.

Robert Williams, general secretary of the Transport Workers' Federation, said in London, that failure to grant the miners' demands will result in a general strike of the "triple alliance," which would paralyze British industries and probably force a change in the Government. The "triple alliance" is the common term for the transport workers, railway men, and miners. Williams's organization alone numbers close to 300,000. He is not optimistic regarding the result of the inquiry being conducted into the mining situation by the Government, and declared that nationalization of all natural monopolies, with the workers participating in the management, is the only solution to the present labor unrest.

How the Allied intervention is creating in Russia a "united Socialist front" is best seen from the following manifesto recently issued by the Socialist Revolutionary party: "The struggle of the Social Revolutionaries against Bolshevism was directed against a power which was in direct contact with the German oppressors of Russian democracy, but at present, after the defeat of Germany and in view of the fact that the intervention in Russia by the victorious powers is assuming more and more the character of assistance given by the bourgeoisie, it has became necessary for us to abandon the struggle against the Bolsheviki." The Social Revolutionaries were the strongest party in the constituent assembly and before the Bolshevist revolution had the largest following among the peasants.

GOVERNMENT

INFORMATION WANTED.

One B. Kajakcorchi, oiler, of Russian nativity and member of Seamen's Union, was injured on the steamer "Paraiso," of Swayne & Hoyt, San Francisco. The vessel was one day out of New York and on the second watch the strap on the go ahead starboard eccentric broke, with the result that Kajakcorchi had his left hand smashed all to pieces. He has been in the hospital ever since and will be disabled for many months. He has a permanent disability. Patrick Ennis and Andrew McCann, who know about the previous condition of this strap, will oblige me by communicating with me or the nearest Union delegate. This strap, we have reason to believe, was worn out and defective, as it had been heating up continuously for nearly three weeks prior to the accident. Silas B. Axtell, Esq., 1 Broadway, New York City. 8-21-18

The following men: August Rosso, oiler; Robert Anser, oiler, and V. Florio, wiper, who were employed on the S. S. "Comet," on or about November 22nd, 1917, when John Olsen was injured through the leaking of a gland which caused his hand to get tangled up in the motor, whereby he sustained severe and permanent injuries, will please communicate with me without delay. They may furnish valuable evidence to assist Olsen in his suit against the Standard Transportation Company. His injuries are very serious. S. B. Axtell, 1 Broadway, New York City.

Members of the crew of the S. S. "Argonaut," who assisted in the salvage services to the S. S. "Jason," at the time she was in distress off the coast of Florida, on or about January 1st, 1918, will kindly call or communicate with the undersigned who is representing most of the officers and crew of the S. S. "Argonaut." Silas B. Axtell, One Broadway, New York City.

Frank J. Phillips, a member of the Marine Firemen's, Oilers' and Watertenders' Union of the Atlantic and Gulf, last heard of in San Francisco, Cal., April, 1916. Anyone knowing his whereabouts will please notify Mrs. Frank J. Phillips, P. O. Box 521, San Pedro, Cal. 2-19-19

When making purchases from our advertisers, always mention The Seamen's Journal.

Pacific Coast Marine.

The Gulf Mail Steamship Company has chartered the steamers Joan of Arc, Georgina Rolph and Annette Rolph, and they have been placed on the berth for voyages to the lower and west coasts.

J. H. Dieckmann Jr., has filed libel suit in the United States District Court at San Francisco against the motorship "City of Portland" for $29,617 damages. Dieckmann alleges the damaging of a consignment of teakwood, due to improper stowing.

Working back into port with a jury rudder, the freighter "Javary" of the Garland line has arrived at Seattle for repairs. Her rudder was smashed in a storm eight days after she passed out of Cape Flattery, and she was fifteen days in getting back under a jury rudder.

The steamship "Kishinev" of the Russian Volunteer Fleet Corporation is now on the Pacific Coast from New York on the way to the Orient. She will be followed by the Russian steamships "Toula" and "Nijni Novgorod." Swayne & Hoyt are acting as agents for the vessels here. They will be bunkered by the King Coal Company. All three of the freighters were in this port a year ago. The Volunteer Fleet Corporation was started some years ago by the Russian Government.

The American Manganese Manufacturing Company, owner of the steamer "Guanacaste," filed a $10,000 libel suit in the United States District Court at San Francisco against the steamer "Northland." The complaint says that on February 16 of this year the steamer "Northland," through the negligence of its officers, collided with the "Guanacaste" while the latter was in the harbor of San Jose, Guatemala. It will take $10,000, according to the complaint, to repair the damage done to the "Guanacaste."

The California Sea Products Company has sold the tug "Hercules" to Walter Scammell, local shipping man, who will use her in independent towing on the bay and in connection with the movement of his fleet in and out of port. The "Hercules" has been engaged in whaling off the California coast, and last week landed a 50-ton whale at the Products Company's landing at Moss Point. A second whale of similar size was brought in by the "Hercules" Monday night. The vessel will be ready for harbor work in thirty days.

Reeling off a speed of 11.4 knots, the new steel steamer "Glendoyle," built by the Albina Engine and Machine Works and destined for operation by the American Hawaiian Steamship Company, passed through seven hours of official trial, and was delivered to the Pacific Steamship Company at Portland, during the week. The new steel steamer "West Hardaway," also a Portland product, will be turned over to the American Hawaiian Company. The vessels will be delivered to Puget Sound and will then proceed to Honolulu to load sugar for the Atlantic Coast.

The steam whalers "Westport," "Aberdeen" and "Moran" have arrived at Hoquiam (Wash.), from the Pacific Whaling Company's station at Bay City for their annual overhauling. The work will require about two weeks, and the fleet is expected to commence hunting whales about April 15. The area covered by these vessels extends about thirty miles out to sea and seventy-five miles along the coast on each side of Grays Harbor. The fleet brought 189 whales to the station last season, eighty tons of the most choice meat being marketed as fresh whale "beef." The demand was such that the product will probably be increased this season. The company's station at Koyukut, Vancouver island, last year packed 30,000 cases of this "beef," which also found ready sale.

Three steel vessels dipped for the first time into salt water on Mar. 30, when the 9400-ton freighter "Cotati" and the 10,000-ton tanker "Imlay" were launched at the Moore Shipbuilding Company's yard at Oakland (Cal.), and the 9000-ton freighter "Consumet" left the ways at the Pacific Coast Shipbuilding Company's plant at Bay Point. All the launchings were private. The "Cotati" was launched at noon, sponsored by Mrs. George T. Page; the "Consumet" at 1 p. m., and the "Imlay" at midnight. Mrs. George A. Oppenheimer sponsored the latter vessel. The "Imlay" is the first of twelve of the big oil-carrying ships to be built by the Moore Company, and the "Consumet" is the second ship to be launched at the Bay Point yard. Immediately upon launching the ships, new keels were laid on the ways.

With the incorporation of the San Francisco Open Drydock Company, a group of San Francisco capitalists is making preparations for the construction of a dock on the tide lands between the army transport docks and the eastern end of the Exposition site. The company is incorporated for $2,000,000, with the following as chief stockholders: W. H. Kearney, Jason W. Machado, F. G. Parker, Thomas H. Kearney, A. T. Briggs, Peter A. Breen, and I. L. Steinman. The company's plans contemplate operation of a drydock, not only for the benefit of shipowners, but also to permit shipping men to install their own machine shop at the drydock during repair work. The incorporation papers also call for the building of wharves, basins, power lines, rail and trolley facilities and housing for machinery while ships are being overhauled.

The passing of the romantic days of fleet-sailing pilot-boats has been completed in the sale of the "America" by the San Francisco Bar Pilot Association to Olson & Co. It is now several years since motors were put in the other pilot-boats. The new owners of the "America" will use her as a codfisher in northern waters. The "America" has a wonderful history, and has been sailing in and out of the harbor with pilots since 1888. The craft was built at Benicia and was long one of the fastest sailers hereabouts. In many a contest she defeated all rivals of her size. She vanquished sailing craft in races around the Farallon Islands. To take the place of the old-time pilot-boat, the pilots intend to have a large sea-going motor-boat constructed at one of the local yards. The "America" is of seventy-four tons net, eighty-one feet in length, with twenty-four-foot beam, and nine feet nine inches depth of hold.

The three 7,500-ton steel steamships "Quinticas," "Remus," and "Cascade," assigned during the week by the Shipping Board to H. F. Ostrander and Company, and Pacific Steamship Company and Struthers and Dixon, will all load in April for Siberia. Four steel steamships have been assigned to the flour trade from Puget Sound to the Atlantic Coast. They are the steamships "Edgehill" and "Edgemont," both 9,600 tonners; the "Western Knight," 8,900 tons, and the "Jacona," built by the Todd plant in Tacoma. The "Jacona" will begin loading the first of April, with W. C. Dawson and Company as managers and operators. The "Edgehill" will go on berth April 4, with Frank Waterhouse and Company as managers and operators. The "Western Knight" will begin loading April 10, with the Grace firm as operators and managers. The 9,600-ton "Eldena" also will be assigned for a voyage from Puget sound to the Atlantic coast with flour.

Determined to secure a square deal for the shipping on the Pacific and to promote the interests of American-operated vessels on this coast, all of the shipowners and operators of San Francisco and other Pacific Coast ports are preparing to organize an association that will include in its membership every interest concerned. During the week each local steamship management received a letter from W. F. Sullivan, secretary of the Shipowners' Association of the Pacific Coast, announcing a meeting to be held in the Merchants Exchange building on the afternoon of April 7. The meeting will discuss the advisability of enlarging the present association, which now includes only the owners and operators of the vessels of the steam schooner class, and take into membership all types and every owner and operator of water-carriers, both cargo and freight, operating out of Pacific ports under the American flag, and also water-carriers operating on the sounds, bays, rivers and harbors of the Pacific Coast.

In anticipation of a vast increase in the steamship business between this port and the Orient, Australasia, Mexico, Central America and west coast ports of South America, San Francisco shipping concerns, exporters and importers are arranging for the extension of branch offices at hundreds of different points in order to provide adequately for the increase. Among the concerns which are actively engaged in establishing their offshore agencies are the following: The Maritime Navigation Company, establishing an agency at Sydney, Australia, with others to follow at Melbourne, Dunedin and Wellington. Transoceanic Company to extend connections to various parts of the Orient. The organization of a permanent agency at Manila by the Matson Navigation Company. The establishment of the Java-China line between San Francisco and Java, to be managed here by J. A. Doyer, formerly of Hongkong. The organization of a new Russian line with five steamers to inaugurate the fleet between San Francisco and Vladivostok. Establishment of agencies in the Orient by the Pacific Steamship Company and the inauguration of a freight service by Shipping Board vessels and the installation of the liner "Senator" between the Pacific Coast and the Orient. The organization of the Asano Boyeki Kaisha by the Sichiro Asano Company and W. R. Grace & Co to promote Pacific trade. The announcement of a permanent line of Dutch freighters between San Francisco and the Dutch East Indies. Extension of a direct line of steamers to the west coast of South America by the Gulf Mail Steamship Company and the establishment of the company's agencies at scores of ports of Mexico, Central America and South America.

F. R. WALL, who was for many years an officer in the United States Navy, is now practicing marine law in San Francisco. He gives claims of all seafarers careful attention. 324 Merchants Exchange Bldg., 3rd Floor, California St., nr. Montgomery. Phone, Sutter 5807 (Adv.)

The Seamen's Journal
Published weekly at San Francisco
BY THE
SAILORS' UNION OF THE PACIFIC
Established in 1887

PAUL SCHARRENBERG.....Editor
S. A. SILVER.....Business Manager

TERMS IN ADVANCE.
One year, by mail - $2.00 | Six months - - - $1.00
Advertising Rates on Application.
Business and Editorial Office, Maritime Hall Building, 59 Clay Street, San Francisco. Telephone Kearny 2228.

Changes in advertisements must be in by Saturday noon of each week.

To insure a prompt reply, correspondents should address all communications of a business nature to the Business Manager.

Entered at the San Francisco Postoffice as second-class matter. Acceptance for mailing at special rate of postage provided for in Section 1103, Act of October 3, 1917, authorized September 7, 1918.

NOTICE TO CORRESPONDENTS.
Communications from seafaring readers will be published in the JOURNAL, provided they are of general interest, brief, legible, written on one side only of the paper, and accompanied by the writer's name and address. The JOURNAL is not responsible for the expressions of correspondents, nor for the return of manuscript.

WEDNESDAY, APRIL 2, 1919.

"TO BID FREELY!"

The attitude of America's reactionary shipping interests toward the future manning of the American Merchant Marine is concretely set forth in the following excerpt from an unsigned article appearing in a recent issue of the San Francisco Daily Journal of Commerce.

According to this authority there are three principal obstacles to the successful operation of an American Merchant Marine.

The first is the higher cost of operation, the second is the higher cost of ship construction in the United States, and the third is "the navigation laws." "Briefly," the Journal of Commerce writer says, "the laws that operate to restrict free competition should be repealed."

We quote him on this point:

> The first step urged is the repeal or modification of the Seamen's law, the most important feature of which is the requirement that three-quarters of the crew understand the English language. The effect of such a provision is especially severe on the Pacific, where American shipping has to compete with Japanese. The American shipowner desires to be allowed to bid freely in the markets of the world for his labor.

It is the old, old story.

The reactionary interests which opposed the enactment of the Seamen's law have not become reconciled to the change.

At a time when nearly every citizen of our country is looking forward to a new era in shipping; when the vast majority of our people are again taking an interest in nautical affairs and are fondly anticipating the fulfilment of the promise, made during the war, that we are to have a real American Merchant Marine—the old stand-pat forces brazenly ask for permission to man America's mercantile fleet with Chinese coolies.

This, and this only is the interpretation of that strange request: "to be allowed to bid freely in the markets of the world for labor."

What shall the answer be?

Unless we seriously mistake the temper of the American people, and particularly of that very substantial portion which fought "to make the world safe for democracy," the answer will be unmistakably to the point.

A so-called American Merchant Marine, manned by Asiatics who cannot speak or understand the language of the ships' officers, is about as valuable to the nation in time of trouble as an immense flock of airplanes totally unable to rise from mother earth.

But the fellow who wants "to bid freely" for his labor is little, if at all, concerned about the nation "in time of trouble." He belongs to the type who recognize no duty to man, country or God.

"ANARCHISTIC PERSUASION."

In an orgy of joy, caused by the defeat of the Anti-Injunction bill in the California Senate during the week, the San Francisco Chronicle brays as follows:

> The Anti-Injunction bill which has been defeated in the Senate was not in the interest of labor, or even union labor. It was, however, in the interest of labor leaders, of whom altogether too many are of the anarchistic persuasion.

For obvious reasons the Chronicle refrains from abusing the entire American labor movement which, as is generally known, has been a unit in demanding the enactment of laws curbing the Injunction Judge.

The Chronicle simply lacks the nerve to label the entire trade-union movement as anarchistic because there might be retaliation of a kind that can not be stopped by Injunction Judges. But, after all, it matters not what the poor, old, reactionary Chronicle editor says about the Anti-Injunction bill. The fight for an effective Anti-Injunction Act will be continued in California, as elsewhere, until victory has been achieved. As a matter of fact it is conceded that the present California Legislature would have passed such a bill were it not for the effective work by the Governor's political lieutenants. The Governor vetoed this measure two years ago. Therefore, no means were spared to prevent the bill from coming to his office for a second veto.

In another column of this issue will be found the address of Senator Flaherty in support of the bill. It is an able and scholarly presentation of Labor's contention on the Injunction issue and should be read and digested by all who want to keep abreast of the times.

PROGRESS IN ENGLAND.

The March issue of the "Marine Caterer," official paper of the National (British) Union of Ships' Stewards, Cooks, Butchers and Bakers, contains an interesting and instructive summary of the industrial situation in Great Britain and Ireland. The article concludes with the following optimistic comment on a recent get-together meeting of the various marine unions:

> We are making considerable progress in our own industry. For the first time a joint meeting was held in London, at the Cannon Street Hotel, on February 10, of representatives of the masters, officers, engineers, sailors and firemen, and our own society. A very interesting discussion took place on the various points raised, and it was decided unanimously to agree to an Industrial Council, representative of all seafarers and shipowners, and a sub-committee was appointed (of which our General President was a member) to draft a scheme with the formation of the said Council as its object. Further meetings will be held, and we are hoping to be able to report in our next issue that all branches of the Mercantile Marine are united in a common policy for the benefit and advancement of all seafarers.

The foregoing clearly indicates that, regardless of rating, the seafarers of Great Britain and Ireland are going to stick together on all points affecting the nation's welfare. No one can take exception to such a stand. In fact, this British way of doing things should serve as an object lesson for associations of licensed officers in our own country, who are still keeping their own council, separate and apart from the International Seamen's Union of America.

Writing about progress in England reminds us that to date, not a word has been received from Comrades Furuseth and Flynn, who represented the organized seamen of America at the International Congress of Seafarers which convened in London on February 24. Evidently our delegates have reached the conclusion to carry their reports upon this memorable gathering in their heads rather than on paper.

SEDITIOUS LITERATURE!

Canadian Immigration authorities at Bridgeburg recently detained and deported Joseph Schlossberg, General Secretary of the Amalgamated Clothing Workers of America, who was traveling to Toronto from New York. The charge against him was that he had in his possession seditious literature.

The Advance, official organ of the Clothing Workers, says that the literature found in Mr. Schlossberg's possession consisted of copies of The Public, Advance, the New Republic, the Survey, the Nation, and the Christian Science Monitor, and most incriminating of all in the eyes of the Canadian officials, a copy of "The Only Possible Peace," by Dr. Frederic C. Howe, United States Immigration Commissioner at the port of New York.

Those seafarers, and other wage-earners, who enter Canadian territory in the course of their employment had better be careful. If possession of the excellent publications mentioned above is sufficient evidence to cause deportation from Canada almost anything is likely to happen.

Until a new policy has been established persons intending to visit Canada should carry with them only light reading matter such as the Congressional Record, the works of Guy de Maupassant, Grimm's Fairy Tales, and the Ladies' Home Journal.

THE RAILROADS.

The voice of Labor everywhere is unanimous and insistent that the Government not only continue to operate the railways, but to own them. As a result of the referendum vote just taken by the fourteen labor organizations operating the railroads, and representing 1,900,000 men, an almost unanimous vote has been returned in favor of Government ownership. Here are some of the results of the poll: Machinists—For private control, 426; against 130,935. Blacksmiths—For, 75; against, 26,710. Car Men—For, 805; against private control, 110,972.

The various organizations that have gone on record almost to a man as endorsing the Government ownership plan follow:

Brotherhood of Locomotive Engineers, Brotherhood of Locomotive Firemen and Engineers, Order of Railway Conductors, Brotherhood of Railway Trainmen, International Association of Machinists, International Brotherhood of Boilermakers, Iron Ship Builders and Helpers of America, Amalgamated Sheet Metal Workers' International Alliance, International Brother-

hood of Electrical Workers, Brotherhood of Railway Carmen of America, Brotherhood of Railway Clerks, Freight Handlers and Station Employees, Switchmen's Union of North America, Order of Railway Telegraphers, United Brotherhood of Maintenance of Way Employees and Railway Shop Employees.

The result of this referendum strikingly bears out the assertion recently made before the United States Senate Interstate Commerce Committee by Frank G. Morrison, Secretary of the American Federation of Labor. He said: "The country is on the eve of an era of Government ownership, and Labor as represented by the American Federation will support it to the limit."

THE UNION LABEL.

The declaration of the Committee on Education of the American Federation of Labor that "Educated manhood and womanhood are the Nation's greatest asset, both in peace and war," is a fundamental upon which all can agree.

If the education of the children results in such a great asset to the Nation, it is self-evident that the application of the same principle to the trade-union movement would be advantageous to every worker.

One of the great agencies through which the workers can be educated is the union label, that potent but silent messenger of industrial peace and social betterment which should guide them in the utilization of their purchasing power just as the beacon light aids the mariner to avoid the dangers of the sea.

The union label, representing as it does, the best possible working conditions, makes a direct appeal to all fair-minded people to discriminate against the exploiter of women and children and the man convicted of crime, by refusing to purchase commodities upon which this emblem of fair labor does not appear. By carrying this principle a little farther and dealing only with stores where union cards are displayed or buttons worn by the clerks indicating membership in a labor union, immeasurable benefits are bound to result.

By co-operation of this character the billion or more of dollars spent by trade unionists each year could be made so powerful an influence for good that it would be amazing, and the educational value of such co-operation would be so beneficial and permanent that it would not be confined to the workers but would extend to all branches of society.

The union label has been of inestimable value to trade unionists in securing improved working and living conditions, and if the workers would "practice what they preach" by a continuous and persistent demand for union-made goods, these benefits could be increased and continued indefinitely.

"The great working classes of the world . . . have by their consciousness of community of interest, by their consciousness of community of spirit done perhaps more than any other influence has to establish a world opinion; . . . and those of us now charged with the responsibility of concluding peace must think, act, and confer in the presence of this opinion."—President Wilson, January 6, 1919.

THE INJUNCTION ISSUE.

Address by State Senator Lawrence J. Flaherty in Support of the Anti-Injunction Bill in the Senate of the State of California.

(Editor's Note—Senator Flaherty is a member of Cement Finishers' Union No. 580. of San Francisco, and is a recognized spokesman for Labor in the California Senate.)

* * *

The Anti-Injunction bill, which I now ask you to support, is the identical measure which was approved by the last Legislature and vetoed by Governor Stephens.

I shall not comment upon the Governor's veto, nor criticize his published reasons for vetoing Labor's most important bill. I do, however, want to say a word or two in reply to the talk around the lobbies to the effect that it is a mistake and a useless waste of energy to press this measure for passage, when it is known in advance that the Governor will again veto the bill.

Permit me to call your attention to the fact that the present Federal Immigration Act, containing the literacy test for immigrants, was vetoed by three Presidents and was finally passed over the veto of President Wilson. And to-day, as the result of the lessons taught by the war, the American people are fairly unanimous in demanding even more stringent immigration restrictions than were urged so persistently for all those years by the American Federation of Labor.

Nothing is ever settled until it is settled right. Unlike the I. W. W.'s, who sneer at all laws and assert that the end justifies the means, the workers organized under the American Federation of Labor come here, man fashion, declaring that they suffer under government by Injunction Judges. They ask for a remedy at your hands because they see no other way to protect themselves.

Our members are intimidated; the more courageous go to jail; but we have no solution and can have no solution of this judge-made law until such time as, either by law or the power of public opinion or our own power of self-assertion, we can make it impossible for any judge to sit on the bench and take away, directly or indirectly, any constitutional right which we find necessary to exercise in our trade union activities.

This in brief is our reply to the talk that we are wasting our efforts to push forward the Anti-Injunction bill.

We ask for this law, and shall continue so to do, because we are convinced that it is just and right.

We ask for this law because no weapon has been used with such disastrous effect against trade unions as the injunction in labor disputes. By means of it the workers have been prohibited under severe penalties from doing what they had a legal right to do. It is difficult to speak in measured tones and moderate language of the viciousness with which unions and trade-unionists have been assailed by the injunction, and to the working people of California as to all fair-minded men, it seems little less than a crime to tolerate it longer.

We do not object to the injunction in itself. If properly used in its own sphere, as determined by English and American judicial decisions prior to 1890, the injunction may be useful and necessary. An injunction was merely an order by a court of equity, commanding a certain person or persons to desist from some action proposed or actually begun, and it had been effectively used for the protection of property where the injury contemplated would have been irreparable, or of such a nature that adequate damages could not be calculated. The injunction was in the nature of an ounce of prevention and was intended to obviate certain civil injuries by applying to them what was practically, though not technically, a criminal punishment.

It was not until the opponents of the organized workers decided upon concerted movement against labor organizations, that the full possibilities of the injunction, as distorted and perverted by the courts, became apparent. The matter of procedure in injunctions is inimical to the welfare of free government, since it sweeps aside the constitutional safeguards.

The judge upon application and under certain prescribed conditions, issues a preliminary injunction against a person or persons, known or unknown, or against all those engaged in a given industry, without service upon any of these parties and without opportunity to them to appear and be heard before the preliminary injunction is granted.

The preliminary injunction is usually prepared by the plaintiff's attorney, who states therein whatever he wishes, and no opportunity is offered the defendant before the granting of the restraining order, to make counter-affidavit or to show cause why the preliminary injunction should not be issued. During the often unreasonably long time which elapses between the grant of the preliminary injunction and the time set for the hearing to determine whether the injunction shall be continued, a strike may be lost and thousands or tens of thousands of men defrauded of their rights and disappointed of

(Continued on Page 10.)

OFFICIAL.

SAILORS' UNION OF THE PACIFIC.

Headquarters, San Francisco, Cal., Mar. 31, 1919.
Regular weekly meeting came to order at 7 p. m., Joe Faltus presiding. Secretary reported shipping fair. A Quarterly Finance Committee was elected to examine the accounts of the Union for the past three months.
JOHN H. TENNISON,
Secretary pro tem.
Maritime Hall Bldg., 59 Clay Street. Tel. Kearny 2228.

Victoria, B. C., March 24, 1919.
No meeting; shipping slow; members scarce
J. ETCHELLS, Agent.
Room 11, de Cosmos Block, 1424 Government Street.

Vancouver, B. C., March 24, 1919.
Shipping fair; prospects good.
W. G. MILLARD, Agent.
58 Powell Street E. P. O. Box 1365. Tel. Seymour 8703.

Tacoma Agency, March 24, 1919.
No meeting. Shipping and prospects uncertain.
H. L. PETTERSON, Agent.
2016 North 30th St. Tel. Main 808.

Seattle Agency, March 24, 1919.
Shipping medium.
P. B. GILL, Agent.
84 Seneca St. P. O. Box 65. Tel. Main 4403.

Aberdeen Agency, March 24, 1919.
No meeting. Few men around; shipping fair.
ED. ROSENBERG, Agent.
P. O. Box 280. Tel. Main 557.

Portland Agency, March 24, 1919.
Shipping good; prospects good.
JACK ROSEN, Agent.
88½ Third Street. Tel. Main 6013.

San Pedro Agency, March 24, 1919.
Shipping fair.
HARRY OHLSEN, Agent.
128½ Sepulveda Bldg., Sixth St. P. O. Box 67. Tel. 137 R.

Honolulu Agency, March 17, 1919.
Shipping poor; prospects poor.
JACK EDWARDSON, Agent.
P. O. Box 314. Tel. 2526.

MARINE COOKS' AND STEWARDS' ASSOCIATION OF THE PACIFIC COAST.

Headquarters, San Francisco, Cal., Mar. 27, 1919.
The regular weekly meeting was called to order at 7 p. m., Eugene Burke in the chair. Secretary reported shipping slow. A Quarterly Finance Committee was elected to go over the finances of the organization for the past quarter.
EUGENE STEIDLE, Secretary.
42 Market Street. Phone Kearny 5955.

Seattle Agency, March 20, 1919.
No meeting. Shipping fair.
LEONARD NORKGAUER, Agent.
Grand Trunk Dock, Room No. 203; P. O. Box 214. Phone Main 2233.

San Pedro Agency, March 20, 1919.
Shipping slow. Few cooks ashore.
JOE MACK, Agent.
613 Beacon St. Phone Sunset 336. P. O. Box 54.

Fourteen members of the crew of the steam schooner "Florence Olsen" have filed a libel suit in the United States District Court at San Francisco against the steamer schooner "Claremont" and her owners. The plaintiffs ask that they be awarded $35,000 as salvage for saving the "Claremont" and her cargo of mahogany when that vessel was wrecked off the coast of Nicaragua in October of last year. According to the complaint, both the "Claremont" and her cargo, making a total value of about $300,000. would have been lost if the crew of the "Florence Olsen" had not salvaged the vessel and towed her into port.

A. F. Pillsbury, district manager of the Emergency Fleet Corporation of the United States Shipping Board has resigned. The resignation has been accepted to take effect some time in April. Pillsbury said during the week that he had promised to remain in charge here until some time in June, but if his successor was appointed he preferred to return to private work sooner. No other changes have been announced, but it is rumored that when the chief leaves other changes may follow.

OUR WASHINGTON LETTER.

(By Laurence Todd.)

American, British and Canadian labor has tired of waiting for governmental schemes of reconstruction to be made good. That's the first explanation of this week's tremendous events—events that can be described only as the beginning of a new industrial state.

Take America first. Frank J. Hayes, international president of the United Mine Workers of America, after investigating the deep current of unrest among the coal miners in this country, has declared for the nationalization of the coal mining industry. The proposition has been endorsed by committees at the meeting now under way at headquarters in Indianapolis. The six-hour day, and full representation of the organized miners in the operation of the industry, are included in the demands.

This is just what the 2,000,000 railway workers have already demanded from Congress. We have, then, the fuel and transportation men lined up to abolish private ownership or operation of the fuel and railway industries. The next logical step is a definite alliance between the fuel workers, including the oil workers, and the railway workers, to stand by each other in their respective demands. These demands can be met only by Congress.

Next turn to Great Britain. Recent dispatches tell that the Triple Alliance of coal miners, railwaymen and transport workers is about going out on a strike which will paralyze the country and probably will cause the fall of the Lloyd George cabinet, and will bring the Labor Party into full political and industrial control of Britain—unless the men's committees decide tonight to compromise once more with the Government. Thus far the ministry proposes a compromise of the six-hour demand of the coal miners, a compromise of the wage demands of both the coal miners and the railwaymen, and promises of an indefinite and unsatisfactory sort upon the vital issue of nationalization of mines and railroads. As for democratic management of the industries through committees of the workers, that also is a question upon which the men seem to have been given an evasive reply.

British business interests are divided as to whether they should yield to these revolutionary demands. One element—the largest and loudest—calls upon Lloyd George to suppress this "revolt" of the British workers with the full military power of the nation. Another element of employers urges getting any sort of compromise, or even giving all that is asked, in the hope that this will be the last of the movement. The majority of the employers, however, believe that if the government yields to labor in this case, then its power has been discredited, and a soviet form of government will spring up to take charge of all of the industries in the name of labor. Having everything to lose, these employers prefer to have the government do their fighting for them now.

Canada has just had to take charge of some of her chief railroads, just after coming into head-on collision with the labor movement. These railroads are thoroughly organized. In the five Western provinces, covering the part of the Dominion westward from Lake Superior, a delegate convention has voted unanimously to submit to a referendum of the affiliated unions the question of cutting loose from all international unions and forming themselves into one great industrial labor body, in order to meet the hostile government policy by tactics of general strike if need be. Leaders in this new movement were recently in Washington, negotiating for the formation of a Canadian division or region in the Railway Department of the American Federation of Labor. That plan was not approved by their locals, it appears, and now they have adopted in convention at Calgary the Australian plan of a unified industrial movement, embracing everyone from the logger to the postman, throughout Western Canada. Returned war veterans are said to have had much to do with this decision, which brings the shop-stewards movement from Britain to the Dominion, and puts the power of general strike into the hands of the workers in every locality.

At headquarters of the Metal Trades Department in the A. F. of L. building there is great activity to-day. More than a hundred delegates are here from the Pacific coast and from the Gulf, taking part in the regional conferences of the shipbuilding trades. Separate sets of demands for the Pacific coast, the Atlantic and Gulf regions and the Great Lakes region, are being drawn up, to cover rates of wages, union recognition, the eight-hour day and other issues. As the Macy board abdicates its powers on March 31, the unions are getting their demands for the private owners of shipyards ready for submission on April 1.

One of the difficulties that has yet to be met is presented by the Bethlehem Steel interests. A complete union shop agreement has been signed with the Bethlehem Shipbuilding Corporation, of which Eugene Grace is president. Yet the Bethlehem Steel Co., of which this same Eugene Grace is president, and whose chief owners are identical with the stockholders of the Bethlehem Steel Co., is still fighting organized labor in the steel plants. When asked by metal trades spokesmen about this performance, Grace said that he would have to prove to the Steel Co. stockholders that it would pay them to deal with the unions. The fact seems to be that United States Steel has given orders to Bethlehem Steel that no unionism must be permitted to cross the deadline between the shipyards and the steel mills.

However, neither Grace nor United States Steel can stop the organization of the steel workers in Pennsylvania. A warning has gone out to prepare for a possible strike and lockout, running from Ohio to the Atlantic coast, and including particularly the Youngstown, Pittsburgh and Bethlehem steel plants. One of the chief officials of the Department of Labor is about to make a report on the situation, and appeals were telegraphed to the organizers last night to suspend action for a few days until his report can be brought before the cabinet officers.

But the Machinists have already concentrated their organizers from five Pennsylvania towns at Harrisburg, in order to direct the fight from a State headquarters. The workers in the tin mills are to follow suit on March 30th. Frank Morrison, secretary of the A. F. of L., has told three big mass meetings of the workers at the Cambria steel mills in Johnstown that "The American Federation of Labor is squarely behind you," and has begged them only to keep their heads and not to strike until that step becomes necessary. He has denounced the officials of the Cambria Steel Co. as "I. W. W. and Bolsheviki."

At Coatesville, signs of approaching industrial war are even more evident. Dozens of active unionists have been kidnaped, with the help of State constabulary, and run out of the district. The Midvale Steel Co., arrogant and blind to the new conditions, has published a statement to the effect that it has deported only "undesirables." All of the international unions involved in organizing the steel industry are now forced to choose between seeing their men run out of Pennsylvania in the fashion adopted at Bisbee, or of giving battle and staying to the finish. Chances that the Government will prevent a clash are exceedingly slight.

As though the metal trades organizations were not sufficiently busy with shipyard demands and this steel mill situation, those in the Railway Department of the A. F. of L. are holding daily sessions with the regional directors of the Railroad Administration, to complete a uniform agreement with the management of the railroads in each region throughout the United States. While they are all working for permanent Government ownership and democratic management of the railroads, as a concession to be won from Congress, they are making direct terms with the managers as to the conditions under which the men in the railroad industry are to be employed in the meanwhile, regardless of how long Government ownership is delayed. These negotiations will probably be a complete success.

Postmaster General Burleson won't negotiate with anybody in the labor world. He is out to-day with another broadside of denials that he has discriminated against union men and women in postal and telephone service. Frank Morrison wrote to President Wilson recently, and Miss Julia O'Connor of the Telephone Operatives' Union also wrote the President, pointing out Burleson's autocratic repression of the unions and his unwillingness to tell a straight story about conditions in his unhappy and spy-cursed department. But since Burleson demonstrated that he could drive as big a national character as David J. Lewis from his department for even slight sympathy with unionism, Burleson's dismissal from the cabinet has become a forlorn hope. As a breeder of distrust in politics of the usual sort, the Postmaster General deserves all the medals.

It was Burlesonism, essentially, that drove the Australians into their One Big Union, and that tormented the Western Canadians into their experiment in mass tactics and secession from the international trades unions. It is fortunate for the American Federation of Labor that the Secretary of War and the Secretary of the Navy have been utterly hostile to every one of Burleson's prussianisms.

It is not to be expected that a child brought up under the restraints of factory labor will develop a very high regard for liberty of any kind.

FEED HUMANITY AND SAVE IT.

(By W. B. Rubin.)

Not a day passes without some newspaper headline boldly challenging the eye with such as these:

"Food alone will save Germany from the Reds."

"Food riots by Soviets in Russia."

"Belgium starving."

"Food famine in Europe."

From the storehouse of misfortune in every nation, including the United States, hundreds of like philippics might be taken and hurled, fastening the attention of our consciousness to a terrible and horrible situation that has overtaken mankind.

The whole world is hungry.

Men out of work and without means are facing starvation.

Men at work, but with the cost of food beyond their reach, too, go hungry.

The stomach plays an important part in the life of man. Upon the battlefield and at the peace table, it dictates terms. It grants no armistice and recognizes no amnesty.

A breakfast has more than once been the invisible force behind the judge's decision.

Food is the chief factor of the world's problems of to-day.

The world's profoundest statesmen may meet and restate in new rhetorical terms a world's concepts, but their reception will rest largely upon how well the people's stomachs are filled.

It is a wise mother-in-law who admonished her daughter,—"If you want to keep your husband's love, feed him." And so, if things are to stay as they are, we had better get busy and feed the workers of the world.

But the feeding to-day has taken on a different form. There was a time, and it ran through centuries, when alms were acceptable to the workers out of work, when England granted to soldiers the right to beg without police interference. But the soldier of to-day resents all this.

He comes back and boldly tells you of the sacrifices he made when he entered the service, and he speaks the truth. He boastfully tells you of his fighting and winning for democracy, and he does not overstate his efforts. Now he demands work, and plenty of it,—food, and enough of it, and he is right.

What are you going to do about this?

Soft speeches, entertainment, ladies? No. He is hungry. No sermon ever satisfied a hungry man. No entertainment, however good, ever stilled a hungry stomach. And no ladies, however loving, ever held a starving man.

It is serious, damned serious.

Statesmen, no wonder you are alarmed and see specters of Bolshevism and Spartacusism. No wonder, wherever you turn, you see red. The political roulette wheel has been tampered with and its black settles upon your political defeat and oblivion.

What are you going to do about it?

Labor has risen, like a hungry giant, out of a sickbed of lethargy, and cries for food. The first sign of a return to health is the assertion of the appetite. The workmen of to-day have an unappeased appetite for the menu of a blessed government,—political, social, and industrial satisfaction.

What are you going to do about it? Give it to them!

MORE ECHOES FROM BERNE.

(From "The Survey.")

The spokesmen of the American Federation of Labor are more and more standing alone in their opinion of the Berne conferences and what they have accomplished. An article in the American Federationist for March repeats such statements as these:

> On its face the Berne congress will be merely the meeting of the old Socialist Internationale, with the difference that in almost every country the Socialist parties have lost their strength during the war, and with the added difference that bolshevism and pro-Germanism have either annexed or confounded most Socialist organizations in whole or in part....
>
> From the standpoint of realism the Berne congress will differ from a meeting of the old Internationale only in the new but startling and sinister bolshevism injected into it....
>
> There are now two principal dangers in the Berne conference for the Allies. They are that the Berne congress will vote an indorsement of bolshevism and the Bolshevik "government" in Russia, and that the German majority Socialist delegation will induce the delegates from neutral and allied nations to indorse certain points of the German peace program and especially to work for the reduction of the amount of money Germany must pay for her criminal marauding.

Lest the account of the actual happenings at the two recent conferences in Berne given in several American journals be insufficient to refute this continued effort to establish a connection between these events and "bolshevism," a link that has never existed, more recent evidence may be of use. Mr. Lloyd George, after receiving at Downing street the members of the British delegation to these conferences, consisting of members of the Parliamentary Committee of the Trades Union Congress and of the Executive Committee of the Labor Party, and after discussing with them very fully the resolutions passed at Berne, indicated his agreement with a number of the proposals made and, according to the Times, "indicated that the work at Berne had certainly been of value, and he would see that the resolutions were brought to the attention of his colleagues."

Mr. Branting, the leader of the Swedish Socialists, in an interview with an editor of the Daily News said that the contrast between the attitude of the German majority and minority Socialists at Berne was extraordinary.

> The former were almost consciously prisoners in the dock, charged with treason to the Internationale, and finding it no easy matter to clear themselves. The minority, on the other hand, held their heads very high, as on the whole they well might.

Arthur Henderson, in an interview after his return, said among other things:

> The only alternatives before the majority Socialists were to leave the conference or to respond to the moral pressure of an indisputable case. They took the second course, and this in my judgment, was the first definite contribution towards the forthcoming reconstitution of the Internationale. It is only the first step....
>
> The importance of their declaration on the responsibility of the old imperial government cannot be over-emphasized, for it brings them in line with the independent Socialists and provides irrefutable justification for the policy of the British Labor Party in actively supporting armed resistance to Germany's military aggression....

Finally, there may be quoted an extract from the speech made by J. Ramsay Macdonald—whom the A. F. of L. speakers do not tire of accusing as a truckler to bolshevism—in the debate on that subject:

> Those looking for some rapid patent way of establishing socialism in the world must be challenged in a friendly way to reconsider the value of their tactics. We are living in absolutely abnormal times. There is a reaction towards conservatism and a reaction towards revolution which come when the fabric of society has been shattered by some great social upheaval like the recent war.
>
> The duty of the Socialist movement is to keep a calm mind and sound judgment, and to give a steady lead on the right path. A tyranny by a minority might be justified in certain circumstances, but the moment it becomes the basis of a continued policy it must be condemned by every Socialist who believes in democracy and stands for the majority rule and the liberty of the individual.
>
> We welcome the revolutions in Russia, Germany, Austria and Hungary, but those revolutions must not create conditions which replace one tyranny by another. A revolution which does not establish liberty is not a revolution towards socialism. Unrest must always be in the main constructive, not destructive, and must be inspired by a definite conception of social reorganization.

At the present time Uruguay is the country where shoes are the cheapest. This is due to the extensive use of machinery and the development of the Uruguayan tanning industry. Three-fourths of the leather used in local shoe factories is tanned in Uruguay and tanners are even exporting sole and patent leather. It may be said that the only shoe leathers imported in quantity from abroad at the present time are glazed and colored kid and colored calf. Other classes of leather, such as box calf or vici, upper, chamois, sheep calf, matte calf, etc., are turned out by Uruguayan tanneries.

Nature provides a compensation for every misfortune. The internecine troubles of the labor movement keep us from worrying about our troubles with the natural enemy.

Labor's Economic Platform

Following is the Economic Platform adopted by the American Federation of Labor:

1. The abolition of all forms of involuntary servitude, except as a punishment for crime
2. Free schools, free text books and compulsory education.
3. Unrelenting protest against the issuance and abuse of injunction process in labor disputes.
4. A work day of not more than eight hours in the twenty-four hour day.
5. A strict recognition of not over eight hours per day on all Federal, State or municipal work, and not less than the prevailing per diem wage rate of the class of employment in the vicinity where the work is performed.
6. Release from employment one day in seven.
7. The abolition of the contract system on public work.
8. The municipal ownership of public utilities.
9. The abolition of the sweat-shop system.
10. Sanitary inspection of factory, workshop, mine and home.
11. Liability of employers for injury to body or loss of life.
12. The nationalization of telegraph and telephone.
13. The passage of anti-child labor laws in States where they do not exist and rigid defense of them where they have been enacted into law.
14. Woman suffrage co-equal with man-suffrage.
15. Suitable and plentiful playgrounds for children in all cities.
16. The Initiative and Referendum and the Imperative Mandate and Right of Recall.
17. Continued agitation for the public bath system in all cities.
18. Qualification in permits to build of all cities and towns, that there shall be bathrooms and bathroom attachments in all houses or compartments used for habitation.
19. We favor a system of finance whereby money shall be issued exclusively by the Government, with such regulations and restrictions as will protect it from manipulation by the banking interests for their own private gain.

NO FUNDS FOR LABOR.

(By Grant Hamilton.)

The House Appropriations Committee in the last Congress dealt the Department of Labor a terrific blow by refusing to recommend any appropriations for the Services (with the exception of the Woman in Industry Service) instituted by the Department during the war and which are vital as peace-time agencies. In marked contrast to this effort to make the Department of Labor even less effective than before the war, appropriations were provided all other Departments to enable them to broaden their work to meet developing needs.

It was evident a few days before the House Appropriations Committee made its report that a drive was being made by hostile interests to destroy the Department of Labor so far as it was possible to do so. The report of the Appropriations Committee to the House confirmed the information that an attempt was to be made to strangle the Department. The Senate did not act upon the sundry civil bill, and therefore these hostile influences have as yet not been able to carry out their program. The same sort of campaign is being prepared against the Department in the coming Congress.

The Services that are vital to the interests of the Department are the Employment Service, the Working Conditions Service, and the Woman in Industry Service.

If labor in this country desires to maintain an agency in Government to represent its interests, it will be necessary for it to make emphatic protests against the Department being stripped of the Services mentioned. Senators and Representatives should be notified officially by unions in their districts that it is the judgment of organized labor that the Employment Service, the working conditions service, and the Woman in Indufistry Service. should be maintained as peace-time organizations, with adequate appropriations. Every worker can protect his own interests and those of fellow-workers by writing his Representative and Senators in behalf of the Department of Labor.

Labor by acting in concert will be rendering valuable service to the Department of Labor, the creation of which was the result of many years of tireless effort. The American Federation of Labor is giving its full support to the end that the Services mentioned shall be retained.

WHY HOLD BACK?

According to statistics gathered by the Department of Labor, there are now being held up for various reasons 3,226 public projects, approximating more than a billion and a quarter dollars. There are also 2,999 private projects upon which work is being delayed. These approximate five hundred million dollars of construction work. Together, there is nearly two billion dollars worth of public and private construction work being held up in the country, apportioned among all the States, from Vermont's four public projects, valued at $1,032,500, to the 220 public projects in Illinois, worth $130,877,476.

This is all necessary construction work—public roads, buildings, sewers, water improvements, school buildings; in fact, everything that will enhance both the community value and the comfort of the people.

The money that is put into these undertakings will all be returned to society in different forms of wealth, in safeguarding the health and lives of the people, in educating children who are to be the future workers and builders of the Nation, in making transportation easier and quicker, in a thousand ways that we can not set down in definite, tangible form. This work requires labor. Labor is now to be had. Everywhere men are looking for jobs.

Why not put every man to work making the country more valuable and making provision for the future efficiency of our boys and girls by building the schools that are the first essential to proper education?

There isn't any reason of expediency that can justify this holding up of public work. In fact, there is every reason for beginning operations at once.

No matter what happens, the people will be called upon to pay the bill. It were far better to pay this bill in wages, to labor, and thus bringing contentment to the people, than in social payment for the dangers that may develop through a large force of idle workers.

The logic of the situation demands that the public work held up be begun without delay. That is clearly the duty of every community to itself. Labor that was prized in war should not be wasted in peace. Idleness is waste all the time.

This country does not lack initiative. Within its borders are the directing powers of vast industrial forces; within the hearts of the people is the willingness to do; within every community is the public spirit that is ready to co-operate, to act when a beginning has been made.

Then why hold back?

Start the delayed public work at once.

Years ending with the figure eight seem to have a certain fatality in the history of kings. For instance, 1568 saw the destruction of Philip II.'s hope of an extended empire; 1618 was the beginning of the Thirty Years' War, with the misery which the ambition of princes brought upon Europe. The year 1638, by the Petition of Right, marked the first real revolt of the British people against the doctrine of the Divine Right, a revolt consummated in 1648. The death of Cromwell in 1658 put a period to another form of autocracy. The first Partition Treaty, in 1698, was one of the landmarks in the history of the barter of peoples by their kings. The alliance of France and Spain with the United States in 1778 brought another democratic power into full life, and the Battle of the Nile, 1798, crushed Napoleon's dreams of an eastern empire, and several European rulers will remember 1918 for a long time.

The late Professor Lounsbury of Yale was a foe of the purist and pedant. On a summer vacation in the Adirondacks, he gazed across the lake one gray and sultry afternoon and remarked: "It looks like rain." "What looks like rain, professor?" chuckled a pedant in a rocking-chair. "I've got you there." Professor Lounsbury turned a cold eye upon the critic and answered, "Water."

THE INJUNCTION ISSUE.

(Continued from Page 7.)

their justifiable expectations. The preliminary injunction thus produces the very evil which it was intended to obviate or prevent, but for the workingman there is no remedy against the irreparable damage inflicted upon him by a temporary injunction illegally and wrongfully granted. If, during the time before the hearing, anyone in the whole world is known, or even supposed to be known to be guilty of a violation of any part of any clause of any section of an injunction, he may be summarily arrested, either then or later, and put upon trial.

In such trial he is denied the rights guaranteed to him as a citizen of the United States. A trial by jury is denied him and the judge passes sentence upon the sole ground of whether or not the preliminary injunction, issued without a hearing, has been disobeyed. The constitutional guaranties of liberty and property are denied and nullified by the judicial process. The court, after hearing the case in its own way, decides in its own way. The man is condemned to pay such fine or to suffer and undergo such punishment as the court in its wisdom may determine.

In any criminal action the law specifies the maximum punishment that may be inflicted, a trial by jury is guaranteed, but if the same offense is committed in violation of a temporary injunction, issued without a hearing, or without personal service, there is no jury trial, the punishment may be whatever the judge decrees, however much in excess of the maximum punishment fixed by the law of the State.

From this decision of the judge there is no appeal, and even if an appeal is taken upon the question of the jurisdiction of the court issuing the injunction, it is possible that the active men of the union may lie in jail during the appeal. In many cases, however, the striking workingmen are not in possession of sufficient funds to make an appeal, and generally the injury inflicted upon the defendants and those they represent is irreparable, even if the temporary injunction is eventually set aside.

In my own judgment this extension of the use of the injunction is the most disturbing factor in our national life—the darkest cloud overshadowing America. The elements who favor the injunction as applied in labor disputes are either consciously or unconsciously inimical to true democracy and are apparently in favor of what is practically a monarchical, even despotic form of government, and in favor of the limitation and restriction of the rights of the people. In all earnestness and sincerity, let me say that those who advocate further use of this injunction weapon are knowingly or unknowingly undermining the faith of the people in the Constitution and the laws of the land, and are destroying the confidence of the working people in the integrity and impartiality of the courts.

In conclusion, permit me to direct your attention to the fact that an Anti-Injunction law was passed by Congress several years ago. Also, that satisfactory anti-injunction laws were enacted in the States of Minnesota and Utah, two years ago. This year Oregon, Washington and North Dakota have already been added to the list of States which declare that the issuance of injunctions in labor disputes is not based upon law, but is a species of judicial legislation, judicial usurpation in the interests of the money power against workmen innocent of any unlawful or criminal act.

In behalf of equality, liberty and justice, I plead with you to vote for this bill. And, in doing so I want to reassert that the organized working people of California ask no immunity for themselves or for any other one who may be guilty of any unlawful or criminal act.

We do maintain, however, that we have a right to insist, and we do insist, that when a workman is charged with a crime for any unlawful conduct, he shall be accorded every right, be apprehended, charged, and tried by the same process of law as any other citizen of our great State.

OUR DUTY—NOT THEIRS.

(From the Australian Worker.)

Just now there are several people essaying to decide, amongst other things, the economic destiny of the world. But these wiseacres are forgetting one thing: The Labor Movement. And when they forget that, they forget the most vital and potential thing on earth. Let them issue their edicts. We of the working class will decide our own future.

"SAVING THE NATION."

A Connecticut legislative committee has reported favorably a bill to license Connecticut cats. It is claimed that the cats disturb sleep.

VALIDITY OF ADVANCE WAGES.

(Continued from Page 2.)

siding Judge, Henry G. Ward, was particularly called to the danger of assuming that what the master would testify to was, in fact, a stipulation of facts. The Circuit Court of Appeals, nevertheless, in an opinion written by Judge Charles M. Hough, based its decision on the same erroneous assumption of fact.

It would seem that the majority opinion of the Supreme Court in the case at bar, as to the application of this section, regarding payment of advance wages on foreign vessels while in foreign ports, was based upon what it believed to be the intention of Congress. The following is quoted from the opinion:

"The same general considerations as to the interpretation of the statute which controlled in the decision of the case of the 'Talus' are applicable here and need not be repeated."

The Court then concludes:

"But we are unable to discover that in passing this statute Congress intended to place American shipping at the great disadvantage of this inability to obtain seamen when compared with the vessels of other nations which are manned by complying with local usage."

Clearly, the error of fact as to what are the real conditions in South American ports had considerable weight with this Court in consideration of the question of the intention of Congress. Says the Court in the instant case:

"That American vessels might be controlled by congressional legislation as to contracts made in foreign ports may, for present purposes at least, be conceded."

It would seem, then, that the assumption of fact by this Court that it would put American ships at a disadvantage in obtaining seamen, as compared with foreign vessels in foreign ports, had material bearing on the case. The record, as shown above, indicates that if the master of the vessel did testify to such state of facts he would probably be committing perjury, for the testimony of all of these men, two of whom were disinterested and not parties to the action, clearly shows that the master could have employed these men directly for the ship had he desired, and there was, as a matter of fact, no such neecssity.

* * *

A reargument is urged on the further ground that this is an important question of public policy. It goes clear to the root and heart of our commercial policy. It will determine to a large degree what is to be our policy in attracting and controlling labor on our ships.

Section 4530 of the Revised Statutes, which was to have been considered in the "Strathearn" case (October Term Calendar of the Supreme Court of the United States, No. 935), applies to foreign and domestic vessels while in waters of the United States and to American vessels while in foreign ports. It gives to seamen a right that they have never enjoyed before under the laws of any other nation, to wit, one-half wages earned and due at the date of demand.

The enforcement of this provision of our statutes has attracted and is still attracting to our ships, our Flag and our citizenship large numbers of the most skillful, bravest and intelligent seamen of all nationalities. Hundreds of them find it an honor to become seamen of the United States not only, but have become officers and citizens during the last two years. These men all appreciate the advantages offered to them by this great Democracy, are willing and proud to serve in her merchant marine.

This case was advanced at the request of counsel for petitioners, and but a brief period (twenty-five minutes) was allowed him for argument.

The whole Seamen's Act is revolutionary and new; it has been much misunderstood by the District and Circuit Courts of the United States, largely because of our unfamiliarity with real maritime conditions and our lack of touch with seamen.

It is respectfully submitted that it is a debatable question whether or not the prohibition against advance wages paid on American vessels in foreign ports is a disadvantage to America. From counsel's knowledge of seamen and conditions, gained through an experience of ten years, seven of which were as attorney for the Seamen's Branch of the Legal Aid Society, he feels confident in expressing the opinion that seamen in South America and other ports will be attracted to American ships rather than to foreign ships because American shipping masters are not permitted to extract from them a month's pay; and counsel again refers to the opinion of Mr. Justice Day in the case of Wilder (supra), where a liberal enforcement of a statute extra-territorial in effect was given by this Court (211 U. S., p. 246):

"Neither the words used in the statute, 'attachment' or 'arrestment,' considered literally, have reference to executions or proceedings in aid of execution to subject property to the payment of judgments, but refer, as we have seen, to the process of holding property to abide the judgment. But we are of opinion that this statute is not to be too narrowly construed, but rather to be liberally interpreted with a view to effecting the protection intended to be extended to a class of persons whose improvidence and prodigality have led to legislative provisions in their favor, and which has made them, as Mr. Justice Story declared, 'the wards of admiralty.' Harden v. Gordon, 2 Mason, 541.

"We think too that the section is to be construed in the light of and in connection with the other provisions of the Title, of which it is a part. And we may notice that after providing against attachment or arrestment of wages, this very section goes on to enact that payment of wages to seamen shall be valid, notwithstanding any previous sale or assignment, or any attachment, incumbrance, or arrestment thereon; and that no assignment or sale of wages made prior to the accruing thereof shall bind the party making the same, except such advance securities as are authorized by this statute."

It is to be regretted, of course, that this decision was not more particularly called to the attention of the Court, but it was not assumed by counsel at the time of the argument that there could be any doubt in the Court's mind as to the applicability of this statute to vessels of the United States, where laws of a similar character controlling the relation of crew and owners and master while on the high seas, or in foreign ports, have been so fully provided and enforced in the past.

The erroneous fact did not develop as a matter of first importance until the decision of this Court made it apparent. The District Court overruled the decision of Justice Brown in The State of Maine, 22 F., 903, rendered thirty years before; the Circuit Court of Appeals based its decision on the same erroneous assumption of facts; and now it seems apparent that if another case were brought in which it was found as a matter of fact that seamen could be obtained without difficulty in Buenos Ayres on American vessels, without paying any advance, the case could be taken to this Court again on appeal.

These words in the statute, "The payment of such advance wages or allotment shall in no case except as herein provided absolve the vessel or the master or the owner thereof from the full payment of wages after the same shall have been actually earned, and shall be no defense to a libel suit or action for the recovery of such wages," have never been explained, applied or interpreted by any Court.

Inasmuch as Congress provided in the section for a penalty for paying advances in the jurisdiction of the United States, the only purpose of putting in such provision as this would be to give the section an extra-territorial effect and make proper declaration of the public policy of the United States on the subject-matter.

It has been assumed correctly by this Court that the Seamen's Act was intended to benefit not only seamen of the United States, but the merchant marine interests of the United States. The Act was conceived in the belief that under modern conditions better service from human beings employed on board a ship could best be obtained by fair treatment and a reasonable amount of liberty than by duress, oppression and slavery.

The crimp and advance-note system are the connecting links between the influences that make for the old order of control and the unfortunate victim; that the Seamen's Act should seek to destroy this vicious system is not surprising; that Congress should have endeavored to extend the Act as far as possible to both American and foreign vessels is reasonable only.

It is respectfully submitted that the conduct of merchant seamen on board American vessels and the absence of labor troubles and disputes during the progress of the war indicate that the judgment of Congress was good, that the confidence placed in its men was merited. Large numbers of seamen of foreign birth who have become citizens of the United States and officers in its merchant marine since the passage of the Act further indicate that the policy of Congress in liberating men employed aboard our vessels, giving them full opportunity for life, liberty and the pursuit of happiness according to the spirit of the Constitution and our laws, has caused their grateful appreciation, and that we, in turn, as a nation, are first beginning to feel the power of a growing merchant marine both in men and in ships.

Wherefore, on all of these grounds it is respectfully urged that to save the time of all parties concerned in bringing a new suit, in which the facts truly existing in this case shall appear on the record, and which case might be distinguished from the instant case, in the interest of our merchant marine, and in order that the policy of this Government may be definitely determined, the petition herein for a rehearing should be granted.

New York, March 1st, 1919.

Respectfully submitted,
SILAS B. AXTELL,
Attorney for Petitioners.

The criticism of the "labor leader" on the ground of his failure to lead his union into politics is rather a compliment to his attentiveness to his own business.

The largest American flag in existence hangs in the main hall of the Grand Central Railway Terminal in New York. It measures 80 feet by 160 feet.

Labor News

An experiment in co-operative housing is being worked out by the girls of the International Ladies' Garment Workers' Union of New York.

The United States Department of Labor at Washington, through a commission headed by Miss Alice Huntington, is conducting an investigation of living cost and other conditions in Des Moines, Iowa. The purpose is to assay the factors that bear on the cost of living with the intention of presenting legislation to Congress; Des Moines is taken as a type of many cities in the Middle-West.

In Illinois organized labor is taking a stand against the passage of a bill in the State Legislature providing for the establishment of a State constabulary. The Weekly News Letter of the State Federation of Labor contains a protest by J. H. Walker, president of the Federation, in which he declares that the "constabularies that have been created in several States where corporation interests dominate are really armed Government strike breakers."

Ten years ago the railroad payroll for the whole United States was $1,000,000,000, and the interest and dividends paid to railroad security holders was $700,000,000. Figures from Wasihngton officially state that last year the payroll was $2,400,000,000 and the security holders received $775,000,000, which shows that while the profits of the security holders are little above what they were, the receipts by labor have become two and a half times greater than they were a decade ago.

At the request of Prosecuting Attorney Hatch of Jackson, Mich., the leader of the mob that tarred and feathered a trade unionist last November was slapped on the wrist in police court and then discharged. Herbert Crawford, organizer of the Machinists' union was the victom of the mob, led by William Faupel, of the State cossacks. After Crawford was tarred and feathered Faupel left the city. The claim that an understanding was reached with public officials charged with law enforcement is given credence by the fact that the prosecuting attorney asked that the charge be changed to assault and battery. Then Faupel plead guilty and was fine $75. It is an open secret that the mob was composed of "respectable" citizens.

An alarming percentage of illiteracy among certain groups of working children is disclosed in figures made public by the children's bureau of the United States Department of Labor. These figures are based on the experience of the bureau in issuing federal certificates to children going to work in five States where State certificates were not acceptable for the purposes of the former federal child labor law. More than one-fourth, or 5,294, of the 19,546 between 14 and 16 years of age to whom certificates were issued could not sign their own names legibly. In the five States where 18,379 white children between 14 and 16 were certificated, but 742 had reached the eighth grade in school. Of 1,166 colored children only 40 reached the eighth grade. In other words, 96 per cent. of the white children and 97 per cent. of the colored children granted certificates had not reached the eighth grade.

You Want the Truth

This year there will be stirring times in the Nation. Under government censorship it is increasingly difficult for the average man to get the real meaning of the social and political movements of the day.

LA FOLLETTE'S MAGAZINE

will be specially represented at Washington and will analyze and present the news from the capital truthfully and fairly. Senator La Follette is making a real fight to lift some of the tax burdens from the common people and place them where they belong — on excess profits, war profits and surplus fortunes and incomes. Because of this he is being attacked more bitterly than any other man in public life.

Send in your order today.

$1.00 Per Year—Agents Wanted

La Follette's Magazine, Madison, Wis.

INFORMATION WANTED.

The salvage case of S. S. "Princeton" which salvaged the S. S. "Ardmore," both vessels owned by Standard Oil Company of New Jersey, has been tried and resulted in an award of $7,500 to the crew. This amount has been received, and members of the crew of S. S. "Princeton" are requested to call for same at the offices of Mr. Axtell, One Broadway, New York, N. Y.

For the benefit of the widow of John Karus, lost at sea, October 17, 1918, at 2:15 a. m., according to the report in the official log of the barkentine "Aurora," will all members of the crew of that vessel who know anything about the ship, the condition of her rigging, before and after the accident, or anything that will tend to explain his disappearance, communicate with the undersigned attorney for the widow?—Silas Blake Axtell, No. 1 Broadway, New York City. 1-1-19

Ellis R. Nelson, last heard from at New Orleans, La., Nov., 1916, when on board U. S. C. G. S. S. "Davy," is inquired for by his mother. Anyone knowing his whereabouts will kindly communicate with R. J. Nelson, 59 Clay St., San Francisco, Cal. 11-6-18

Members of the crew of the SS. "Munrio" who were on board said vessel at the time she salved the SS. "Curytibia" in the month of January, 1918, and who have not yet received their full share of the salvage award, will kindly communicate with or call on Silas B. Axtell, 1 Broadway, New York City 10-23-18

Carl Hansen, a native of Soon, Norway, age 35, formerly a member of the Lake Seamen's Union, is inquired for by his mother, Marn Hansen, 778 Sixth Ave., Milwaukee, Wis. 8-17-18

A club within a club!

Existing clubs represent organizations already formed.

Why not propose, at the next meeting, that your club become a War Savings Society for the rest of the war?

Each member agreeing to buy at least one War Savings Stamp per month.

Besides the saving—

It becomes the popular thing to do with less; to make what you have last longer.

Incidentally, it gives the Government a better market wherein to purchase things for soldiers.

INFORMATION WANTED.

An appeal has been taken by the owners of the Bark "Portugal" from the decision of the Federal District Court in the matter of salvage award of $30,000 recently made and referred to in these columns. The determination of this appeal may be a matter of six months. Seamen who wish to get their money as soon as possible should communicate with Silas B. Axtell, Attorney, One Broadway, New York, in order that I may send them a power of attorney form to be signed, which will be required by the court before the money can be paid out. The crew, of course, are sure to get some money and they will probably get their portion of the amount awarded by the lower court. It seems quite possible that the decision of the lower court will be affirmed.

Members of the crew of the SS. "Gulf of Mexico" may obtain money due them for salvage services rendered to the bark "Portugal" by communicating with Silas B. Axtell, Attorney for Seamen's Unions, 1 Broadway, Room J, New York City. 10-16-18

Home News

Furs worth $600,000 were disposed of at the recent fur auction in New York, when the prices that were paid are said to indicate that furs will be in the premier class of luxuries during the reconstruction period at least.

Senator Borah, opening a campaign against the League in New York, declared it to be nothing but a League of representatives of certain Governments to be endowed with the tremendous powers of making peace or war, and emphasized the single vote of the United States.

The liquor interests are planning a strenuous nation-wide campaign to have the prohibition amendment declared null and void. Levy Mayer is chief counsel for the distillers and is to direct the fight. It is suggested that perhaps Charles E. Hughes will be legal head of the contest in the State of New York.

A victory for the League of Nations is claimed as a true interpretation of the result of the election of the Democratic candidate, John H. Wilson, in the twenty-second Pennsylvania Congressional District last week. The district comprises Butler and Westmoreland Counties, which for many years have gone strongly Republican.

The National Civil Liberties Bureau, of 41 Union Square, New York City, is conducting a campaign of publicity for the purpose of gaining amnesty for all political prisoners. Its methods are dictated by the belief that there can be "no stronger argument for a general amnesty than an exact statement of the facts relative to the convictions under war statutes."

Herbert Hoover has been appointed by President Wilson as Director General of the American Relief Administration, created under the new $100,000,000 European Famine Relief bill, with full authority to direct the furnishing of foodstuffs and other supplies purchased out of the relief fund and to arrange for their transportation, distribution, and administration. Mr. Hoover was already Director General of Allied Relief under the commission sitting at Paris.

Director General Hines of the Federal Railroad Administration announced that the President had decided not to return the railroads to their owners until after the matter had been discussed in Congress and decisive legislation had been adopted. Mr. Hines made this announcement in a letter to Senators Smith and Martin, chairmen respectively of the Committees on Interstate Commerce and Appropriation, and Representatives Sims and Shirley, chairmen of the Committees on Interstate and Foreign Commerce and Appropriation.

The War Council of the American Red Cross, appointed by President Wilson on May 10, 1917, has come to an end. Henry Davison, chairman, issued a statement in which he said that during the past twenty-one about 500,000 members; to-day it has given in cash and supplies to the Red Cross more than $400,000,000; but that no value could be placed upon the voluntary service, which had been given without stint and often at great sacrifice by millions of Americans. When we entered the war the American Red Cross had about 500,000 members; today it has a full paid list of members of 70,000,000.

Domestic and Naval

The Atlantic, Gulf & West Indies Steamship Co. has declared four quarterly dividends of $1.25 on the preferred stock, payable as follows: April 1 to stock of record March 10; July 1 to stock of record June 10; October 1 to stock of record Sept. 10, and Jan. 1, 1920, to stock of record Dec. 10, 1919.

The British steamship "Juno," 1,302 tons gross, 835 net, carries about 1,302 tons deadweight, draft about 15 ft. 10 in. by 20 ft. 2 in., built at Hull in 1882, has accommodations for about 68 first-class and 32 second-class passengers, steams about 12 knots on about 30 tons, has been sold by auction in London to the Langdon S. S. Co., Ltd., London, for about £14,000.

Shipbuilding in the United States during the month of February, according to the figures of the Bureau of Navigation, Department of Commerce, amounted to 271,430 tons gross register, of which seagoing steel tonnage accounted for 206,106 tons gross (47 vessels), wooden seagoing tonnage 58,095 tons gross (26 vessels), a total of 73 vessels of 264,201 tons gross. Non-seagoing tonnage amounted to 62 vessels of 7,229 tons gross.

The British Board of Trade has issued instructions regarding the subdivision of British passenger ships to conform to the standards of the International Conventions of 1914 and the subsequent report of the Bulkheads Committee. Shipowners and shipbuilders are now finding that the large amount of technical work required in carrying these instructions into effect involves serious delay in the passing of plans. It would undoubtedly expedite matters if similar powers were given to the registry societies to deal with subdivision to those they now possess in connection with load lines.

It is estimated that upwards of 100 British steamers have gone to the Continent to be repaired. A remarkable fact is that Belgium, in spite of her disorganized state up till quite recently, has set about renewing her machinery and other appliances for ship-repairing, and is making rapid progress in that direction. Norwegian owners who handed over their vessels to the British Government are taking them back again after survey without being reconditioned under a special agreement as to repairs. Many of them have been brought into requisition which, though suffering from defects of a minor character, are quite seaworthy.

Since overtime work was stopped, not much has been heard about speed records in building ships. From Japan, however, comes a story about building a 9,000-ton d. w. boat in 29 days, back in October. The story is given in the Times (London) and is based on an alleged performance of the Kawasaki Dockyard Co., of Kobe, with the S. S. "Raifuku Maru." The keel of this boat was laid down at 7 a. m. on Oct. 7 last; the vessel was launched at 6 a. m. on Oct. 30. The official trials were successfully carried out on Nov. 5, and within a few days she sailed laden for South America. The length of this vessel is 385 ft., beam is 51 ft., and moulded depth is 28 ft. She attained a mean speed of 14.39 knots on the two trial runs of three miles each. The whole of the construction was carried out under the survey of Lloyd's Register.

News from Abroad

A new shipyard is being laid out in Finland at Nystadt on the Bothnian Gulf coast. A capital of 2,500,000 mks. ($500,000) has been subscribed, and steel ships of 3,000 tons d. w. are to be built.

Official returns show that 154 Greek steamers of 399,000 tons, and 126 sailing craft of over 12,000 tons, were sunk during the war. The value of these lost vessels is assessed at $200,000,000.

In Vienna there has been formed an association for the promotion of a League of Nations on the lines laid down by President Wilson; former Ambassador Dumba is one of the presidents of this Austrian association.

Thomas W. Gregory, the retiring Attorney General of the United States, is with President Wilson in Paris as general adviser and assistant at the Peace Conference. Mr. Gregory expects to be in Paris for thirty or forty days.

A salvage concern has been registered in London to be called the All Seas Marine and Salvage Co. The first directors are Mr. H. B. Sedgwick and Lt.-General Ed. Bethune. The capital of the company is £200,000, of which £190,000 are to be 8 per cent. participating preference shares.

The American military mission which has been in Silesia for the purpose of investigating the counterclaims of Poles and Germans regarding the nationality of the population, and also inquiring into general conditions there, has finished its labors and returned to Paris to report to the Peace Commission.

It is reported that the Allies in conference on Greek affairs debated the new situation to be created in Asia Minor, and that a general plan was adopted for the dissolution of the Ottoman Empire, the internationalization of Constantinople and the straits, the creation of a Turkish state in the center of Asia Minor, and the liberation of all nationalities from the rule of Turkey.

A threat of Irish opposition to President Wilson and to the ratification of the League of Nations in Congress was made in Paris on the 7th, by Sean O'Ceallaigh (John O'Kelly), the delegate of the provisional Irish Republic to the Peace Conference. He insisted that the Irish influence in the United States could stop ratification of the League of Nations in Congress.

Andre Tardieu, one of the French delegates to the Peace Conference, has stated that there will be no Prinkipo Conference; he said the Bolsheviki had failed to comply with the conditions laid down by the Entente as to a suspension of hostilities, and that the Allies have in view new methods of restoring order in Russia and are examining available means to carry out this purpose.

As nearly as can be estimated, the output of coal in Great Britain in 1918 amounted to 227,040,500 tons, being a decrease, compared with 1917, of 21,432,500 tons. Exports (including the coal equivalent of coke and manufactured fuel) amounted to about 35,000,000 tons, a reduction of 3,501,000 tons. Consequently, the balance left for home consumption (including foreign bunkers—about 8,908,500 tons) was 192,062,600 tons, being 17,909,400 tons less than in 1917.

With the Wits

Conductor (glancing at ticket offered)—We don't stop there. That's for the pawnbroker.—Awgwan.

"Say, Pa?" "What is it?" "If we take kitty on the boat, will we have to have nine life-preservers?"—Judge.

Guinea Hen—My singing evidently does not appeal to you? Robin—singing? Suffering cats! What you mistake for vocal cords is merely a filing device."—Buffalo Express.

"I wish I knew what I could use these tiny pieces of cloth for," mused the wife. "Make guest towels of them," observed the husband.—Life.

"Do you believe in prohibition?" "Believe in it!" echoed Uncle Bill Bottletop. "I've gotto believe in it. At present it's one of the most obvious facts in our community."—Dallas News.

Robert—Mother, was Robinson Crusoe an acrobat? Mother—I don't know. Why? Robert—Well, this book says that after he had finished his day's work he sat down on his chest.—Tit-Bits.

"You make life a burden to me," said the busy man to the persistent life insurance agent.

"In that case you can't take out this policy any too soon."—Louisville Courier-Journal.

"I can't see that giving the freedom of the city to a feller does him any good." "Didn't in the old days. Might amount to something in case of a man with a speedy automobile."—Louisville Courier-Journal.

Flannigan (listening to new jazz record)—What kind iv music de ye call that, Norah? Daughter—That's a fox-trot, daddy. Flannigan—An' how many tin cans did th' fox have tied to his tail when he throtted?—Buffalo Express.

"Do you find public office an easy berth?" "I shouldn't exactly call it a berth," said Senator Sorghum, thoughtfully. "It's more like a hammock; hard to get into comfortably and still harder to get out of gracefully."—Washington Star.

"What's coming off out in front there?" asked the proprietor of the Tote Fair store in Tumlinville, Arkansas.

"A couple of fellers from Straddle Ridge swapped mules," replied the clerk, "and now each is accusing the other of skinning him."

"Well, then, why don't they trade back?"

"I reckon they are both afraid of getting skinned again."—Kansas City Star.

SAN FRANCISCO

Taylor's Nautical Academy

Established 1858

Consular Building, Corner Washington and Battery Streets, Opposite New Custom House, San Francisco, Cal.

THIS OLD AND NOTEWORTHY SCHOOL is under the direct and personal supervision of CAPTAIN HENRY TAYLOR and equipped with all modern appliances to illustrate and teach any branch of Navigation.

The class of teachers of Navigation in the past have been those having simply a knowledge of Navigation, and Navigation only. Conditions have changed, and the American seamen demand a man as a teacher with higher attainments than one who has only the limited ability of a seaman. The Principal of this School, keeping this always in view, studied several years the Maritime Law, and is now, in addition to being a thorough teacher of Navigation and its kindred subjects, a regularly admitted Member of the Bar

There is no standard of education required of a pupil entering the School, for no matter how ignorant the seaman may be, even in the rudiments of common education, Captain Henry Taylor will teach and raise him from the depths of ignorance to the height of the average well-informed man, and in a comparatively short interval of time.

THE SEAMEN'S JOURNAL

FOR THE SEAFARING PEOPLE OF THE WORLD.
Official Paper of the International Seamen's Union of America.

A Journal of Seamen, by Seamen, for Seamen. Our Aim: The Brotherhood of the Sea. Our Motto: Justice by Organization.

VOL. XXXII, No. 31. SAN FRANCISCO, WEDNESDAY, APRIL 9, 1919. Whole No. 2533.

SEAMEN'S ACT CONSTITUTIONAL

Circuit Court of Appeals at New Orleans Decides in Favor of Seamen

Readers of the Journal will recall that the United States Supreme Court in the Dillon vs. "Strathearn" case, relating to the constitutionality of the Seamen's Act, dismissed the entire subject on a technicality. The Supreme Court apparently did not care to finally pass upon the case, perhaps in view of the negotiations of the Peace Congress or for other reasons. At any rate, the certificate which had presented the question of constitutionality was sent back to the United States Circuit Court of Appeals for the Fifth Circuit.

The latter court has now tried the case and decided all the constitutional points involved in favor of the Seamen, and it will be the law of the land unless the shipowners take it up to the Supreme Court of the United States. In other words, the Seamen have placed the shipowners in the vocative. They are now compelled to take it up themselves to the Supreme Court if they wish a reversal.

The opinion of the Circuit Court follows, in full:

Number 3140.

IN THE UNITED STATES CIRCUIT COURT OF APPEALS, FIFH CIRCUIT.

JOHN DILLON,

Appellant.

vs.

STRATHEARN STEAMSHIP COMPANY, CLAIMANT OF STEAMSHIP "STRATHEARN,"

Appellee.

Appeal from the District Court of the United States for the Northern District of Florida.

Silas Blake Axtell, L. W. Nelson, W. J. Waguespack, and H. W. Waguespack, for appellant.

J. E. D. Yonge (W. A. Blount, A. C. Blount, F. B. Carter, and Ralph Jas. M. Bullowa, on the brief) for appellee.

Frederick R. Coudert and Howard Thayer Kingsbury, specially appearing on behalf of the British Vice-Consul at Pansacola, Fla., as amicus curiae.

Before Walker and Batts, Circuit Judges, and Beverly D. Evans, District Judge.

WALKER, Circuit Judge:

This is an appeal from a decree dismissing the libel of the appellant, John Dillon, against the British Steamship "Strathearn" to recover the wages the libellant had earned as a carpenter on that ship prior to the date of his demand from the master of the ship, made two days after its arrival in the port of Pensacola, where the ship delivered cargo, of one-half part of the wages he had earned, which demand was not complied with. The action of the court was the result of its conclusion that the demand was prematurely made, having been made within less than five days after the arrival of the ship at the port where the demand was made, though no such demand had previously been made, and the appellant's service and the ship's voyage had begun several months before. The "Strathearn," 239 Fed. 583. The following is the provision of the Statute:

> "Every seaman on a vessel of the United States shall be entitled to receive on demand from the master of the vessel to which he belongs one-half part of the wages which he shall have then earned at every port where such vessel, after the voyage has been commenced, shall load or deliver cargo before the voyage is ended and all stipulations in the contract to the contrary shall be void; Provided such a demand shall not be made before the expiration of nor oftener than once in five days. Any failure on the part of the master to comply with this demand shall release the seaman from his contract and he shall be entitled to full wages earned. * * * And, provided further, that this section shall apply to seamen on foreign vessels while in harbors of the United States, and the courts of the United States shall be open to such seamen for its enforcement" Sec. 4, 38 St. 1165.

The provision that "such demand shall not be made before the expiration of, nor oftener than once in five days" is not to be given the effect of requiring that five days must have elapsed after the arrival of a ship at a port where it loads or delivers cargo before a demand for half-wages can be made with the effect given to it by the statute. Evidently the intention was that such a demand should not have the effect given to it by the statute if it is made within five days "after the voyage has commenced," or if made sooner than five days after the making of a previous demand contemplated by the statute. The appellant's demand was not premature.

The decree appealed from is sought to be sustained on other grounds, of which mention will be made.

It is contended that the appellant was not within the terms of the statute, because he was a British subject, who shipped on a British vessel in a British port. There is nothing to indicate that the word "seamen" in the clause, "that this Section shall apply to seamen on foreign vessels while in harbors of the United States," etc., was intended to include only seamen of this country, or that that clause was intended to have the same meaning it would have had if, instead of the word "seamen" the words "American Seamen" had been used.

Another clause in the same sentence—"and the courts of the United States shall be open to such seamen for its enforcement"—makes it quite plain that foreign seamen are within the provision. It cannot be supposed that the last-quoted clause would have been inserted if only seamen of this country had been in contemplation.

Legislation was not needed to open the courts of the United States to them. Provisions of the act looking to the abrogation of treaties containing provisions inconsistent with it are indicative of the legislative intention to make such provisions as the one in question applicable for foreign seamen while in the ports of the United States.

The circumstances that the title of the act shows that a part of its purpose was "to promote the welfare of American seamen in the merchant marine of the United States" is not indicative of an intention to make the provision in question applicable to American seamen only. It well may have been regarded that competition of American seamen in foreign ports with foreign seamen for service on foreign vessels would be hampered if in American ports only American seamen had the right given by the provision in question, so that on that ground the services of foreign seamen would be preferred by foreign vessels destined to American ports.

By the articles signed by the libellant in Great Britain he agreed to serve on a voyage not exceeding three years duration to any port or places within designated limits, which included ports of this country, for stated wages, which, less advances made, were payable on completion of the agreed service, which had not been completed when the demand for half of the wages earned was made.

In behalf of the appellee it is contended that if the provision in question is so construed as to be applicable to the case at bar, it is invalid on the ground that it is one not within the legislative power of the United States to make, in that it undertakes to nullify contracts entered into between foreigners in a foreign jurisdiction in which such contracts are valid and enforceable. The enforcement of the provision in question in behalf of a foreign seaman situated as the appellant was does not have that effect. From the fact that a contract is valid and enforceable in the jurisdiction in which it was made it does not follow that it is effective to govern the relations of the parties to it while they are in another jurisdiction with the law or public policy of which it is in conflict. A contract may be valid and enforceable where it was made, and yet be unenforceable in another jurisdiction. Union Trust Co. v. Crosman, 245 Fed., 412; The Kensington, 183 U. S.

The fact that the seaman and the vessel are British does not prevent the American law being applicable to them while both are in an American port. Patterson v. Bark "Eudora," 190 U. S., 169. The shipping contract would be given the effect of contravening a law of the United States if it were permitted to prevent the acquisition and exercise of a right given to "seamen on foreign vessels while in harbors of the United States" by a statutory provision the terms of which make it plain that the right is given notwithstanding any contract stipulation to the contrary. The Statute in question is

not given an extra territorial operation by according to it the effect of preventing the existence of a contract made in another jurisdiction from depriving a seaman who is a party to such contract of a right given to him by statute while both the seaman and the ship are within the territory of the nation the law of which gives the right.

The foreign contract does not prevent the relations of the parties to it being governed by the law of the place where the seaman and the ship are. The law of the place where the contract was made would be given an extraterritorial operation if it is allowed to determine the question of the enforceability of the contract in another jurisdiction, the law of which forbids the enforcement of such a contract.

Another question is that if the provision in question is held to be applicable to the facts of this case it is violative of the constitution of the United States in that it deprives a party of contract rights without due process of law. The statute does not purport to affect, and does not affect the rights of the parties under a contract made in a foreign jurisdiction, except to prevent such contract standing in the way of the enforcement of the domestic law in behalf of and against parties who have subjected themselves to the domestic jurisdiction. "It is a part of the law of civilized nations that when a merchant vessel of one country enters the ports of another, for the purposes of trade, it subjects itself to the law of the place to which it goes, unless by treaty or otherwise the two countries have come to some different understanding or agreement." Wildenhus's Case, 120 U. S., 1, 11.

A contract made in Great Britain for the services of a British seaman on a British vessel which goes to an American port is not so far effective as to be enforceable in the latter place if its enforcement there would result in setting at naught the law of that place. As the foreign contract is incapable of giving the right claimed by virtue of it, the statute in question cannot properly be regarded as depriving a party to the contract of a right under it, the right claimed not being one which was conferred by the contract or otherwise.

The obligation of a contract entered into in one jurisdiction does not extend so far as to entitle the parties to such contract to be exempt from the operation of the law of another jurisdiction to which they subject themselves, which law forbids such effect being given to the contract as is sought to be given to it in that jurisdiction.

In our opinion the provision in question is not invalid on either of the grounds urged against it.

The Court erred in dismissing the libel.

The decree appealed from is reversed.

A CHANGE IN FOOD-HABITS.

Our food-habits have been changing for the past forty years. Our dietary has become both more varied and more rational. Once we ate chiefly bread and meat; now we use quantities both of home-grown vegetables and fruits. The change has, of course, proceeded with exceptional speed during the past year, owing to the exigencies of war, and it is interesting to compare to-day's diet with that of a year ago. This comparison is made for us by Dr. Peter H. Bryce, chief medical officer of the Canadian Immigration Service, in a paper read originally before the American Public Health Association, at Chicago, and now printed in "The American Journal of Public Health" (Concord, N. H., February). Dr. Bryce recapitulates the steps by which it became evident to us that we must do our part toward feeding Europe, and reminds us how this knowledge has been made to react both on consumption and production; and particularly how it has changed our food habits during the year. He writes:

"We all know that none among us has suffered from a dearth of available food, although the poor may have been injured through high prices. It is, of course, true that some corn, rye, and barley have been introduced into our bread, some glucose into our sugar-supply, and some fish into our animal-food supply; but essentially we have not seriously shifted the movable weight on the food-balance so far as our necessary calories are concerned, except perhaps to lessen their excess. C. F. Langworthy, chemist to the Department of Agriculture, Washington, is quoted as saying that we ordinarily eat three times as much meat as we need, and that saving is possible is seen in the fact that Canada's excess-meat export last year, with fewer animals grown, was enough to feed 500,000 soldiers at the front.

"Now, with these facts before us, we naturally inquire what changes have taken place in our use of foods. All will at once turn to what he is personally cognizant of, viz., the war-garden. Professor Taylor, in illustrating the means by which hard-pressed Germany has been able to carry on, tells us that her population, through each urban dweller having been given a plot of suburban land to cultivate, have supplied at least 30 per cent. of the food necessary for their sustenance. How much this has meant will be understood when we remember that before the war 70 per cent. of the whole population in Germany was urban. Now, in less degree indeed, because the necessity has not been so pressing, all have turned to war-gardening in America. It is difficult to get complete statistics, because so many people have simply enlarged their previous former gardening, and these have been, of course, the most efficient. However, the Food Board of Canada reports an estimated total of 15,000 acres under cultivation in 1918, based on five times the acreage in 1917.

"In the Northern States and Canada undoubtedly the greatest increase has been in the potato crop. Germany, indeed, has long appreciated the value of this source of food.

"Fortunately, it is food so simply grown that many of the wage-earning class have been able to provide enough to supply their own household requirements, while, cooked in the usual way, it serves as the most important item in replacing our bread-supply.

"Incidentally, it may be stated that the use of the sweet potato and the banana in the South is in the same category, and, as Professor Prescott states, the banana at five cents per pound is, next to dried beans and bread, the cheapest food when measured in calories or fuel-value. But the war-garden has played a further use in its supplying food during the summer, from the earliest onions, lettuce, beets, peas, and beans, to the later corn, tomatoes, carrots, parsnips, and celery, all of which in succession have supplied material for canning and drying up to the needs of the many householders. In addition to home products, it is probable, too, that the output of the canning companies in these and other vegetables and fruits has been notably increased and will be made auxiliary, as canned goods, to the overseas supplies for the Army."

In addition to the war-gardens, Canada has seen during the year, Dr. Bryce tells us, a notable increase in the home consumption of fish. Possessed on both coasts of valuable fisheries, Canada until recently has allowed this source of food and wealth to remain undeveloped. To indicate how rapidly this source has been utilized, Dr. Bryce states that since the Food Board took up the matter seriously, the number of licensed wholesale fish establishments in Canada increased from 900 to 1,550, while 55 per cent. of the total Western fish catch was consumed at home as compared with 15 per cent. the previous year.

The highest spire in the world is that of Ulm Cathedral, which is 530 feet in height. It was completed in 1890.

UNCLE SAM'S BIG GAME HUNTERS.

Every small boy who owns an air-rifle will begin plans for the future when he hears that the United States Government actually employs keen-eyed followers of Daniel Boone and Kit Carson to shoot wolves, mountain lions, grizzly bears, and other marauding but interesting beasts. There is a permanent staff of between 250 and 350 professional hunters connected with the Biological Survey of the Department of Agriculture, and all that these fortunate woodsmen, plainsmen, and mountaineers have to do is to shoot the animals that prey on sheep and cattle in the Western States! "Think of being paid a salary to hunt big game!" enviously cries the editor of *Outing;* "that's our idea of a good job!" Since the fall of 1915, when this corps of hunters was organized, it has done considerable execution:

The bag includes 60,473 coyotes, 8,094 bobcats, 1,829 wolves, 201 mountain lions, and 137 bears. The Government receives a neat little income from the pelts, too. For one year's kill this amounted to about $100,000.

Let us see just what damage a predatory animal can do. Take, for example, the case of one Wyoming stockman. Last May two male wolves visited his ranch and got away with one hundred head of sheep and seven colts. Then they turned their attention to the rancher's neighbor and hit him to the tune of fifty sheep. A Biological Survey hunter ran the marauding pair down and killed them.

Here are the Government's estimates of the annual depredations among cattle and sheep by a single predatory animal: wolf, $1,000; stock killing grizzly bear, $500; mountain lion, $500; bobcat, $50; coyote, $50.

ELECTION EXPENSES.

This story of the election expenses of a Georgia man who was defeated for county commissioner in the recent primary reaches us by way of the Newark *Ledger* in a dispatch from Atlanta. His sworn statement runs:

Lost 1,349 hours sleep thinking about the election. Lost two front teeth and a whole lot of hair in a personal encounter with an opponent. Donated one beef, four shoats, and five sheep to a county barbecue. Gave away two pairs of suspenders, four calico dresses, $5 cash, and thirteen baby rattles. Kissed 126 babies. Kindled fourteen kitchen fires. Put up four stoves. Walked 4,076 miles. Shook hands with 9,508 persons. Told 10,101 lies, and talked enough to make, in print, 1,000 volumes. Attended sixteen revival meetings, and was baptized four different times by immersion, and twice some other way. Contributed $50 to foreign missions, and made love to nine grass widows. Hugged forty-nine old maids. Got dog-bit thirty-nine times, and was defeated.

"Conscription? Away with it! Misbegotten by a Prussian out of the cadaver of the old British Pressgang, that is the foul Dragon which is devastating Europe at this moment. Let St. George transfix *that* on the point of his spear, and the wars that may be will be clean wars, fought chivalrously by those who enjoy them! . . Kill Conscription and break the teeth of war."—General Sir Ian Hamilton, in *The Millennium,* a book discussing England's future military policy.

WEEKLY NEWS LETTER

Contributed by American Federation of Labor

Unemployment Insurance Opposed.

By a vote of nine to one British trade unionists representing 700,000 workers, affiliated with the General Federation of Trade Unions, declared against "any scheme of compulsory State unemployment insurance." This is the third time since December, 1916, that the unionists have taken this position. The last declaration was made at a special general council meeting held in London.

W. A. Appleton, Secretary of the General Federation, said:

"We have always been hostile to the State interfering too much in the affairs of trade unions. If the Government pays, the Government must control. I hope we will keep away from the Government and manage this matter of unemployment ourselves. There is no such thing on earth as a non-contributory scheme of insurance; you are bound to pay through taxation, and to pay at a much higher rate because of the cost of Government administration. If a man paid 3 pence per week to the trade union for unemployment insurance the union could beat the Government out of existence with the benefit it could provide."

T. F. Richards (boot and shoe workers) said these workers were brought under the compulsory act and that it was only by the threat of a strike that the Government exempted them. The speaker said that this union was giving the same benefits as the Government's, and at a less cost, besides retaining their liberty and avoiding Government interference.

Thomas Mallalieu (hatters) suggested that the Government assist workers into the trade unions, where they could handle their own affairs with more independence and greater economy.

G. Bailey (hosiery workers) said: "We are all against the Government scheme. We want to be let alone. We can give the Government benefit on less than our own contribution would be to their scheme, let alone what the State would get from the employers. We are going to give better benefits than the Government, and we are going to charge another one-half pence a week to pay for them."

J. W. Ogden (weavers) said that when members of that organization appear before Government officials for their unemployment insurance they "have to submit to having their credentials questioned and to being generally treated as though they were dishonest." The speaker ridiculed the theory that there can be such a thing as a non-contributing system of insurance. "The money has to be found by the workers, whether it comes from the Government or not," he said.

J. Crinion (textile workers) declared that the Government's plan "means nothing more or less than the setting up of a court of inquisition. The whole scheme is for no other purpose than the taking away of power from the trade unions and establishing it at Whitehall (Government's headquarters).

H. Boothman (cotton spinners) resented the "inquisitorial questions" of Government officials. "We are quite as strong in our opposition to any extension of compulsory unemployment insurance as we always have been," he said.

Other speakers opposed the plan of forcing trade unionists to contribute when they maintain unemployment benefits cheaper than the Government and at the same time are freed from red tape and officialdom.

Official Will Urge Needed Legislation.

Although Congress failed to act on the land reclamation proposal of Secretary of the Interior Lane, that official declares that this project, as well as others needed will be urged when the next Congress convenes. In a statement the cabinet official said:

"Congress adjourned without passing any of these important national bills:

"The appropriation of $100,000,000 for providing farms for returned soldiers upon our unused lands. This measure was reported into both houses, but never came to a vote. Twenty thousand soldiers and sailors have written me supporting it.

"The Smith-Bankhead Americanization bill, providing a method by which we can overcome illiteracy in the United States and give our 8,000,000 illiterates an opportunity to read the newspapers and the Constitution of the United States.

"A measure providing for the survey of the power resources of the east as well as the west, that our railroads, industries and cities may conserve fuel.

"The general leasing bill, under which withdrawn coal, oil, phosphate and sodium lands would be opened for development under a leasing system, which has been before Congress for five years and for which there is a strong majority in both houses, as shown by the fact that a similar bill has passed each house three times.

"The water power bill, which will prevent the use of water now running to waste in our rivers and induce immediate investment in 20 States in the construction of hydro-electric plants."

Autocratic Bosses Breed Revolution.

The autocratic attitude of men like J. Ogden Armour, Chicago meat packer, breeds a revolutionary spirit in this country, declared A. F. of L. Secretary Frank Morrison, in a statement on the strike of Kansas City (Mo.) street car employees. On two occasions this company has refused to accept decisions by the National War Labor Board and it declines to deal collectively with its 2,500 employees, who are now on the streets. J. Ogden Armour holds a majority of the stock of this company and Secretary Morrison said:

"This Kansas City situation illustrates the position of the American Federation of Labor on the question of social unrest: That the cause of this unrest must be removed, rather than rely on legislation and deportations.

"Mr. Armour and his associates bring joy to the heart of every believer in revolutionary methods. The revolutionist looks upon these business men as his best propa-

World's Workers

In the House of Lords on Feb. 19, 1919, Lord Islington urged the recognition of trades unions as part of the industrial machinery of Britain. They should be statutorily incorporated, be capable of suing and of being sued, and able to compel everyone in any trade to be a member of a union.

An agitation was raised in the House of Commons over the bill requiring compulsory military service. The Labor Party is opposing the bill, and Adamson, leader of this party, voiced this opposition by saying that free nations ought to be defended by free men, and not by men secured by compulsory military service.

Reports from England tell of the phenomenal increase in the unionization of farm workers. The membership of the Agricultural Laborers and Rural Workers' Union, which twelve months ago was a few thousand, is now over 100,000, and growing at the rate of 10,000 per month. When we find the farm workers of England waking up to their economic position there is still some hope for that country.

The names of the different political parties in Germany, as disclosed by reports of the recent elections, are puzzling. There is, for instance, the Christian People's party, which only succeeded in returning 87 out of over 400 possibilities, an indication that those who pharisaically label themselves are not popular in Deutschland. Then there were the "German People" candidates, of whom only 18 got home, and the Guelphs —presumably supporters of the Guelph family, of which England's Queen Victoria was a member—who scored only six representatives.

The British Labor Party Press Bureau, commenting on the appointment of a joint sub-committee of the parliamentary party and the national executive, to develop closer working arrangements between the two bodies, explains that the need for such co-operation has been deeply felt for a long time, and it is realized that the next election will very largely be fought upon the work of the party in opposition. The party, so far from being in any sense discouraged by the results of the last election, is taking up its work with enthusiasm and determination. Most of the members of the parliamentary party, though new to the House of Commons, are experienced trade union administrators, and by no means amateurs in debate.

Commenting on the firemen's quarters on the "Niagara," in the Epidemic Inquiry which is proceeding at Auckland, New Zealand, Dr. Russell, port health officer, said "it was a wonder that those who were ill there were alive. Had the disease been dreadfully contagious, he would not have expected to find anyone who occupied those quarters alive. The stewards' quarters were not quite so bad." The Queensland Worker, in commenting upon this inquiry, says: "We would like to hear Dr. Russell's opinion on the quarters of the crew on the coastal steamers of Australia. An inspection thereof would open his eyes to the overcrowded and unhealthful conditions under which the seamen and firemen eat and sleep and spend their off-duty hours."

STATEMENT OF THE OWNERSHIP, MANAGEMENT, CIRCULATION, ETC., REQUIRED BY THE ACT OF CONGRESS OF AUGUST 24, 1912,

of The Seamen's Journal, published weekly at San Francisco, Cal., for April 1, 1919:

State of California,
County of San Francisco—ss.

Before me, a Notary Public in and for the State and county aforesaid, personally appeared S. A. Silver, who, having been duly sworn according to law, deposes and says that he is the Business Manager of The Seamen's Journal, and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management (and if a daily paper, the circulation), etc., of the aforesaid publication for the date shown in the above caption, required by the Act of August 24, 1912, embodied in section 443, Postal Laws and Regulations, printed on the reverse of this form, to wit:

1. That the names and addresses of the publisher, editor, managing editor, and business managers are:

Name of— Postoffice address—
Publisher, Sailors' Union of the Pacific, San Francisco, Cal.
Editor, Paul Scharrenberg, San Francisco, Cal.
Managing Editor, Paul Scharrenberg, San Francisco, Cal.
Business Manager, S. A. Silver, San Francisco, Cal.

2. That the owners are: (Give names and addresses of individual owners, or, if a corporation, give its name and the names and addresses of stockholders owning or holding 1 per cent. or more of the total amount of stock.)

Sailors' Union of the Pacific, San Francisco; not a corporation. Principal officers of the Sailors' Union: Andrew Furuseth, Secretary, San Francisco; John H. Tennison, Assistant Secretary, San Francisco.

3. That the known bondholders, mortgagees, and other security holders owning or holding 1 per cent. or more of total amount of bonds, mortgages, or other securities are: (If there are none, so state.)

None.

4. That the two paragraphs next above, giving the names of the owners, stockholders, and security holders, if any, contain not only the list of stockholders and security holders as they appear upon the books of the company but also, in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting, is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bona fide owner; and this affiant has no reason to believe that any other person, association, or corporation has any interest direct or indirect in the said stock, bonds, or other securities than as so stated by him.

S. A. SILVER, Business Manager.

Sworn to and subscribed before me this 27th day of March, 1919.
(Seal) MARGUERITA S. BRUNER.
(My commission expires Jan. 8, 1922.)

Pacific Coast Marine.

A new innovation is to be introduced on Rogue River at the opening of the fishing season, April 15, in the form of a floating cannery. The project will be inaugurated by the B. A. Seaborg Cannery Company.

By the launching at Seattle, on April 3, of the 4200-ton barge, "Ahmik," the Allen Shipbuilding Company is the first wooden shipbuilding concern in Seattle to complete its launching program for the Fleet Corporation.

Monthly freight service between Portland and the Far East was promised by A. F. Haines, vice-president and general manager of the Pacific Steamship Company, providing the Government will release to the company two more steel ships.

The Canadian Pacific steamship "Princess May" has been sold to Ecuador interests. She was built in 1888 at Newcastle yards of Hawthorn, Leslie & Company, Ltd., and was formerly known as the "Ningchow" and "Haiting," at which period of her career she was plying in the Chinese coasting trade.

The launching, during the week, of the wooden steamer "Aburia," thirty-first hull of the Grant Smith-Porter Shipbuilding Company at Portland, Or., marked the final launching from this yard, at least under its present management, of a steamer. Three more hulls are on the ways, but one is cancelled and the other two have been ordered converted into barges.

Plans for bringing thousands of tons of Australian wool to San Diego on United States Shipping Board vessels for transshipment to Eastern mills, were announced during the week. The first vessel will arrive at San Diego in May from Melbourne with 6000 tons. Lack of available warehouse space will prevent more than two wool-carrying ships being handled a month, it is said by the port authorities.

Chief Engineer Joseph Raymus of the Key Route ferryboat "San Jose," which was burned on March 23, was suspended for six months by Inspectors of Hulls and Boilers Captain James Guthrie and Joseph Dolan. The inspectors also suspended for thirty days the license of Captain Robert Ferguson of the Shipping Board steamer "Nupolele," for negligence in connection with a collision between his vessel and the tug "Samson."

The destroyer "Boggs," completed at Mare Island, Cal., and launched during April of 1918, smashed all previous records for the cruise from Mare island to Newport News, Va., by making the trip down the Coast, through the canal and up the Atlantic Seaboard in twelve days, according to official announcement. The best previous record was fourteen days. The "Boggs" was in command of Commander H. V. McKittrick.

A. O. Anderson & Co., consignees, have received a report that the schooner "Elsie," now en route to the Columbia River from Tonga Island with a cargo of copra, had met with a misfortune and had been compelled to put in at Wellington for repairs. During heavy weather the vessel's forestays were broken, it is said. The "Elsie" is bringing 890 tons of copra, and she is expected to reach the Columbia River by the end of May.

Five fishing launches put in at San Francisco during the week from Puget Sound. They were en route to San Pedro. The vessels are operated and manned by Slavonians, and will enter into competition in Southern California waters with Japanese and Italian fishing boats. The 60-foot launches are the "Alameda," "Sunset," "Explorer," "Tacoma" and "La Touche." They made the voyage here from Puget Sound in 100 hours under their own gas.

The port of Astoria commission has awarded a contract to the J. A. McEachern Company to construct an extension of the east end of the warehouse on pier 1 of the port dock. The contract price is $33,775. The commission also tentatively approved the plans for the construction of pier 3 and warehouse, the estimated cost of which is $981.600. Provision is made in these plans for a 15,000-ton dry dock to be located at the head of slip 2.

The Coggeshall Launch Company has been authorized by the State Railroad Commission to increase its monthly rate for carrying passengers from Eureka to Samoa, Humboldt county, from $1.75 to $2. The company showed that last year the cost of operating the steamer "Antelope" on the Eureka-Samoa route was $2820 in excess of receipts. The new rate, it is estimated, will give the company a net profit of 5.4 per cent. on the cost of this vessel.

Sudden & Christenson's suit against the British Government to establish the local firm's ownership in the steamer "Edna," formerly the "Mazatlan," has been decided by the English courts in favor of the American steamship company, say private advices received from London during the week. The amount of the award was not stated. The "Mazatlan," which was used to coal german warships on the Pacific, passed into the possession of Sudden & Christenson, who sold her to Norwegian parties for $252,000. Before the vessel could be delivered she was seized by the British Government.

Lumber shipments from the Columbia river during the month of March were unusually light. Figures compiled by Deputy Collector Haddix show that twenty-one vessels loaded at the mills in the lower river district during the month and their combined cargoes amounted to 15,663,000 feet of lumber. Nineteen of these vessels, carrying 14,363,000 feet, went to California points, while two vessels laden with 1,300,000 feet are en route to foreign ports. In the same period five vessels loaded with 2,800,000 feet in the upper river district, making a grand total of 18,463,000 feet, that left the Columbia river in cargoes during the last month.

Captain T. P. H. Whitelaw, the wrecker, returned from Eureka during the week and announced that there is no possible chance left for salving the ancient wreck of the steamer "Corona." During the long years the derelict has reposed north of the jetty at the entrance of the Humboldt bay the sand has settled all about, and the decks are now submerged with this substance to the depth of at least seven feet. The machinery and equipment have rusted away and would be worthless if salved. It has been decided to let the old craft remain in the self-made grave, for the owners believe that if Whitelaw cannot save anything worth while it is useless, as a rule, to consult others.

United States customs and postal inspectors at Honolulu are co-operating with Japan in censoring all news from the Orient, according to information received at San Francisco. Passengers arriving at Honolulu, en route to San Francisco, are required by the officials to declare whether or not they carry any letters for mailing or delivery in the United States. If the letters have been passed by the Japanese censors they may be retained; otherwise they must be given up. No explanation for the action of the Federal officials was made. Many of the passengers on the "Shinyo" said that although they did not have any letters coming under the ban, they did not relish the idea of Uncle Sam's men contributing their services to Japan in keeping authentic news of conditions in the Far East from the United States. No explanation was ventured by any of the Japanese on board.

In addition to the twenty wooden steamers chartered by the Charles R. McCormick Company to carry railway ties from this Coast to the Atlantic, announcement was made that fifteen more vessels had been chartered for the same purpose. The charter rate is $16 a thousand feet, board measurement, and each vessel will carry 1,500,000 feet. It is said that the Government has use for the vessels on the Atlantic side, but if not, the local concern will be glad to have them return and additional tie cargoes will be provided for as many ships as can be spared by the Shipping Board. There is a possibility that an arrangement will be made to send wooden steamers back to the Pacific laden with Eastern coal. This class of fuel has not been shipped to San Francisco for a number of years, and the coal interests here are keen for a chance to secure a supply. With the increase of the Navy units here, the supply of good coal will have to be augmented by the Eastern fuel, and it is probable that some arrangement will be made to utilize the wooden steamers for this purpose. It is known that the coal interests have made a number of offers to the Shipping Board, but the charter rate has not been attractive enough to warrant a deal.

In a dense fog the American bark "Albert," in the morning of April 2, struck on a submerged reef eight miles north of the Point Reyes lighthouse and a mile and a half from shore. Captain H. O. Uhlberg of Alameda, master of the vessel, was drowned. The eleven men of the crew, all San Franciscans, reached shore, exhausted. The $60,000 vessel and her $100,000 cargo of leather and tallow are believed to be a total loss. The "Albert" was a three-masted bark of 624 tons net register. She was ending a voyage from Timaru, New Zealand, having sailed from there January 25. According to the latest information the vessel is actually breaking up. This was learned when the Peterson tug "Chief," Captain A. L. Barker, steamed to the scene with Captain E. L. Smith, who represented the underwriters, and Captain Edward Weider, superintendent of the Peterson Company. Ned Olson of Olson Brothers, owners of the "Albert," also went to Point Reyes. The 800 tons of tallow, which constituted the cargo of the "Albert," is largely scattered about the beach, and there will be considerable salvage. It will be necessary to collect the tallow and haul it over the roads and mountain. The salvage may cut the cargo loss of about $100,000 in half. It was fully insured. The body of Captain H. O. Uhlberg has not been recovered.

F. R. WALL, who was for many years an officer in the United States Navy, is now practicing marine law in San Francisco. He gives claims of all seafarers careful attention. 324 Merchants Exchange Bldg., 3rd Floor, California St., nr. Montgomery. Phone, Sutter 5807 (Adv.)

The Seamen's Journal

Published weekly at San Francisco
BY THE
SAILORS' UNION OF THE PACIFIC

Established in 1887

PAUL SCHARRENBERG.....Editor
S. A. SILVER.....Business Manager

TERMS IN ADVANCE.
One year, by mail - $2.00 | Six months - - - $1.00
Advertising Rates on Application.
Business and Editorial Office, Maritime Hall Building, 59 Clay Street, San Francisco. Telephone Kearny 2228.

Changes in advertisements must be in by Saturday noon of each week.

To insure a prompt reply, correspondents should address all communications of a business nature to the Business Manager.

Entered at the San Francisco Postoffice as second-class matter. Acceptance for mailing at special rate of postage provided for in Section 1103, Act of October 3, 1917, authorized September 7, 1918.

NOTICE TO CORRESPONDENTS.
Communications from seafaring readers will be published in the JOURNAL, provided they are of general interest, brief, legible, written on one side only of the paper, and accompanied by the writer's name and address. The JOURNAL is not responsible for the expressions of correspondents, nor for the return of manuscript.

WEDNESDAY, APRIL 9, 1919.

GATHERING HEADWAY.

Yep, that's what our new merchant marine is a-doing; gathering headway. The wind is hauling aft all the time, and your Uncle Samuel is giving her sheet. A few years more at the present rate of progress and we'll have a merchant marine that will make John Bull's outfit in that line look like the proverbial thirty cents.

If you don't believe that, just ask Chairman Hurley of the United States Shipping Board.

"In America you hear much about British competition," said that gentleman after his return from Europe. "In Great Britain I heard a great deal more about American competition."

Anyway, for the first time in fifty years the Stars and Stripes are again waving from the mizzen peaks and fluttering over the taffrails of American ships on all the seven seas. Ports that haven't been visited by an American ship since the days of the famous Yankee clippers have once more been invaded by Uncle Sam's handsome, up-to-date packets. From 60° North to 60° South, and clear around the world, their keels are now traversing Old Briny. To all the ports in Europe, to Africa, Asia, Australia and South America, the Shipping Board has opened trade routes. And everywhere our ships have been welcomed.

When the Shipping Board first took the public into its confidence and revealed its stupendous shipbuilding program, it was freely predicted by the doubting Thomases that it would not be possible to induce American boys to take to the sea in any considerable numbers. Americans aren't a seafaring people, they pointed out.

But, they reckoned without the Seamen's Law, foremost among Americanizing agencies. In the single year that the Shipping Board has maintained training ships for recruits, 39,000 young Americans have applied for sea training. And—get this straight—half of them wanted jobs as firemen! All of which bears out the oft-repeated contention of those who framed the Seamen's Law; to wit, make conditions of seafaring conform to twentieth century conceptions of civilization, and the American boy will again take to the sea even as his forbears of old did.

Indeed, so far has the Americanization of the personnel of our new merchant marine already proceeded that no recruits are now accepted on the Shipping Board's training ships unless they are American citizens. At that the Board estimates that 69,000 will be needed to man the ships coming out in 1919 alone, and is confident of getting them.

The American merchant marine now represents one-fifth of the world's sea-going tonnage. At the outbreak of the war in 1914, ships under the American flag carried only 10 per cent. of the exports and imports of this country. To-day American merchant ships comprise 46 per cent. of all shipping plying between the United States and foreign ports.

To be a little more specific: Seven hundred and fifty-two vessels, aggregating 1,961,839 tons, are now employed in overseas service under the American flag. Seventy per cent. of these ships are owned by the Government. This fleet is made up of 351 freighters, 84 freight and passenger vessels, 3 refrigerator ships, 7 freight, passenger and refrigerator ships, 6 colliers, 71 steam tankers, and 230 sailing vessels.

In addition to this fleet, the army and navy are operating 353 ships belonging to the Shipping Board, with a total tonnage of 1,873,581. When these ships are returned to the merchant marine it will have 1105 ships on salt water.

The 752 vessels mentioned and classified above are distributed on the following trade routes:

Africa, 38; England, 13; France, 23; Belgium, 4; Italy, 25; Switzerland, 1; Spain, 3; Portugal, 7; Mediterranean ports, 9; Sweden, Norway, Denmark and Holland, 3; Eastern Asia, 49; East Indies, 5; British India, 3; Australia, 71; Hawaii, 17; Amazon River, 27; Central Brazil, 44; River Plate, 39; West Coast of South America, 70; West Indies, 168; other Caribbean ports, 63; Mexico, 44; Alaska, 14; Canada, 12.

Yes, take it by and large, the building and manning of our new merchant marine is an achievement of which Americans may well feel proud. And only a beginning has been made so far. When the shipbuilding program of the U. S. Shipping Board has been carried out in its entirety our status as a maritime nation will be that of undisputed mistress of the seas. For it goes without saying that by then we shall also have the biggest and most powerful navy afloat.

SAILORS' WIVES.

Remember the old song, Bill, "A sailor's wife a sailor's star should be, his star should be, his star should be," etc.? And how sentimental we used to get when "Chantey" Bob sang it in a rolling bass voice that shook the roof beams of the forecastle and rattled the tin pannikins stowed away in the spare bunk?

Well, the board of directors of the Venice (Cal.) chamber of commerce proposes to go "Chantey" Bob one better, and—but let the gentlemen speak for themselves.

Showing a most commendable disposition to take an interest in the problems of human relations, the aforesaid board recently issued a circular setting forth the need on shipboard of improved sailors' quarters. The board modestly refrains from tackling the "larger features" of the question, stating that "we only take courage to present the following minor points as being of possible advantage in dealing with labor of sailors:

No. 1.—The accommodation of sailors in freight ships are without privacy or convenience. The bunks are all together and in restricted quarters. There is no possibility in them of making a "Home Feeling" such as was accomplished by the sailors in the dugouts and ditches of France during the World War.

The improvement suggested that follows is based on the observation of the men studying navigation to become officers and while acting as regular sailors on freight boats to secure sea experience.

The improvement suggested is that the sailors be provided with cabin quarters for not to exceed two men in each one. The advantage to be expected by this is the greater permanence of the sailor crews on the ships. The fact observed was that the sailors were constantly leaving a ship on reaching port with the equally constant need of securing new men not known to the officers. Besides this, ships have individuality and peculiarities that a crew learns. A crew acquainted with a ship can render better work than one not known to the officers and not knowing the ship itself.

That the cabin arrangement would diminish this constant change of sailors now so general, is shown by the crews of firemen on the ships reported on. These crews had cabins for two men to each cabin. These cabins were found to have pictures and other things showing the presence of a "Home Feeling." The firemen crews reported on stuck to the ship where sailors changed. The cost of such additional space and accommodation on a freighter, it was reported, would be negligible.

The increased interest of the sailor in the ship he is working on by the proposed change, it is believed, would increase his efficiency to an appreciable extent. We must rely on increased efficiency to offset high labor cost.

No. 2.—The least attractive forecastle sailor quarters reported on were found on Government transports. These had the regulation cubic air space provisions, but otherwise lacked privacy and conveniences. The difference between a freighter and a war vessel seemed to be quite lost sight of in arranging the crew accommodations on the freighter.

No. 3.—The suggestion was added that provision be made for sailors to take their wives or female relatives on ship board with them and to employ these when possible in some of the ship work. We have no comment to make on this proposed radical departure from western custom. It may be entirely impractical. On the other hand, women do travel and work on ships but not with western sailors. Women are carried on ships as passengers and on such ships are also employed.

Rafts going down our great rivers have had an entire family on the voyage. In the East, and especially in China, the small boats often house men's families. On our sea-going freight vessels the captains are the only ones whom we can find taking their wives and occasionally their families with them. Women passengers are, however, at times carried on freight boats.

The advantage in securing interest and efficiency in the crews by the changes suggested, might not be experienced. We merely report the idea as being possible in harmony with the modern demand for Women's Rights.

In the classical language of "Lowbrow" Mike, whadda you know about that, Bill? Going off on a long cruise and taking wifie and the kids with you just like a canal boat skipper—wow! There sure is some class to that proposition.

"Home feeling!" Well, we should snicker. Happy in the bosom of your family, and, figuratively speaking, sitting beneath your own vine and fig tree, you wouldn't care a darn how hard the winds blew or how much the old hooker wallowed around in the trough of the sea. Life would be just one blessed feast of love after another.

And, by way of varying the monotony of too much connubial bliss, there would be the curtain lectures awaiting you when coming off watch at night. Perchance, also, wifie might on occasion shy a rolling pin or piece of crockery ware at your unoffending head, like Maggie does at Jiggs in "Bringing up Father." Oh, aye; a life on the ocean wave, and being rocked in the cradle of the deep, would assuredly have no terrors for the lucky guy whose sea stock comprised a loving and devoted wife.

And, of course, when it becomes a settled policy for sailors to get married and take their wives to sea with them, the old gag about Jack having a wife in every port

won't have a leg to stand on. Trust the seagoing wives to see to that. And as for hubby flirting with mermaids—well, really, we wouldn't want to be in hubby's place if caught at it. No, sirree; safety first. And safety first demands that "a sailor's wife a sailor's star should be."

BOOSTING THE SEAMEN'S ACT.

The following resolution (Assembly Joint Resolution No. 7) was recently adopted by the California Legislature:

Whereas, It is now thoroughly understood that the lack of an adequate merchant marine was one of the important contributing features to the failure of the United States to secure for itself a proper share of the foreign trade of the world before the outbreak of the world war; and

Whereas, The United States now has the opportunity to secure a greatly increased foreign trade through the development of our merchant marine; now, therefore, be it

Resolved by the Assembly and the Senate, jointly, That the Legislature of the State of California memorialize the Congress of the United States for the extension and development of the merchant marine of the United States until it shall become the greatest of any nation in the world, to the end that the manufacturers of these United States shall be encouraged to seek the widest of world markets for goods made in the United States of America; and be it further

Resolved, That the Congress of the United States be further memorialized to the end that all of the working conditions of the employes of the merchant marine of the United States, including quarters, food, wages, safety provisions, training, etc., shall be maintained at a standard at least equal to and not lower than that established by "An act to promote the welfare of American seamen in the merchant marine of the United States and to abolish arrest and imprisonment as a penalty for desertion and to secure the abrogation of treaty provisions in relation thereto; and to promote safety at sea," which became a law March 4, 1915, commonly known as the "Seamen's Act of 1915"; and be it further

Resolved, That the Senators and Representatives in Congress from the State of California be requested to use all honorable means to secure the action desired in this matter for the purpose aforesaid; and be it further

Resolved, That a copy of these resolutions be forwarded by the chief clerk of the Assembly to the President and Vice-President of the United States, to the members of the Cabinet, and to each of the Senators and Representatives in Congress from the State of California.

Bully for the Sacramento solons! In adopting the above resolution they rendered a service to American seamen—aye, to the seamen of the world—which can hardly be overestimated. The Seamen's Act just now is being attacked on all sides, and by some of the most powerful interests in the world. All the Captain Dollars of America and Europe have had their lobbyists haunting the peace conference in Paris for months past seeking to have the Act "modified" to meet their own views as to what constitutes "sailors' rights." For four long years it has been lambasted and manhandled by the reactionary press and politicians till it's a wonder there's a whole bone left in its body. Most timely, therefore, is the California Legislature's resolution. Coming, as it does, from a responsible body of men, the lawmakers of one of the sovereign States of the Union, it will strike the ranks of the seamen's enemies with all the heft and deadliness of a broadside from a super-dreadnaught. Again we say to the gentlemen in Sacramento, bully for you! May your fame spread to the utmost confines of this mundane sphere.

"In the sweat of thy brow shalt thou eat bread." Yet there are millions of people in the world right now who can't get bread even at that price. Verily, our "Christian civilization" comes high, but we must have it.

When in doubt, buy a Victory Bond.

MODERN TRANSPORTATION.

A Review of the Long Interval Between the Galley of the Dim Past and the Submersible Ship of Today.

The successful navigation of the Atlantic by the submarine "Deutschland" in the months immediately preceding the declaration of war against Germany by the United States appears to have been one of those performances of moderns which has absolutely estopped the classical sharp who finds a foreshadowing of every occurrence of today in the pages of some writer of the past from pointing out that Archimedes or some other ancient worthy had got hold of the idea, but was unable to give it practical effect for some unexplained reason or other.

It is certainly astonishing how near the ancients got to some great discoveries without actually arriving. A consensus of intelligent modern opinion would attribute their failure to their marvelous lack of exactitude. Men with minds of unmatched brilliancy permitted their imaginations to soar into regions where they saw the light, but when they emerged they refused to descend to the drudgery of finding the proof to support their visions. And thus it happened that it was reserved for moderns to make great discoveries, many of which have resulted in material achievements of such magnitude that contemplation of them has created a disposition to underrate the accomplishments of the past.

This tendency is more manifest when the subject of transportation is under consideration than at any other time. The exploits of submarines, the marvelous performances of "ocean liners," the rapidity with which land surfaces are passed over, the flights of airships have taken such complete possession of the modern mind that we are inclined to think with contempt of the means adopted by the ancients to get about, and incidentally to underrate their commercial activities. But there is plenty of evidence which proves conclusively that they did get about, and that their facilities for doing so were abundant and of a sort far exceeding in convenience, luxury and in every other particular anything enjoyed by the inhabitants of the modern world until the nineteenth century was well advanced in years.

The most of us are so accustomed to forming our judgments upon impressions derived from reading a story, or from fugitive references to ancient practices, we are apt to go astray. This disposition accounts for the fact that we can hardly conceive of the people of antiquity navigating the seas whose shores they inhabited otherwise than in ponderous galleys, laboriously rowed by slaves or prisoners. Yet it is easily established that there were regular lines of fast sailing packet ships, some of them fitted up luxuriously and capable of carrying cargoes, not as great as some of our ocean craft are able to handle, but enormous by comparison with those transported by the biggest vessels sailing the Atlantic 300 years after the discovery of America by Columbus.

The statements made by the classic writers concerning some of the big ships of antiquity were discredited, or at least lightly passed over, by historians of the eighteenth century. Their doubts were caused by their environment. Had they lived in our time and seen vessels over 900 feet in length, propelled by engines developing 80,000 horsepower, they would not have received with incredulity the statement of Callixenus that Philopater built a ship 470 feet long and with 64 feet beam. There are some details given calculated to excite surprise, as, for instance, that the ship had two heads and two sterns and seven beaks, one of which was larger than all the rest, and that she carried 4000 rowers and 400 supernumeraries, and on her deck 3000 marines, and in addition a large body under the decks and a vast quantity of provisions and supplies.

The statements concerning the motive power of these big vessels, for others are minutely described, have always puzzled modern shipbuilders. If they were only made by one or two authors they might be treated as fabrications, but writers as serious as Pliny tell us of ships with as many as forty banks of oars. McPherson, who wrote of the commerce of the ancients about the time Adam Smith was producing his "Wealth of Nations," tells of an experiment made in the neighborhood of London with the view of determining how many banks of oars could be operated, and the conclusion was reached that more than three would be impracticable. They gave the riddle up and left their contemporaries free to believe or reject authorities whose veracity is not subjected to challenge when they are speaking about things we understand.

Concerning the appointments of some of these big ships we have detailed information. One of them is described as having banqueting and sleeping rooms, with corridors on the outside running the length of the vessel and walled in with walls and windows on all sides. Evidently as much attenton was paid to decoration as is bestowed upon the most luxurious of Atlantic liners. Archimedes is credited with having launched a ship built for Hiero whose

(Continued on Page 11.)

OFFICIAL.

SAILORS' UNION OF THE PACIFIC.

Headquarters, San Francisco, Cal., Apr. 7, 1919.
Regular weekly meeting came to order at 7 p. m., O. B. Holmberg presiding. Secretary reported shipping fair. Shipwreck Benefit was paid to fifteen members of the crews of bark "Albert," "Aryan" and schooner "Kitsap." The Quarterly Finance Committee reported having examined the Union's accounts for the past three months and found same correct.

DIED.

Hartvig Hansen, No. 2464, a native of Norway, age 33. Died at sea, Oct. 4, 1918.

Johannes Helin No. 1933, a native of Finland, age 32. Died at San Pedro, Cal., April 4, 1919.

Claus Ludvig Larsen, No. 1570, a native of Norway, age 38. Died at San Pedro, Cal., March 25, 1919.

John Mathews, No. 1240, a native of Ireland, age 36. Died at San Pedro, Cal., May 12, 1918.

Herman A. Ross, No. 943, a native of Germany, age 35. Died at Levuka, Fiji, Dec. 17, 1918.

Leonard Virtanen, No. 366, a native of Finland, age 25. Died at San Francisco, Cal., April 2, 1919.

OUR WASHINGTON LETTER.

(By Laurence Todd.)

A blow at the organized seamen, and indirectly at the organized workers in the railroad and harbor transport industries, has been struck by Edward N. Hurley, chairman of the Shipping Board, in his demand that the new billion-dollar merchant fleet, owned by the Government, shall be sold out at a sacrifice to private operators.

Hurley, who used to be president of the Illinois State Manufacturers' Association, has never shown any especial friendship for organized labor. Victor Olander, secretary of the Illinois State Federation of Labor and head of the strike committee of the seamen on the Great Lakes, compelled Hurley last year to admit that he had wholly misrepresented the situation when a strike was pending, and Hurley hastily retreated from his attack on the Seamen. Next thing the sailors heard from the Shipping Board chairman, he was sailing for Paris to arrange a scheme of uniform wages which should govern the seamen of the world. Andrew Furuseth was so suspicious of Hurley that he went right over to Europe to tell organized labor's side of the story. He is still there.

Now Hurley returns, and tries to drug the organized workers by declaring that wages cannot be lowered. He explains that American labor, on American ships, is highly efficient. Everyone knows that to be the case. Then, when he imagines the unions are calling him their best friend, he shows his hand. He proposes that the Government sell its ships at a tremendous financial loss, to private shipping companies. He proposes that Government insurance of ships be abandoned, so that private insurance, which costs more, shall have the entire field. And he proposes that the Government shall carry most of the risk of the enterprise, while private companies get the profits!

Nothing would please the enemies of public ownership of railroads more, just now, than to have Hurley put this scheme through. If the Government runs its own ships, and makes a good profit—which it has done in the case of the line from Panama to New York, owned and operated by the Panama Canal Co., a Government institution—then it will be difficult for the profiteers to prevent the people from taking over the railroads, too. Government ships, operated as an extension of Government railroad lines, would give a special advantage to the merchant fleet on the one hand and the railroad service on the other.

But there is something more than that involved. Business circles are disturbed by the railroad workers' plan—the Plumb plan—for democratic control and operation of publicly owned railroads. Suppose the railroad workers and the dock workers and the seamen, organized solidly, should come to control the operation of the entire transportation system. Where would most of our big profiteers get off? Where would they land, if this management should begin to suggest to Congress a Priority Board program to enforce better industrial conditions? Suppose a Transportation Priority Board should urge Congress to permit it to hold up shipments designed to lower the standard of living in the mining industry, for example: shipments of scab-mined ores or coal. Business men are looking ahead, and are even more frightened by "democratic control" than by "public ownership" as a labor slogan.

E. T. Gundlach, chairman of a special commission of American employers sent to Great Britain recently by the Department of Labor to study industrial relations, has just returned. He says that the demand of the British coal miners and railroad employes for the nationalization of those industries is an issue wholly apart from unemployment or wages or hours. The British government is now paying a very liberal unemployment benefit to every man who is looking for a job, but this bounty will come to an end within a few weeks, and then there will take place a much more dangerous crisis than any that has yet been met. When England faces widespread unemployment, social discontent and an absence of unemployment funds, the agitation over the possession of the big industries will be more than a mere discussion of principles.

Gundlach found the employers in England and Scotland convinced that they would have to recognize the trade unions, and that the organized workers would steadily increase their power in the industries. He said that American industrial history had in general followed the lines laid down by British experience. That fact led him to believe that American employers would come to see that labor was permanently organized and must be dealt with on that basis.

While our own Government has abandoned four-fifths of the United States Employment Service, at the very crisis of our unemployment period, Britain has made its official work on unemployment one of its chief concerns. For example, men in the engineering and machine trades, for whom the getting of jobs is now most difficult, are being held in the army, while men from other lines where conditions are better are being demobilized. One of the problems that Parliament must solve is the low wages in domestic service—so low that a girl gets more money while unemployed, from the government unemployment fund, than when working in a household.

Up in New York a number of labor organizations with 200,000 local membership have formed the United Labor Education Committee, in order to furnish the working people of the city such opportunities to enjoy good drama, music and pictures, as well as science, that they will begin at once to taste some of the fruits of industrial democracy.

They have established four centres, at each of which they give a series of lectures. With each lecture there is at least one musical selection by a first-class artist. Their Section on Music is in charge of Josef Stransky, conductor of the Philharmonic Orchestra. Moving pictures are shown—the best pictures dealing with natural science that can be secured.

Just now these discontended workingmen are selling the first series of tickets for the Workmen's Theatre, which is to furnish three plays for $1.50. A stock company of first-class actors and actresses is being formed from among the thousands in New York who are interested in this project of the workers to create their own decent artistic standards. A theatre has been secured. Ten thousand tickets will be sold. The Workmen's Theatre company will play two nights a week for the workers, at almost no charge, and will play five nights in one of the ordinary theatres, by an arrangement made by the art director of the Frohman circuit.

Selection of seats will be made by drawing numbers from a big bowl, or rather from one of three bowls, according to whether the party going together is to be one, two, or more than two. You may draw the second balcony or a box—all for the same price!

The United Labor Education Committee is stirring up further discontent, of course. It is making many thousands of trade unionists discontented with a scale of living which makes Charlie Chaplin the greatest actor within their reach, the organ-grinder their acme of musical treat, and the boss in the factory the final authority in science and political philosophy. They have actually grown so bold as to want good etchings instead of Sunday-supplement chromos in their home. An etcher is arranging to give them a lot of fine work, in series larger than the rich have ever bought, at $2 a picture instead of the usual $25 to $30.

All these new activities take money. They mean more demands in wages, more determination to raise the living standard. From the standpoint of the average employer they are damnably seditious.

Yet they are a pretty sane and sensible preparation for the conditions that our Peace Conference Labor Commission is promising. We are told that even the Italian government, and the Japanese and Chinese, now believe that they can find some way to bring their wage conditions and the standard of living of their workers to a level somewhere near the average level of the workers in Europe. When the governments send their delegates to Washington this fall, to the official launching of the work of this Labor Commission, we shall see plans presented that will at first make us imagine that we are dreaming of the labor millennium of the Orient. The radical plans for raising Orientals' wages to the Western standard will not be carried out, but they will create an agitation on this earth almost as fundamental as the Great War itself.

If the Orient can be helped to get out of her coolie condition, and if Italy's workers can be guaranteed a British or American scale of wages, then American labor can go ahead a long way on its own responsibility. These educational enterprises are substantial, permanent things. They build fighters, thinkers, constructive pioneers in the new world that comes out of the war.

Count David Ben Isaac de Kellscritta, a blood relative of the late King of Abyssinia, a Jewish negro, who was naturalized recently after entering the United States Army as a private, speaks twenty-seven languages. Private Kellscritta's only regret, and that was slight, at being naturalized, he said, was that he relinquished the nobility which has been his in Abyssinia. His knowledge of language was proved by the court interpreters, who gave him long test questions in English, French, Spanish, German, Russian, Polish, the Scandinavian languages, Italian, Greek, Arabian, Hebrew, Turkish, and various other dialects. His responses were perfect.

SINKING THE GERMAN FLEET.

The fuss made over the proposed sinking of the German capital ships which were surrendered as one of the conditions of the armistice, arises from a misconception as to the true value of these ships. To the United States and England these ships would be but white elephants, for their design is alien to every strategic conception which has guided both the U. S. Navy Department and the British Admiralty in organizing the mobile sea defenses of their respective countries. The German battleships were designed for one object only, the taking advantage of extraordinary conditions to beat the British Navy in an engagement which would have wrested the command of the seas from the British. This was to be followed by an invasion of England. Whether the propitious circumstances never arose—a not unusual thing in warfare—or whether the German Admiralty lacked the stomach to tackle the job, the fact is that the German "High Sea Fleet" was never given the opportunity to do that for which it was intended and after the Jutland fight even the idea of doing the trick was given up and the ships were stripped of essential parts needed for other purposes. To-day those ships are not even worth scrapping, because the material that might be recovered from them is not worth the labor that would have to be spent on it.

To make the German ships fit to take place in the line of the American or British battle fleets would require practical reconstruction, because, for one thing, though intended to carry each a full complement of about 1,200 men, there is berthing accommodation for only about 400 men and the bunker capacity is utterly insufficient. To call such a fleet the "High Sea Fleet" was a piece of German bluff intended to deceive the world, for its only objective was the risking of a single engagement with the British Grand Fleet. The German ships might prove acceptable to second-class naval powers like France and Italy, whose building facilities are not equal to replacing at once the losses suffered during the war. But if they intend making use of the surrendered German warships they will have to spend an amount of money disproportionate to the value received, as Japan so well learned after the Russian War, when the Russian warships sunk at Port Arthur were raised and repaired as a sop to the pride of the Japanese people, wounded by the terms of the Portsmouth Treaty. It is quite indicated that all the German submarines will be sunk and it is to be hoped that the same treatment may be given the so-called High Sea Fleet, because the final Peace Treaty ought to make such ships unnecessary to other powers after the International Conference has agreed to leave the policing of the seas to the combined fleets of America and England and steps have been taken to prevent the construction of capital warships by private means for lesser naval powers.—"Nauticus."

Possibly the tenement-house cigar manufacturer advertises his weeds by the name of "Robert Burns," "Tom Moore," "Henry George," or other friend of humanity, as a salve to the conscience of those members of organized labor who smoke them.

WOMEN WORKERS ORGANIZE.

More than 80,000 women office workers have joined trade union organizations during the past year, according to reports received by the National Women's Trade Union League at its Washington office. These are for the most part stenographers, clerks, accountants, etc., in the railroad offices throughout the country, and in the various branches of the Federal Civil Service, and they represent about one-half of the total increase in membership recorded by the Brotherhood of Railway Clerks, the National Federation of Federal Employees, and the local stenographers and office workers' unions, all of these organizations affiliated with the American Federation of Labor.

In Washington, D. C., at one recent meeting alone, 700 paid applications were received from clerks in the railroad offices, about half of these being women, and from the Government departments, 8,500 office workers, about three-fourths of them women, have been initiated into their union since January 1st.

This movement among the clerical workers is a part of what is said to be the greatest organization wave among women wage earners ever recorded in the labor movement of America. Besides the women office workers, the school teachers have been rapidly adding to the strength of their organization and the number of their local unions, under the American Federation of Teachers, which likewise is affiliated with the American Federation of Labor. In the unions also of such groups as retail clerks, garment workers, textile workers, machinists, etc., the numbers of women are known to have greatly increased, although no figures are yet available.

The spread of trade union organization among the clerical workers and school teachers, according to officials of the National Women's Trade Union League, is the more significant because it marks the expansion of the labor movement into hitherto unorganized groups and types of workers, notably in the South, where a large proportion of the gains appear, in the Brotherhood of Railway Clerks. This organization has leaped from a membership of 19,000 at the time the Government took over the railroads to a total of about 160,000 according to the last weekly report. A gain of 22,000 members was recorded in the month of January alone.

Of the more than 1100 local lodges of the Brotherhood of Railway Clerks, Washington, D. C., Baltimore, Richmond, Atlanta, Birmingham and other railroad centers of the South, as well as Harrisburg, Pittsburg, Chicago, New York and all the large northern and western railroad cities have organizations with a large percentage of women members.

Among the gains in membership by the National Federation of Federal Employees, besides the 8500 new members in Washington during the past three months, 20 new local unions have been organized since last September. In Washington, D. C., one local of 2600 members is composed entirely of women, and another has more than 9000 women members. Among the other large locals of the Federation with women members are those in New York, Boston, Philadelphia, Baltimore, Chicago, Charleston, S. C., New Orleans, and San Francisco.

BREAKING UP ESTATES.

Writing of the breaking up of great estates in England, the London Daily News records that part of the Duke of Bedford's estate was at first sold privately, and 5,000 acres was afterwards resold for £126,000. During the year £14,000,000 is the approximate estimate of the money paid for purchases of portions of the great landed estates. Among the most important estates that have been broken up were Lord Stalbridge's in Dorset, 8,000 acres, including the town of Shatfesbury, sold for £462,000; the Alton estate in Staffordshire, 5,500 acres, £196,000; the Duke of Sutherland's Scottish estates, £201,000; Gopsall Hall, one of the stately homes of England, 12,000 acres, purchased by Mr. S. J. Waring for nearly half a million; the Earl of Pembroke's estate in Wiltshire, 8,400 acres, £112,000; the Broome and Harcott estates of the Earl of Dudley, 3,200 acres, £121,000; the Duke of Buccleuch's Warwickshire estate, 3.800 acres; £150,000; Lord Anglesey's estate at Burton-on-Trent, 3,000 acres, £152,000; 6,700 acres of the Eaton estate of the Duke of Westminster, sold privately; the Lentworth Hall estate, near Lancaster, also sold privately; Lord Crewe's Spurstow estate, near Beeston Castle, Notts, 2,300 acres, £34,600; 1,800 acres of Sir Robert Peel's estate in Staffordshire, £80,000; the historic Bosworth Park estate, 2,000 acres, £88,000.

Labor's Economic Platform

Following is the Economic Platform adopted by the American Federation of Labor:

1. The abolition of all forms of involuntary servitude, except as a punishment for crime.
2. Free schools, free text books and compulsory education.
3. Unrelenting protest against the issuance and abuse of injunction process in labor disputes.
4. A work day of not more than eight hours in the twenty-four hour day.
5. A strict recognition of not over eight hours per day on all Federal, State or municipal work, and not less than the prevailing per diem wage rate of the class of employment in the vicinity where the work is performed.
6. Release from employment one day in seven.
7. The abolition of the contract system on public work.
8. The municipal ownership of public utilities.
9. The abolition of the sweat-shop system.
10. Sanitary inspection of factory, workshop, mine and home.
11. Liability of employers for injury to body or loss of life.
12. The nationalization of telegraph and telephone.
13. The passage of anti-child labor laws in States where they do not exist and rigid defense of them where they have been enacted into law.
14. Woman suffrage co-equal with man-suffrage.
15. Suitable and plentiful playgrounds for children in all cities.
16. The Initiative and Referendum and the Imperative Mandate and Right of Recall.
17. Continued agitation for the public bath system in all cities.
18. Qualification in permits to build of all cities and towns, that there shall be bathrooms and bathroom attachments in all houses or compartments used for habitation.
19. We favor a system of finance whereby money shall be issued exclusively by the Government, with such regulations and restrictions as will protect it from manipulation by the banking interests for their own private gain.

WEEKLY NEWS LETTER.

(Continued from Page 3.)

gandists, because their hostility to any form of collective bargaining on the part of the workers makes it unnecessary for the revolutionist to prove his point that constitutional methods are of no avail.

"Mr. Armour, of course, would resent the charge that he is developing an unnecessary unrest in this country. He and men of similar mind refuse to see that whenever the American ideal of orderly processes and elemental right are replaced by autocracy, that the revolutionist is handed his strongest weapon—practical illustration."

Unrest Deveolped by Employers.

The real bolsheviki are cheap-john employers and autocratic financiers who have a seventeenth century viewpoint, writes President Perkins of the Cigarmakers' International Union in the official magazine of that organization.

The trade unionist interprets present-day conditions as follows:

"There are two kinds of bolsheviki. (We use that term advisedly and simply for convenience sake.) One is the wild-eyed and impatient red radical; the other is the despotic, autocratic, grab-it-all employer and financier. The latter is almost wholly responsible for the breeding camps that create the bolsheviki, and is more dangerous to our republican institutions, our democracy, and our destiny than is the former.

"After all is said, all must agree that the question of unrest and the creation of the destructive, radical element is absolutely an economic issue rather than a political issue. The so-called unrest, world wide in its scope, is caused absolutely by low wages, long hours, and horribly miserable working conditions of especially the migratory workers and the so-called common laborers and the unorganized. There is unrest in the republic of France, in the limited monarchy of Spain, in the republic of Russia, in the limited monarchy of England, in the republic of Switzerland, in the limited monarchy of Italy, in the republic of Germany, and last but not least, in our own glorious republic of the United States. We repeat that the cause is not the poiitical formation, but rather that it is due almost wholly to adverse economic working conditions.

"The war which we have just passed through aroused new hopes and aspirations and accentuated righteous ambitions in the minds and the hearts of the great mass of the people here and elsewhere. The avowed purpose of America when we went into the world war was to make the world safe for democracy, self-determination, and justice, and our allies accepted this as their purpose, and nothing short of the fulfillment of these pledges and a realization of the expectations of the masses will bring about a reasonable amount of contentment. A certain amount of unrest is good, but the unrest born of oppression and the withholding of natural rights, and justice long deferred breeds contempt for our laws and our institutions, and if not heeded will lead to a dangerous situation insofar as even our own glorious country is concerned.

"The cheap-john manufacturers and the autocratic financiers, who are doing business in the twentieth century and who are trying to apply seventeenth century notions insofar as the treatment of the workers is concerned, and who are the worst bolsheviki we have, will either deal with the legitimate, constructive trade union movement or with the so-called bolshevik element. This is not a threat; it is a plain statement of facts as they exist, which can not be ignored if we hope to escape the inevitable consequences."

"Give Men a Voice in Running Mines."

In the interest of the country the mine workers should have an effective voice in the direction of the mines is one of the recommendations contained in a report issued by the British Government.

Other recommendations include seven hours of work underground instead of eight, from July 16, and six hours from July 13, 1921, subject to the economic position of the industry.

The present system of ownership and operation is condemned and a substitute must be found either in nationalization or unification, by national purchase or joint control, the report says.

Wages, it is stated, should be advanced 2 shillings per shift for mine workers now under sliding scales and 1 shilling advance for workers under 16 years of age.

Another report by the mine owners, members of the commission, recommends a wage increase of 18 pence a day and a seven-hour work day.

A third report by the miners' representatives on the commission recommends acceptance of the miners' demand for an advance of 30 shillings a week, a six-hour day and nationalization of the mines.

The present movement of miners for improved conditions is backed by the unions of railway workers and transport workers, who have formed a triple alliance and made pledges to act together.

A month ago industrial conditions in England had a decidedly ominous aspect, and while unrest is yet widespread there appears an increasing tendency on all sides to discuss the question. There does not appear to be any group of influential employers who assume an attitude that would indicate they want to "fight it out."

WAITING TO BE SAVED.

There is one aspect of the Christian story that carries a profound and unorthodox significance.

The world, it tells us, was saved by a Working Man.

No great ruler was chosen for this stupendous service to humanity. Not a person of wealth and high social standing, but a plain Carpenter, inured to toil, and One who sought among the workers for companions and disciples.

I have always liked that story; the theologians have never been able to spoil it for me. It contains within it the suggestion of a grand truth, that clears up many difficulties and solves many problems when applied to the tumultuous conditions of our own times.

It is only by the workers that the world can be saved to-day.

Its mighty warriors, striding across the stage of history to the fanfare of trumpets, cannot save it.

Its well-bounded statesmen, posing in the limelight provided by their publicity agents, cannot save it.

Neither can it be saved by its high-browed intellectuals, standing aloof from the multitude in the isolation of self-conceit.

The redemption of the world must come, as in that olden tale, from the common people, from the working class.

I hope I shall live to see its coming. It will happen, I am sure, within the compass of the years I may still look forward to.

That is why I am so deeply interested in the progress of the One Big Union idea. The path of salvation opens out in that direction.

It is by the unity of the workers that the Great Change is going to be effected.

The process will be a troublous one. The Working-class Movement will not sweep onward to a swift and unimpeded climax.

There will be much internal agitation. Dissension will threaten to break our ranks, and split us up into quarreling sections.

Don't get alarmed when the situation looks serious. All we have to do is keep our heads, and go on striving for what we conceive to be the right course, however strenuously others may contend we are on the wrong track.

I have faith in such clashes of opinion. Agreement is born amidst the flying sparks of controversy.

The destiny of the working class is so unmistakable that we are bound to come together in unity, however widely sundered we may seem.

In many parts of the earth to-day the signs of cohesion are manifest.

The war appeared to wrench the workers apart. "The Labor Movement is hopelessly riven!" its enemies cried exultingly.

The organization of the European Socialists, that we thought so invincibly strong, was shattered in the cataclysm of August, 1914. Marshaled under hostile banners, the workers were transformed from friends to foes.

Armed men sprang up from the ground, as though in very deed there had been a sowing of dragons' teeth; and the green things sickened and died in the red rain that drenched their roots.

If ever there was a time to despair of the working class, it was then.

But now the horror is over, and out of the smoke and ruin the Labor Movement emerges, with a new life throbbing in its veins, and in its eyes the light of a new vision.

I don't say that our differences are at an end, that henceforth we shall all march forward together, keeping beautifully in step.

It must not be expected. A mechanical precision of that sort is not desirable, anyhow. We want unity, but not uniformity.

The Labor Movement is not an army whose members dare not think for themselves, but must obey.

Let us go on saying nay to one another, and differing keenly, for in such divergencies there is a tingling vitality that will carry us far.

Only we've got to take care that we do

not waste our strength squabbling and quibbling over things of no consequence. And we shall somehow have to sort out the essential from the unimportant, and cleave together on that, howsoever we wrangle otherwise.

Unionism is the essence of our being. And it must be a big unionism, to match the evils it has to overcome, and the regenerative tasks it must accomplish.

The world is ours if we know how to take it, and what to do with it when we've got it.

The statesmen have failed. A ghastly failure is theirs. Misery, devastation, and death are its chief assets.

Now, sitting in the midst of the horrors they have caused, they seek to figure as the saviors of mankind!

Never was there a more hideous travesty than the alleged Peace Conference on which, at this moment, the eyes of the human race are centered.

The League of Nations that the statesmen propose cannot undo the mischief they have done, nor prevent its recurrence.

For that we require a League of Labor.

An international understanding amongst the workers of the world will put an end to war; will abolish the implements of wholesale murder that the statesmen rely upon for their power; will dissolve the social system of the ruling class, which is based on Greed and enforced by the Gun.

Here is our opportunity!

If, in every land, the workers seek and find the widest form of unity, and fashion it into a virile organization, suited to their own genius and their own need, an international community of thought and action will follow.

Big unionism is what we want.

The crafts have had their day. They have done well, but their capacity for good is exhausted; they must now make way for the industries.

In Australia, as elsewhere, there are obstacles to be removed. I do not doubt that they will be. If there were mountains in the road we would shift them.

Capitalism is exposed as a system of frightfulness, tempered by the homely virtues of the crowd. We can get rid of it forever if we are sensible and determined.

Despotism has grown servile and gouty. A push will topple it into its grave.

The world is waiting to be saved.

The workers alone can save it.—The Australian Worker.

Not "What has posterity done for us?" but "What will posterity do to us" is the question that statesmanship may well consider in its treatment of the child labor evil.

The labor movement does not lack for men who can point out the promise of the future. What it too frequently does lack is the man who remembers and respects the lessons of the past.

Strict attention to one's own business is commendable; but the trade unionist should beware of carrying the rule so far as to refuse the attention he owes to the business of his fellow-workers.

Demand the union label upon all purchases!

MODERN TRANSPORTATION.

(Continued from Page 7.)

decks were inlaid with mosaics in which the story of the Iliad was illustrated in a marvelous manner. This vessel was supplied with gardens, a gymnasium, water-tight well for holding fish, and the hold, which was of great depth, "was pumped out by one man by means of a pulley operated by an engine invented by Archimedes."

When we bear in mind that the ancients were in the habit of producing big things, the pyramids, the Colossus of Rhodes, the hundred feet long painting of Nero, vast circuses, etc., there seems to be no good ground for doubting that they built big ships, and not a few of them, nor merely for show. There must have been a great deal of maritime activity during the centuries immediately preceding and following the beginning of our era, and not a few projects of importance designed to facilitate navigation were launched. The vain attempt to cut through the Isthmus of Corinth is often referred to, but the effort made by Nero to create a navigable canal from the Lake Avernus to the mouth of the Tiber is less dwelt upon. Tacitus tells us of this, and in such fashion that the attentive reader has the suspicion aroused in his mind that the sins of that Emperor were more against the taxpayers of Rome than of the sort usually attributed to him.

We have no connected accounts which would permit an extended and perfectly accurate description of the water-borne commerce of the ancients, but we get suggestions in the parenthetical remarks of Pliny which permit inferences to be drawn somewhat at variance with the idea that they depended on man-power as a means of propulsion. Speaking of flax, he remarks: "To think that there is a plant which brings Egypt in close proximity to Italy! So much so, in fact, that Galerius and Balbillus, both of the prefects of Egypt, made the passage to Alexandria from the Straits of Sicily, the one in six and the other in five days. . . . To think that here is a plant which brings Gades . . . within six days of Ostia, near Spain within three, the province of Gallia Narbonensus within two and Africa within one, this last passage having been made by Flavius when legatus of Vibius Crispus, the proconsul, and that, too, with little or no wind to favor his passage."

The concluding clause of the last quoted sentence implies that sails were not solely depended upon, but it is reasonably certain that the ships in the Roman trade were often under a heavy pressure of canvas. One of the vessels sunk in the harbor of Ostia had a mast which Pliny tells us was greatly admired. It was of fir and undoubtedly carried a big sail, for it afforded the motive power that forced through the water a craft which in addition to bearing the obelisk brought from Egypt by order of Caligula, was ballasted with 120,000 modi of lentils, a cargo big enough to tax the capacity of a good-sized modern freighter.

The regions indicated by Pliny in the paragraph above were undoubtedly served by regular "packets." We have testimony to that effect in the New Testament, and the length of time consumed in the voyages probably represents the average run. Pliny mentions sailings to more distant places, not under the jurisdiction of Rome, Taprobana, for instance, which research has identified as the island of Ceylon. He speaks of the ships engaged in this trade being differently constructed from those of Egypt and that their superior sailing qualities enabled the voyage, probably from some port near Aden, to be made in seven days. He also tells us of double-enders devised with the object of avoiding tacking in narrow channels, and intimates that they carried heavy cargoes.

These facts and others which could be added contradict the opinion once maintained that the maritime operations of the peoples of antiquity were not on a great scale. They will scarcely bear comparison with those of the present day, but there is not the slightest reason for doubting that they greatly exceeded in almost every particular the accomplishments of moderns of any period down to the opening years of the nineteenth century.—John P. Young, in the San Francisco Chronicle.

It is said that almost half of the present government of Bohemia is made up of men who have either been subjected to arrest as traitors by the Austrians or become fugitives to the friendlier soils of France, England, and the United States.

The municipality of Copenhagen intends to use about 35 acres of the property it owns near the city for the growing of vegetables for its municipal kitchens and other institutions.

Labor News

The Montgomery, Ala., Advertiser has signed a union-shop contract with the Typographical union. For over 30 years this newspaper has opposed organized labor. It conducted a "closed" shop in the true sense of the term and would not permit the employment of a member of Typographical union.

At a Pittsburg, Pa., meeting attended by representatives of nearly 100 trade unions it was decided to give every possible assistance in the campaign to organize employees in the steel and iron industry and to demand the right of free speech and free assemblage. The unionists will pay especial attention to McKeesport, whose mayor has refused permission to hold meetings.

According to official figures the total number of Americans that have taken up residence in the Province of Alberta, Canada, since 1905 reaches 275,093. The largest immigration into Alberta from the United States came in 1909-10, and numbered 34,563; the smallest in 1918-19 numbered 5,613. Hundreds of Americans have taken up Government land and have become naturalized.

Discussion of the affairs of the Osage Indians in the House Committee on Indian Affairs seems to show them to be the richest people in the world. The 2,200 of the tribe have about 1,500,000 acres of Oklahoma land, about one-tenth of which has been leased for oil purposes. There is now paid to them annually between $4,000 and $5,000 per capita from the oil production.

Wage increases for more than 30,000 members of the Amalgamated Clothing Workers of America were awarded by the advisory board which brought an end to the general strike in the men's and boys' clothing factories by recommending the establishment of the 44-hour week. The board granted $2 a week increase to week workers, 10 per cent. increase to piece workers and 12½ per cent. increase to knee pants workers. The wage increases will become effective on April 1 in factories controlled by the American Men's and Boys' Clothing Manufacturers' Association. The New York Joint Board of the Children's Clothing Trades will demand similar wage increases from independent employers, so the new wage scale will be brought to more than 75,000 workers.

Members of the Pennsylvania State police and the local constable at Coatesville, Pa., recently "deported" more than thirty Southern negroes. The men were rounded up in poolrooms and restaurants in the negro section of the town, marched to the city limits, and told to "head South and keep on going." All of these men were on foot. Nearly all were penniless. For a year or more they were employed in the steel mills at Coatesville at wages higher than they had ever received before. They were hired in Southern cities by employment agents, who paid their transportation North and in many instances promised return fare. Coatesville steel mills have never recognized the unions, and not until last fall was the eight-hour day put into effect. The National Association for the Advancement of Colored People has taken up the deportation outrages with Secretary of Labor Wilson.

You Want the Truth

This year there will be stirring times in the Nation. Under government censorship it is increasingly difficult for the average man to get the real meaning of the social and political movements of the day.

LA FOLLETTE'S MAGAZINE

will be specially represented at Washington and will analyze and present the news from the capital truthfully and fairly. Senator La Follette is making a real fight to lift some of the tax burdens from the common people and place them where they belong — on excess profits, war profits and surplus fortunes and incomes. Because of this he is being attacked more bitterly than any other man in public life.

Send in your order today.

$1.00 Per Year—Agents Wanted

INFORMATION WANTED.

The salvage case of S. S. "Princeton" which salvaged the S. S. "Ardmore," both vessels owned by Standard Oil Company of New Jersey, has been tried and resulted in an award of $7,500 to the crew. This amount has been received, and members of the crew of S. S. "Princeton" are requested to call for same at the offices of Mr. Axtell, One Broadway, New York, N. Y.

For the benefit of the widow of John Karus, lost at sea, October 17, 1918, at 2:15 a. m., according to the report in the official log of the barkentine "Aurora," will all members of the crew of that vessel who know anything about the ship, the condition of her rigging, before and after the accident, or anything that will tend to explain his disappearance, communicate with the undersigned attorney for the widow?—Silas Blake Axtell, No. 1 Broadway, New York City. 1-1-19

Members of the crew of the SS. "Munrio" who were on board said vessel at the time she salved the SS. "Curytibia" in the month of January, 1918, and who have not yet received their full share of the salvage award, will kindly communicate with or call on Silas B. Axtell, 1 Broadway, New York City. 10-23-18

Members of the crew of the S. S. "Fred W. Whellen" who were on board November 11, 1918, when she picked up the bark "Galica" should file their claims with this office and be joined in libel which is being filed by the undersigned on behalf of the members of the crew. Silas B. Axtell, 1 Broadway, New York City. 12-25-18

Ellis R. Nelson, last heard from at New Orleans, La., Nov., 1916, when on board U. S. C. G. S. S. "Davy," is inquired for by his mother. Anyone knowing his whereabouts will kindly communicate with R. J. Nelson, 59 Clay St., San Francisco, Cal. 11-6-18

Carl Hansen, a native of Soon, Norway, age 35, formerly a member of the Lake Seamen's Union, is inquired for by his mother, Marn Hansen, 778 Sixth Ave., Milwaukee, Wis. 8-17-18

INFORMATION WANTED.

One B. Kajakcorchi, oiler, of Russian nativity and member of Seamen's Union, was injured on the steamer "Paraiso," of Swayne & Hoyt, San Francisco. The vessel was one day out of New York and on the second watch the strap on the go ahead starboard eccentric broke, with the result that Kajakcorchi had his left hand smashed all to pieces. He has been in the hospital ever since and will be disabled for many months. He has a permanent disability. Patrick Ennis and Andrew McCann, who know about the previous condition of this strap, will oblige me by communicating with me or the nearest Union delegate. This strap, we have reason to believe, was worn out and defective, as it had been heating up continuously for nearly three weeks prior to the accident. Silas B. Axtell, Esq., 1 Broadway, New York City. 8-21-18

An appeal has been taken by the owners of the Bark "Portugal" from the decision of the Federal District Court in the matter of salvage award of $30,000 recently made and referred to in these columns. The determination of this appeal may be a matter of six months. Seamen who wish to get their money as soon as possible should communicate with Silas B. Axtell, Attorney, One Broadway, New York, in order that I may send them a power of attorney form to be signed, which will be required by the court before the money can be paid out. The crew, of course, are sure to get some money and they will probably get their portion of the amount awarded by the lower court. It seems quite possible that the decision of the lower court will be affirmed.

The following men: August Rosso, oiler; Robert Anser, oiler, and V. Florio, wiper, who were employed on the S. S. "Comet," on or about November 22nd, 1917, when John Olsen was injured through the leaking of a gland which caused his hand to get tangled up in the motor, whereby he sustained severe and permanent injuries, will please communicate with me without delay. They may furnish valuable evidence to assist Olsen in his suit against the Standard Transportation Company. His injuries are very serious. S. B. Axtell, 1 Broadway, New York City.

Members of the crew of the S. S. "Argonaut," who assisted in the salvage services to the S. S. "Jason," at the time she was in distress off the coast of Florida, on or about January 1st, 1918, will kindly call or communicate with the undersigned who is representing most of the officers and crew of the S. S. "Argonaut." Silas B. Axtell, One Broadway, New York City.

Frank J. Phillips, a member of the Marine Firemen's, Oilers' and Watertenders' Union of the Atlantic and Gulf, last heard of in San Francisco, Cal., April, 1916. Anyone knowing his whereabouts will please notify Mrs. Frank J. Phillips, P. O. Box 521, San Pedro, Cal. 2-19-19

Members of the crew of the SS. "Gulf of Mexico" may obtain money due them for salvage services rendered to the bark "Portugal" by communicating with Silas B. Axtell, Attorney for Seamen's Unions, 1 Broadway, Room J, New York City. 10-16-18

Home News

The United States informed the Allies on the 7th that we will be satisfied with the amounts collected by the Alien Property Custodian, (probably over $700,000,000), and will not ask for further reparation from Germany or Austria.

The United States Tariff Commission has issued a report on reciprocity in commercial treaties covering the experience of the United States and other countries since 1854. It recommends that the United States treat all countries on the same terms with respect to tariffs, and in turn require equal treatment from every other country.

The new milk condensary owned by the Seattle Co-operative Market will have an output of three thousand cases of condensed milk per week. The Seattle Co-operators are planning also to produce thirty tons per week of frozen salt water fish, sole, halibut, cod, salmon, etc. The operation of a steam trawler is being arranged for.

The New Jersey State Board of Charities and Correction has recommended to the State Budget Commission an appropriation of $100,000 for the State Department of Conservation and Development, to provide for the employment of inmates of correctional institutions in the extermination of salt marsh mosquitoes in New Jersey.

The New York World's Washington correspondent says that the Democratic leaders welcome the Republican insistence that the League of Nations be made a party issue. Mr. Hughes, speaking before the New York County Lawyers' Association at the Hotel Astor, deprecated approaching the question from any point of view as a partisan.

A motor car to sell at $250 to $350 is to be manufactured by a new company to be organized by Henry Ford and his son, Edsel. This announcement was made in Detroit by Edsel Ford, but the attorneys for Dodge Brothers, large stock owners in the Ford Motor Company, state that the projected concern will not be allowed, because Mr. Ford is under contract with the present firm.

The Merchants' Association of New York in its bulletin for the past week prints a long series of letters from business houses asserting that import and export business is being seriously injured, with no apparent benefit to any one, because of delays and difficulties in cabling and because of the refusal of the Government to permit the use of code in commercial messages.

With full State co-operation according to the terms of the Federal Aid Road Act, the United States will have a total of at least $574,000,000 for co-operative road building during the next three years. The federal part of this fund is assured by an extra appropriation of $209,000,000 in the Post Office Appropriation bill, passed by Congress and signed by the President.

A statement made by the Public Education Association declares that there are 30,000 to 50,000 children in New York City who are receiving no instruction whatever because of the shortage of 1,000 teachers. "Unless the salaries of teachers as well as the conditions under which they work are made just and attractive we cannot retain the force we now have, let alone obtain new ones."

Domestic and Naval

The British steamship "Gravelpark," 927 tons gross, 549 net, carries about 1,400 tons deadweight on about 15 ft. 1½ in., built at Greenock in 1901, steams about 9 knots on about 9 tons Welsh coal, has been sold by auction in London to Mr. James, Southampton, for about £26,700.

In a letter to Congressman Alvin T. Fuller, President Wilson expressed his disapproval of the reported intention of taking the German Navy to sea and sinking it. The President said the business sense of the people at large would be utterly opposed to the wanton destruction of a navy worth $200,000,000.

The British steamship "Duns Law," ex-"Port Chalmers," 4,077 tons gross, 2,602 net, carries about 7,200 tons deadweight on about 25 ft., built at Newcastle in 1905, steams about 10½ knots on about 38 tons, has been sold by auction in London for £95,000 to R. S. Dalgliesh, Newcastle. In June, 1912, she was sold for less than £40,000.

Action for libel aggregating $37,000 has been filed at San Francisco against the Belgian four-masted bark "L'Averne" by the El Dorado Oil Company and Balfour, Guthrie & Company. The El Dorado Company alleges that it shipped a large amount of copra from the Orient to this port by the "L'Averne." When the ship arrived last month, the copra was spoiled, it is alleged, on account of poor stowage, and $10,000 damages is asked. The Balfour Guthrie Company wants $27,000 for damage to a shipment of cocoanut oil.

Last year's profits of the American International Corporation are so stupenduous that no attention is paid to the seamen's law, which is invariably due for a denunciation when a shipping company makes a report. The corporation reports earnings of $7,846,547 with net returns of $3,716,379 on a total capitalization of about $30,000,000, of which only 60 per cent. has been paid in. This means that if a man subscribed for $1,000 of stock in this corporation, he paid but $600, and this investment returned in one year a profit of $371. The corporation owns the Hog Island ship yards, and has holdings in the Pacific Mail Company, the International Merchant Marine and other shipping concerns.

Establishment of "the world's largest steamship company" in Japan will become effective on May 1, according to information just received. It is said that the Nippon Yusen Kaisha and the Osaka Shosen Kaisha, the only powerful companies that had declined to enter the combine, had decided to cast their lot with the other Japanese concerns. The combination will include the Toyo Kisen Kaisha, Suzuki & Co., Harima and Kobe drydocks, Teikoku Kisen Kaisha, Uchida Kisen Kaisha, Toba Dockyard Company and Asano Shipbuilding Company. Japanese newspapers, according to reports, stated that American capital had been invited to participate in a $500,000,000 combination, but that if American financiers decided not to enter the project the Japanese companies will carry it through. The routes projected include three lines to practically every important trade port in the world.

News from Abroad

The State of Morelos, Mexico, which for ten years has been dominated by Zapata, is now under the control of Government troops and Zapata has taken refuge with a few followers in the extreme southwest.

A cablegram from Tokyo, Japan, states that a Government bill which proposes to permit Chinese labor to enter Japan and also to grant the privilege of mining and property rights to foreigners, has been introduced into the Parliament.

Sir Eric Geddes, Minister without portfolio, introducing before the House of Commons a bill to establish a Ministry of Transportation, said that with the exception of the street railways the transportation system of Great Britain financially is in a semi-paralyzed state.

To take care of unemployed returned soldiers, the Federal Government of Australia has appropriated, it was reported from Melbourne on the 11th, $2,500,000 to construct public works pending completion of a larger scheme to provide work for homecoming Anzacs along permanent lines.

Foreign exchange transactions between the United States and Russia have been prohibited by the Federal Reserve Board, and similar action has been taken by the authorities of Great Britain and France. It is understood that one purpose of the step is to stop the financing of Bolshevist propaganda.

While Marquis Okuma and officials of the Japanese Government are expressing approval of the League, the army and navy officials in Japan are reported to be opposed to it. Among others they raise the question of whether or not an international army will fight with the same enthusiasm as an army imbued with patriotism for its own country.

An official announcement made in the House of Commons, London, shows that the amount paid for British ships lost while under government requisition and at direct government risk, excluding vessels insured in the war-risk associations, was £104,031,271, the first cost of which to the owners was £51,116,-806; while £1,368,823 was paid in respect of twenty-five ships whose first cost is not known.

On the 6th a bill passed the second reading in the House of Commons, by a vote of 304 to 71, providing for 900,000 men as an army of occupation for Great Britain. This army will be composed of men who enlist for a period ending April 30, 1920. In the discussion it appeared that the Government was determined to stand by France in any troubles that might arise in after-war conditions or political development in Germany, and the notion was repudiated that the army was in any way to be used against Russia.

War-time industry in Japan is fast waning, so that unemployment has been caused in many lines. Government returns show that already about 20,000 hands have been put out of work. This has brought up the question of labor in the Diet and other public forums and, with the question of the expansion of the franchise, is being taken advantage of by some agitating for universal suffrage. Whether they are sincere or not in their protestations, there is common talk here that they purpose forming an out-and-out labor party.

With the Wits

"Well," said the Yankee, after having had both legs amputated, "I can't kick."—Cornell Widow.

"I shuddered when Tom proposed."
"Was he so awkward?"
"Oh, no; he did it so well."—Dallas News.

"Do you want to see the book of the opera?"
"No, I'm confused enough as it is."—Kansas City Journal.

Mike—Oi'd wroite to Callahan for a job if Oi knew his address.
Pat—Phwy don't yez wroite to him an' get his address?—Cleveland Leader.

Knicker—Has Jones returned to his pre-war work?
Bocker—Yes, he is looking for the same job he was looking for.—New York Sun.

"Better not ask papa yet, dear. He has the gout in one foot."
"All right. I'll wait till he gets well or gets the gout in both feet."—Boston Transcript.

What sort of risk will the insurance companies consider the first German drummer who takes his goods into France and Belgium?—Rochester Post-Express.

First Student—The idea; my napkin is damp!
Second Student—Perhaps that's because there is so much due on your board.—Stanford Chaparral.

Officer—You are the coolest man under fire I ever saw.
Soldier—Oh, I'm quite used to being shot at. I was an Adirondack guide, sir, for years.—Current Opinion.

Mary—What are you doing these days?
Marie—Same old thing.
Mary—Are you, really? I thought he went over to France.—Orange Peel.

Customer (telephoning tailor)—You send out the clothes and if they are O. K. I will send you my check.
Tailor—Won't do it. You send me the check first and if it is O. K. I will send you the clothes.—Judge.

"To-morrow's my birthday and I shall get the usual very welcome box of cigars from my wife."
"Welcome? Huh! I'll bet you throw them away."
"Not much, I don't! I give them to my friends. They remember the horror, and later when I offer them a cigar that's really good they pass. I tell you wife's gift is dozens of dollars in my pocket every year."—Houston Post.

An Invitation

We invite deposits from every one—rich, poor, old and young. We recognize no classes, but treat large and small depositors with the same courtesy and consideration.

Taylor's Nautical Academy

Established 1888

Consular Building, Corner Washington and Battery Streets, Opposite New Custom House, San Francisco, Cal.

THIS OLD AND NOTEWORTHY SCHOOL is under the direct and personal supervision of CAPTAIN HENRY TAYLOR and equipped with all modern appliances to illustrate and teach any branch of Navigation.

The class of teachers of Navigation in the past have been those having simply a knowledge of Navigation, and Navigation only. Conditions have changed, and the American seamen demand a man as a teacher with higher attainments than one who has only the limited ability of a seaman. The Principal of this School, keeping this always in view, studied several years the Maritime Law, and is now, in addition to being a thorough teacher of Navigation and its kindred subjects, a regularly admitted Member of the Bar.

There is no standard of education required of a pupil entering the School, for no matter how ignorant the seaman may be, even in the rudiments of common education, Captain Henry Taylor will teach and raise him from the depths of ignorance to the height of the average well-informed man, and in a comparatively short interval of time.

THE SEAMEN'S JOURNAL

FOR THE SEAFARING PEOPLE OF THE WORLD.
Official Paper of the International Seamen's Union of America.

A Journal of Seamen, by Seamen, for Seamen. Our Aim: The Brotherhood of the Sea. Our Motto: Justice by Organization.

VOL. XXXII, No. 32. SAN FRANCISCO, WEDNESDAY, APRIL 16, 1919. Whole No. 2534.

SEAMEN'S ACT CHAMPIONED

Attacks by Reactionary Interests At Home and Abroad Ably Refuted

In nearly all recent discussions of our national shipping policy the La Follette Seamen's Act has been prominently featured. Generally exposition of the law has been from the viewpoint of the shipowner or operator. This because of the shipowner's superior facilities for obtaining public hearing in any controversy with seamen.

Considering it desirable to present the other side of the case; that is, to review the application of the law from the standpoint of its advocates and the seamen themselves, the Navy League of the United States recently requested Attorney Silas B. Axtell, of New York, to write an article on the subject for publication by the League.

Mr. Axtell has complied with the request His rather busy career as chief legal counsel for the International Seamen's Union of America, in the many actions at law instituted by that organization in defense of the Seamen's Act, has given him an insight into the workings of the law possessed by few living men. It was the knowledge of this fact which prompted the request for his views by the Navy League.

The full text of Mr. Axtell's article follows.

The American people should be informed as to an important fact concerning Merchant Shipping. The fact is that wages on foreign vessels engaged in competition with vessels of the United States on the Atlantic Coast have increased approximately 200 per cent. since 1916.

When the Seamen's Act, or the La Follette Act, went into effect on the Atlantic Coast, it was claimed that it would have that effect. To-day, the prophecy of its advocates that it would bring about equalization of pay or labor operating cost of all vessels engaged in American trade, would seem to have come true, for on investigation I find the scale of wages on vessels of various foreign nations to be approximately as follows:

	Firemen.	Deckhands.
Denmark	$75.00	$75.00
Sweden	75.00	75.00
Norway	75.00	75.00
Holland	75 00	75.00
British	75.00	75.00
American	75.00	75.00

The opponents of the Seamen's Act say that the war has caused the shortage of seamen, and hence the increase in wages of seamen on foreign vessels. If this is so, it seems strange that they should have all without any international agreement reached the same level with that previously establisherd by the United States Shipping Board in May, 1918.

The truth of the matter is that belligerent nations all exempted seamen or any person employed as a seaman from compulsory military service and at no time was there an actual shortage of seamen; in no country was there an organized strike of seamen for higher wages. The exemption from draft duty in the United States and Great Britain tended rather to increase than decrease the supply of available seamen, so we must look for another cause.

The explanation of the equalization of wages on all vessels engaged in American trade on the Atlantic Coast, it seems, is the upsetting of wage conditions caused by the enforcement of the Seamen's Act.

The average layman from reading editorial references or occasional news items has little conception of the Seamen's Act, the conditions that gave it birth, or its method of operation. If any opinion has been formed, the average reader has formed it without any mental operation of his own, for he has not been provided with the true facts, or any facts. Most people associate the Act with the record of Senator LaFollette in the United States Senate.

The features of the Seamen's Act that have wrought the change in wage conditions on the vessels of our competitors are almost wholly the work of Andrew Furuseth, pioneer seamen's statesman, an exceptionally gifted, brilliant, far-seeing humanitarian, who for twenty years or more, endeavored to get the Seamen's Act or certain parts of it passed by Congress. In 1911, the House and Senate, then Republican, both passed it as a national measure, but President Taft vetoed it. It was passed by the Democrats and signed by President Wilson. It went into effect on March 4, 1915, as against American vessels, and on July 1, 1916, as against most foreign vessels. As introduced by Senator LaFollette and passed by the Senate, it contained many provisions as to life-saving appliances, and lifeboat drill. The provision that a certain number, 75 per cent. of the crew, should be able to understand orders given to them by their officers and that 65 per cent. at the end of five years should be certified able seamen (men with three years' experience) undoubtedly was passed to prevent recurrences of marine disasters like the "Titanic," which was fresh in the minds of everybody at the time. Many lives, it was claimed, could have been saved had the crew of that ship been able to understand orders, had they had sufficient experience, and had they known how to handle water-tight bulkheads and lower life boats. But these provisions were objectionable to some shipowners, just the same, as other employers have objected to the expense of putting guards on dangerous machinery and fire escapes on their buildings.

What foreign shipowners do and have objected to most strenuously are the destructive features of the Act, destructive from their point of view alone. Destructive of human slavery and constructive of liberty, destructive of the privilege to use of low wages they had enjoyed while in trade with America. It is true that wages on foreign vessels in 1914 were less than half the average on American vessels. To-day, the American and British are the same.

The features of this Act that are destructive to the protection of foreign ships are two. First, the provision that directed the President of the United States to abrogate all our treaties with all nations that in any way interfered with the enforcement of the provisions of the Act as against foreign vessels, and those provisions of our treaties, reciprocal in character, that gave foreign consuls exclusive jurisdiction over wage disputes and matters concerning the internal regime of the ship.

Second, the right to call upon our police to arrest seamen who deserted from foreign vessels while in our ports. This part of the Act gave to the seaman legal liberty, a right to break his civil contract on the low wage ship, if higher wages were offered on other vessels in our ports.

The other provision aimed at foreign shipowners and those Americans who saw fit to invest their money in foreign bottoms was the provision that gave seamen on foreign vessels the right to demand one-half the wages they had then carned not paid to date of demand. This was simply an amendment of Section 4530 of the United States Revised Statutes, a part of the Act of 1790, which formerly gave to seamen on American vessels, alone the right to one-third due and since 1898 one-half wages due. This was designed to give the seaman economic liberty; in other words, enough money so he could live until he found other employment.

The Act in these features had two purposes, one humanitarian, to abolish involuntary servitude for the seamen, to a degree at least; the other, economic, to protect and encourage American shipping, by equalizing wages on all vessels competing wtih us. The facts above stated seem to indicate that it has had the desired effect. If those who "holler" are the ones hurt, then we must conclude it is the foreign interests, for they are the only ones who have opposed the enforcement of the Act. Norwegian, Dutch, Danish and British owners have opposed this Act. British consuls at New York and New Orleans and other ports opposed the Act. Some of our best admiralty firms, such as Messrs. Kirlin, Woolsey & Hickox, of New York, and the international lawyer, Frederick R. Coudert, were retained to carry the appeals in some cases to the Supreme Court of the United States, but their opposition has been for naught. In vain did they appeal to the President to have the Act suspended as a war measure, arguing that their ships were detained because of desertions. There were desertions by the hundreds; a vessel from Copenhagen or Liverpool would no sooner land at Brooklyn pier with a low wage crew, than a demand for half wages would be made, and if the demand was refused, which it often was, the seamen left, taking their clothes with them, retained counsel,

and sued for the balance of their wages. Many a British ship early in 1916, and other foreign ships in the fall of 1916, came in to port with a crew of deckhands and firemen at twenty to twenty-five dollars per month, and departed with a crew at fifty-five and sixty dollars per month. The Greek ship "Patris" was paying her firemen seventeen dollars per month, but departed with firemen at sixty dollars per month.

Due to the revolutionary character of the Act, the misunderstanding of our courts, the generally prevailing notion that it wasn't nice to treat our foreign visitors in this manner, the seamen won few cases, and what they did win were appealed. As attorney for the seamen, I was met with the bitterest of opposition. Few people understood the Act, or tried to. It was called the "LaFollette Act," and that was enough to condemn it. In spite of this, it had the desired effect. Wages on foreign ships increased. Seamen, in England, were jailed for six months for breaking their contracts here. This did more harm than good, from the foreign shipowner's point of view. Industrial unrest at last was stirring amongst the seamen. Finally, in order to keep their crews on board, to avoid delays and the expense of hiring new crews, the foreign owners have adopted a policy of paying the American scale on all their ships when they hire them, whether it be here or in foreign ports. Equalization is an accomplished fact, as against all ships to which these features of the Seamen's Act has been applied.

One critic of the Act said about it, without intending to be complimentary, "It's an ingenious device for the manufacture of American seamen." I believe with Captain Mahan that seapower is in the seamen. England triumphed over the Spanish armada due to the superior skill of her mariners. Seamen cannot be grown like mushrooms or built in sixty days like a ship. I believe as Furuseth says "Ships are but tools in the hands of seamen." Give us free seamen, then; not conscripted like the seamen of France. Let us make conditions such on shipboard, that Americans, your boy, and my boy, can and will go to sea.

By the principle of the Seamen's Act we will accomplish this; for the Seamen's Act is founded on economic law and the natural desire of the human race for freedom, stronger to-day than ever before.

The seaman's bondage antedates history itself. We know that in the days of the Phoenecians, he was bound to his ship for the whole period of the voyage by the laws of Oleron. From the thirteenth century and down to the Merchant Shipping Act of Great Britain—1896 to 1905—his status remained unchanged. In the early days of serfdom his life was freer than that of the shore slave or serf, but, as democratic government gradually superseded autocracy, then the seaman, because he had no vote and had no voice in affairs, found no relief. Before the development of their power, and the expansion of foreign trade, there was some excuse for arresting a seaman if he broke his civil contract, leaving his vessel to "rot in her brine." Many innocent people might be affected, but those conditions have not existed for forty years.

The seaman's life has been regarded as a dog's life. Volumes have been written proving his incompetence and worthlessness, his intemperance, his shameless extravagance. Few have told of the terrible hardship and hopelessness of his career while on ship or ashore. On ship at the mercy of his master, always cheated, often beaten and underfed; ashore, the victim of the crimp and the employer, shaghaied, robbed, forced into unfair contracts, at no time his own master, the young seaman's life has been the very antithesis of an American boy ashore, and one that we, with American standards of life and ideals, can regard only with repugnance.

All this arose from the nature of his contract of employment and the treaty provisions referred to that forced compliance. The contract made in foreign ports required the seaman to work for periods of twelve to thirty-six calendar months, to be paid no money during the voyage, except at the option of the master, to have no shore liberty except at the master's leave, meanwhile, subjected to the most severe penalties for the slightest infraction of discipline.

The master and officers themselves underpaid and having been trained as apprentices from a different strata of society, often, indeed generally, abused their power over the seamen, to their own pecuniary advantage. Instances of their collusion with clothing dealers ashore to overcharge the seaman with share profits, are common still. Many a deserter's wages have found their way in the pockets of the master, for the seaman, being a criminal could not collect them. The unchecked power of the master, as vice-principal of the owner, led to many abuses. By harsh treatment, starvation and overwork, seamen were compelled to give up all or part of their earnings.

So it is that our young manhood could not live under such conditions, nor do we as a people desire it.

What of greatest importance was accomplished is this: Foreign shipowners have been compelled to accept the American standard of wages. Now as never before in the history of the country, we can pay whatever wages are necessary to induce seamen to go to sea. That means that American shipowners can pay a wage high enough to induce American boys to follow the sea, and still, by operation of the laws of supply and demand, the foreign competitors must pay the same. The rest of the race is one of ship building, economic loading and unloading, the development possibly of labor-saving devices to avoid the disagreeable and extremely laborious features of sea going, may be expected.

The dawn of a new day is here. America will again take her place on the seas. We will no longer depend on our competitors to deliver our goods to foreign markets. We will have seapower of ships and seamen as well.

Many things can be done still to improve conditions. We can establish free shipping offices, operated by the Federal Government, that will do away with the crimp.

We can make all our statutes that seem burdensome to American shipowners, but which make life at sea more liveable and safe, equally as burdensome to the foreign shipowners, by applying it to his ships.

Foreign nations have been fighting with us as allies to preserve democracy for the people of the earth. They are now joining in making the seaman a freer and a better man.

WAGES AND WARS.

When nations produce more than they consume there is a surplus for export. The lower the percentage of social income paid producers the greater the surplus. The higher the wages the larger the home market and the smaller the surplus. A "favorable" balance of trade represents an amount held out of wages.

We have always been proud of an excess of exports over imports. We have thought it a fine thing. Other nations have also sought a balance of trade in their favor.

The consuming power of a country should equal its producing power. Why not? Why should not the home market be large enough to retain the goods produced or their equivalent in value? Foreign trade would still go on for exchange of commodities. But foreign trade for the purpose of storing withheld wages in the pockets of a class is different.

High wages increase the home market. A man with $1,000 of income has $1,000 of consuming power. Pay him $2,000 and he can buy twice as much; he becomes twice as much of a market, and to this extent he cuts down the quantity of goods to be exported. Surplus goods are withheld wages. Underpay labor and the value of goods for export mounts higher. Increase the producer's share sufficiently and the home market overtakes producing power.

The central factor in the future peace of the world is the relation of the income of the individual to his production. If producers create wealth far in excess of what they receive the struggle for foreign markets will be severe and hostile.

Peace is possible with plenty. It is not possible with underpaid labor. Nations should be proud, not of surplus for foreign export, but of the development of the home market by increasing the buying power of the people and thus their welfare. —By Arland D. Weeks, Dean of School of Education, North Dakota Agricultural College, Fargo, N. D.; author of "Education of To-morrow" and "The Psychology of Citizenship."

STEALING COMMON FROM GOOSE.

"We prosecute the man or woman
Who steals the goose from off the common,
But let the greater felon loose
Who steals the common from the goose."

DELUSIONS OF DEMOCRACY.

We are brought up with a slow grinding of the brakes as we encounter this passage in a book, full of excellent thought and language, that we happen to be reading. Stop, look and listen:

"In these our days the Englishman is an incurable democrat, and being so he must needs take in with his mother's milk the vast repertoire of delusions which go with democracy, and particularly the master delusion that all human problems, in the last analysis, are soluble, and that all that is required for their solution is to take counsel freely, to listen to wizards, to count votes, to agree upon legislation. . . . Take away this notion that there is some mysterious infallibility in the sense of the majority, this theory that the consensus of opinion is inspired, and the democratic idea begins to wither; in fact, it ceases to have any intelligibility at all."

This is one of those arguments that are often made (in one fashion and on one subject after another) with an ingenious and persuasive air, and which no intelligent man will bother to deny, and which actually do not affect the real question at all. Making arguments like this is simply wasting polemical pearls. One shows his cleverness to no purpose.

Democracy does not depend for its validity upon the "notion that there is some mysterious infallibility in the sense of the majority." The only one who ever makes such an absurd claim is the demagogue—and he doesn't believe it. His shallow dupes may believe it. But intelligent democrats (we use the word in its social not in its partisan sense) make no such claim.

The reason democracy is valid, for one thing, is that the majority have a right to decide their own political destiny, whether they decide it rightly or wrongly, whether they make mistakes galore or not. It is upon the fundamental proposition that government should rest upon the consent of the governed, or, to put it better still, that the people should govern themselves, that democracy rests itself.

Again, democracy is in line with progress. It is under democratic institutions that the race has made its most remarkable progress. It is under democratic institutions that education becomes really anything like a race opportunity, that intelligence grows among the masses, that the spirit of man is liberated for great achievement and high enterprise.

Viewed in a still more practical light, the masses have the power to rule, and they are learning more and more how to use that power effectively. That, at least, is an argument for democracy that cannot be gainsaid as time increases its potency. One cannot quarrel with history, with evolution, unless one wishes to make oneself appear very foolish.

The war has given the democratic idea a tremendous new impulse. It will grow greatly, and in the process of its growth it will lose many of its imperfections and delusions, and ultimately, let us hope, it will lose all of them.

A Danish physician, who formerly manufactured artificial legs out of papier mache, now makes artificial feet out of paper pulp.

WEEKLY NEWS LETTER

Contributed by American Federation of Labor

Private Spies Banned.

Private organizations offering to continue during peace time the espionage work undertaken during the war to protect the public safety have been informed by United States Attorney General Palmer that the department of justice will not recognize them or have any connection with them, official or semi-official.

"Espionage conducted by private individuals or organizations," said the Attorney General, "is entirely at variance with our theories of government and its operation in any community constitutes a grave menace to that feeling of public confidence which is the chief force making for the maintenance of good order."

The Attorney General said that war necessities called into existence the American Protective League, which went out of existence on February 1.

Regarding the work of espionage organizations in peace times the Attorney General said:

"I am constrained to say frankly that I fear the work of these private organizations may produce harmful results. I, therefore, feel compelled to instruct the various officials of this department not to enter into relations with them."

Science Aids Miners.

The geophone, invented during the war to determine the exact location of sounds above and beneath the surface of the earth, soon will be used extensively in mining operations in this country, reports the United States Bureau of Mines.

The instrument proved of great value to the allies in determining the location of hostile batteries and in detecting the approach of the enemy. The digging of trenches or tunnels in the earth also could be located with great accuracy.

Almost equally valuable uses will be found for the geophone in mining operations, either for sounding purposes or in determining the location of men blocked from escape by cave-ins or explosions. Many lives are lost each year in mines through inability of searching parties to locate men thus held prisoners.

Living Cost Going Up.

In a statement just issued on living costs during November, last year, the United States Bureau of Labor Statistics says that during that period food prices advanced 1 per cent. as compared with October, last year, and 18 per cent. as compared with November, 1917.

In the five-year period, from November, 1913, to November, 1918, all articles of food combined increased 75 per cent. Every article increased 50 per cent. or more. These six articles increased 100 per cent. or more: Pork chops and sugar, 100 per cent.; flour, 103 per cent.; corn meal, 110 per cent.; bacon, 114 per cent., and lard, 115 per cent.

Brunswick-Balke Strike.

Officers of the International Metal Polishers' union are calling attention to the strike of Dubuque (Iowa) metal polishers employed at the factories of the Brunswick-Balke-Collender Company, located in that city, and which manufactures Brunswick phonographs. The strike was caused by trade union victimization, low wages and long hours. The company has refused to arbitrate differences, as recommended by a representative of the United States Department of Labor.

The unionists say that as an example of the methods of this concern, one of its representatives who inspected the finished product compelled each metal polisher to pay him 25 cents every pay day for "assistance rendered." When the men organized and decided not to be filched out of this money their work no longer passed inspection and they were forced to accept large quantities that were thrown back on them.

Do We Need Schools?

More than one-fourth, or 5,294, of the 19,546 children between 14 and 16 years of age to whom federal age certificates were issued by the Children's Bureau during the life of the former child labor law could not sign their own names legibly.

In the five States where federal certificates were issued by the Children's Bureau, 18,379 white children between 14 and 16 years old were certificated. Only 742 of them had reached the eighth grade in school. Of 1,166 colored children to whom certificates were issued only forty reached the eighth grade. In other words, 96 per cent. of the white children and 97 per cent. of the colored children granted certificates had not reached the eighth grade in school. In some States a child can not secure a work permit until he is 16 years old, unless he has completed the eighth grade. Only 248, or 1.3 per cent. of the total number of children certificated, could have met such a requirement, because they alone of the children certificated had attained the ninth grade or higher.

Doubtless these figures are subject to qualification, but they are nevertheless significant.

Inventor Pleads Case.

The nine justices of the United States Supreme Court permitted William F. Brothers, a Brooklyn inventor, to plead his case against the government, whom he charges with using his unloading device without his consent in the construction of the Panama Canal. The inventor told the court he was too poor to employ counsel and asked that he be awarded damages against the government.

Brothers made an extended argument which he illustrated by a small model of his invention. He was frequently interrupted by members of the court, who asked him questions.

Scoff at Welfare Work.

Champ Andrews, Chattanooga manufacturer, startled the members of the Rotary Club in a talk on the question of "capital" and labor. It was expected, of course, that the speaker would indulge in the usual pleasantries and harmless nothings, but he sur-

World's Workers

Demanding higher wages, an 8 hour day and the abolition of work by prisoners of war, 19,000 agricultural workers went on strike at Palermo, Italy.

The labor situation in Norway has reached an acute stage following the organization of a council of workmen and soldiers. Thousands of workmen refused to renew their contracts with the employers.

Two of the professions that learn a little Latin went on strike in Wilhelmshaven lately. The doctors and chemists of that now so inappropriately named German town notified the vulgar working people who had struck on their march to freedom that they would treat no more until the industrial strike was over.

Concessions all along the line to the workers have resulted in the calling off of the general strike in Barcelona. The workers were successful in having a minimum wage established, in compelling the government to demobilize immediately all strikers called to the colors, and in securing a pledge that employers will adopt no reprisals.

In its new constitution the Nova Scotia provincial Federation of Labor declares for a 36-hour work week for this province. It also favors a system of taxation whereby land held for speculative purposes will be assessed at the owner's selling price. The first preamble of the constitution declares for free and compulsory education.

A gain of 38,000 members within one year is the proud achievement of the Swedish Federation of Labor, according to its report for 1918 recently published. This increase brings the total membership up to 217,000 organized workers. Göteborg boasts of having over 25,000 organized workers. Of these, 19,000 are members of the Socialist Party and belong to the Workingmen's Commune.

The minimum wage to be paid to adult women employees throughout the metropolitan area of Sydney, N. S. W., has been fixed by the New South Wales Board of Trade at sevenpence halfpenny an hour, or 5s. a day, or £1 10s. a week. This was declared to be the lowest living wage which could be awarded. Mr. Justice Heydon, chairman of the board, stated that the court had declared the wage as £1 8s. 6d., but, owing to the extraordinary increase of nearly all articles of women's clothing, an additional 1s. 6d. had been added to the estimate.

"It must be clear to any thinking person that without the co-operation of labor throughout the Empire the carrying of the war to a successful issue would have been impossible," said Sir Joseph Ward, New Zealand Minister for Finance, in a recent speech. Sir Joseph said that there were problems which would have to be settled between labor and capital, but he was satisfied that by mutual concession and co-operation they would be satisfactorily solved. "It seems to me impossible that the idol of cheapness shall continue to reign after the war. There will certainly be high rates of wages, and a higher consequent cost of articles of consumption and apparel than hitherto, but the increased purchasing power of the people will mitigate to a large extent the apparent disabilities due to increased prices."

INFORMATION WANTED.

Albert H. Roberts, a member of the Sailors' Union of the Pacific, last heard of in Callao, Peru, April, 1918. Anyone knowing his whereabouts will please notify Mrs. John Jordan, 1815 Twelfth avenue, Seattle, Wash. 3-26-19

H. Lincoln and Joseph E. Reed, who were seamen on the bark "Mashulu," when boatswain John Wallin was hurt at Melbourne, on January 29, 1918, will please communicate with F. R. Wall, 324 Merchants' Exchange Bldg., or boatswain John Wallin, U. S. Marine Hospital, San Francisco. 1-8-19

Oscar Aberg, a native of Sweden, age 25 years, last heard of in Newport News, Va., March, 1917. Anyone knowing his whereabouts will please notify his sister, Mrs. Gurli Landee, Box 166, Millburn, N. J. 3-26-19

Pacific Coast Marine.

The British motorship "Malahat" will soon depart from Yokohama direct to Portland, under consignment by J. J. Moore & Co. of San Francisco.

Officials of the Shipping Board have informed the West Coast Lumbermen's Association that vessels now lying idle in the Columbia River and Puget Sound districts will be released to carry ties to the Atlantic Coast, via the Panama Canal.

Plans for what will be the fastest passenger vessels on the Pacific Coast are being prepared by the Pacific Steamship Company for use on the San Francisco-Puget Sound run, according to A. F. Haines, vice-pjresident and general manager of the company.

A ruling of internal revenue headquarters may compel the Seattle Port Commission to pay wharfage war tax and its employees to pay an income tax. The Port Commission was previously exempt, but the Government says it is a utility organized to make money.

The Pacific Steamship Company does not expect to get back the liners "Yale" and "Harvard"; they were sold outright to the Navy, which plans to keep them in the service. The "Yale" and "Harvard" formerly plied between San Francisco and San Pedro.

Further decline in the number of men employed in the wooden shipyards of the Oregon district is shown by the last statistical report compiled by Captain Hiram E. Mitchell of the Emergency Fleet Corporation. At the present time the total number of employes in the wooden yards of the district is 3369, divided as follows: Hulls, 2353; in general, 707; in offices, 274; in plant work about yard, 35.

Eight of the twenty-seven wooden steamships built in British Columbia yards to the order of the Imperial Munitions Board since arrival in the United Kingdom have been sold to the French Government. These comprise the first eight ships dispatched overseas, namely: the "War Yukon," "War Nootka," "War Songhee," "War Puget," "War Selkirk," "War Caribou," "War Comox" and "War Masset."

Assignment by the shipping board of the wooden steamer "Wanzu" for operation by the Columbia Pacific Shipping Company is the first real step toward actual operation of the new Portland firm. The vessel of the Hough type of wooden ships, the wooden steamer "Ashburn," built by Supple & Ballin, has also been assigned to the Columbia Pacific Company. The "Ashburn" is a 4,500-ton vessel. Both will carry ties to the Atlantic coast.

The Pacific Mail Steamship Company has chartered the new steamship "Chipchung" to load the latter part of April for Manila, Singapore and Calcutta. This will be the maiden voyage of the vessel. The "Chipchung" was constructed at the yards of the Moore Shipbuilding and Dry Dock Company last year. It is probable other new vessels will be put on the Oriental run by the Pacific Mail and other big companies.

Harry Levison, manager for the Peterson Launch Company, announced recently that he had arranged to make a test of the Coolidge propeller for the new launches. These are built at Seattle and are said to have a new shape, with a large area of surface. They have less pitch and are believed to slip less than the regulation type. Levinson said he expected to increase the speed of the launches about two miles with the new propellers.

All lumber orders placed in the Northwest for shipment to Texas points, to be used in ship construction, have been cancelled. The cancellations amount to 6,000,000 feet, of which approximately half that much was to have gone out of the Columbia. The orders were placed originally through the fir production division of the Shipping Board. A large part of the lumber shipped to Texas was keel timbers for the wooden shipyards of the South.

Ken Kanda, passenger agent of the Toyo Kisen Kaisha, who is back from a flying trip to the Orient, says that details of the proposed combine of Japanese shipping companies are being arranged in Tokyo. It is stated the combination will include the Toyo Kisen Kaisha, Suzuki & Co., Harima and Kobe Drydocks, Teikoku Kisen Kaisha, Uchida Kaisen Kaisha, Toba Dockyard Company and the Asano Shipbuilding Company. American capitalists and merchants have been invited "in" on the merger.

The new Crowley house barge, which has been under construction at the Oakland shipyard of the company, was successfully launched recently. Walter Westman, the manager of the plant, said he hoped to have the craft ready to go into commission in about one month. This is the biggest barge of the type to be built here. It will carry 2500 tons measurement, or about 1500 tons dead weight. There will be six hatches and it will be possible to work cargo from two ship hatches simultaneously. The barge will accommodate 23,000 cases of oil and will prove a great time saver in handling case oil from shore to stream.

The two new steam whalers, which have been built for the Sea Products Company on the Atlantic, have sailed from Harbor Grace, Newfoundland, and are now en route to San Francisco, according to advices received by the marine department of the Chamber of Commerce. They are the "Hawk" and "Port Saunders." Upon arrivad here they will be used in whale catching off the California coast and the catches will be taken to the company's works at Moss Landing. The tug "Hercules," used now for the work, will then be released to Walter S. Scannell, the purchaser. Scannell said that he will use the "Hercules" for general bay and river towing.

Extension of the Toyo Kisen Kaisha Steamship Company's regular service to Calcutta in the near future—paralleling the Pacific Mail's steamers on that run out of San Francisco—was announced by K. Kanda, local passenger agent of the line. Kanda said that Captain S. Togo of the T. K. K. had left for Calcutta, for the purpose of arranging the docking accommodations of the T. K. K. ships to come here. The freighter "Shinyo Maru No. 2" arrived in San Francisco recently with a cargo from Calcutta. That the T. K. K. will have two new 9,000-ton freighters in trans-Pacific operation within the next few months also was announced by Kanda. He said that the steel freighter "Choyo Maru" was nearing completion at the Asano dockyard and the "Koyo Maru" is ready for launching at the Uraga yard. Both these vessels will be used on the San Francisco run.

Henry P. Vaughn, supervisor of the United States Shipping Board Navigation and Engineering School, paid an official visit in the course of his tour of inspection to the University of California, and was received by Professor C. L. Corey, dean of the College of Mechanical and Electrical Engineering, who presented a report of the activity of the Shipping Board School. Vaughan expressed himself as being highly pleased with the work of the Shipping Board School at the University of California and told the instructors at the school that the showing made by the University of California had so impressed the leaders in charge at Boston that this school had been selected as one of those to be continued indefinitely. Of the students who graduated from the school up to date only one failed to qualify before the United States inspectors when they had served their proper time at school.

In view of the enormous and continuing expansion of the vegetable oil trade, the project of the State Board of Harbor Commissioners to create a terminal for Oriental oils on Islais Creek is the most important undertaking of the Board for years, said President John H. McCallum recently. The Board, he said, proposes to throw open to lease to parties who will build tanks and equipment for the storage of vegetable oils some seventeen acres of the 200 owned by the State between Islais Creek, Arthur and India streets, and the water front. It also proposes to erect a building for the handling of case oil, to provide a pumping plant to handle oils for leasers between ship and tank, and to dredge Islais Creek to thirty-two feet. The Board is asking the Legislature for authority to do these things. Senate Bill No. 323 is the empowering measure now up at Sacramento. "The proposal," said McCallum, "is to lease these lands only to persons who will use them for this specific purpose. The vegetable oil business has grown so big that unless San Francisco wants to lose it to some other port, and with it the great amount of other business that goes with it, we must make some provision for handling the oil when the ships bring it in here."

Establishment of general recruiting agencies in San Francisco drug stores and similar public places by the United States Shipping Board's Sea Training Service, for the purpose of recruiting deck and fireroom men and stewards for the American merchant marine, was announced by Henry Avila, director of sea training in this district. The announcement followed the receipt of a telegram from Henry Howard, national director of sea training, which called for the recruiting immediately at San Francisco of 250 men as its quota. Howard wired instructions to resume enrolling, which was suspended several weeks ago, and asked that the 250 men to be recruited here be signed on the basis of 33⅓ per cent. for each branch of the sea training service. He added that the recruiting agencies are to give preference to discharged army and navy men. The sea training bureau operates the "Iris" and "Ocean Wave" here, where men are given preliminary training. Seamen apprentices are given instruction in seamanship and navigation, with the possibility of achieving command of a ship eventually; fireroom apprentices have the incentive of becoming engineers, and the stewards are trained in duties that will fit them to become chief stewards and pursers.

F. R. WALL, who was for many years an officer in the United States Navy, is now practicing marine law in San Francisco. He gives claims of all seafarers careful attention. 324 Merchants Exchange Bldg., 3rd Floor, California St., nr. Montgomery. Phone, Sutter 5807 .(Adv.)

Changes in advertisements must be in by Saturday noon of each week.

To insure a prompt reply, correspondents should address all communications of a business nature to the Business Manager.

Entered at the San Francisco Postoffice as second-class matter. Acceptance for mailing at special rate of postage provided for in Section 1103, Act of October 3, 1917, authorized September 7, 1918.

NOTICE TO CORRESPONDENTS.
Communications from seafaring readers will be published in the JOURNAL, provided they are of general interest, brief, legible, written on one side only of the paper, and accompanied by the writer's name and address. The JOURNAL is not responsible for the expressions of correspondents, nor for the return of manuscript.

WEDNESDAY APRIL 16, 1919.

THE "PUAKO" CASE.

Some four or five weeks ago brief reference was made in these columns to the "red record" doings on board the American barkentine "Puako." The news of the case to hand at the time was rather meager. The master of the "Puako," it was stated, and his two sons (signed on as mates), had been arrested at Cape Town, S. A., and were en route to the United States to stand trial for causing two members of the crew to jump overboard, and cruelly abusing and ill-treating the remainder of those on board during the entire voyage from Victoria, B. C.

Comes now more detailed information. The prisoners have been confined in the Tombs, New York City, for several weeks. On April 1st indictments charging murder on the high seas were returned by the Federal Grand Jury against Capt. Adolph Cornelius Pedersen, master of the "Puako," and his son, Adolph Eric Pedersen, who was second mate on the vessel. It is alleged in the indictment that their cruel and inhuman treatment caused Axel Hansen, a member of the crew, to leap overboard, and that they thereupon frustrated efforts on the part of other members of the crew to rescue him.

Three more indictments against the pair were also presented, alleging felonious assaults on, and maltreatment of, four other sailors who made up the balance of the crew. The latter indictments also name as co-defendant the other son of the captain, Leonard Roy Pedersen, who was first mate of the vessel.

The indictments are said to be the first charging murder on the high seas presented in the New York Federal Court in a quarter of a century. Incidentally it is stated that Capt. Pedersen is known to seamen generally as "Hellfire Pedersen." This, in the vernacular of the old Liverpool packet rats, stamps him "a bleedin', blinkin', 'oly terror"—and then some. Anyway, the designation is suggestive enough without any added comments from us.

The death of Hansen, according to witnesses, occurred on August 6th of last year. For months before that he had been subjected to almost daily beatings by the captain and his son. He had also been imprisoned and deprived of proper food. As a result he was at the time of his death in a greatly weakened condition physically, and suffering much pain.

Came then the final attack on him by the captain and the second mate. Unable to endure his misery and torture any longer, Hansen broke away from the two brutes and leaped over the ship's side into the sea. The skipper and the second mate pursued him to the very rail of the ship, landing blows and kicks on the unfortunate man till, in desperation, he took the fatal plunge.

But the love of life is strong in all of us. As Hansen drifted astern he grabbed hold of the log line trailing after the ship, in an evident effort to save himself. Seeing this his shipmates rushed aft to assist him. Just how they acted in the emergency is not related in the dispatches. Presumably the man at the wheel put the helm hard down so as to get the sails aback, and thus stop the ship's headway, while the others got ready to lower the boat hanging in the davits over the stern.

At this juncture the innate, hellish brutality of the Pedersens showed itself in its true nature. Capping the climax of a dreadful situation they set upon the would-be rescuers with curses and kicks, and drove them off the poop. Hansen was left to drown in plain sight of everybody!

What sort of treatment the other members of the crew suffered at the hands of the scoundrelly Pedersens during the voyage may be imagined. At present they are being detained by the Government as witnesses against the Pedersens. From the foregoing it is also apparent that the statement in earlier dispatches that two members of the "Puako's" crew had been driven overboard to their death was unfounded. However, the truth regarding the matter will now be brought out in court. As the trial progresses the Journal will keep its readers posted on the further developments of the case.

Attorney Silas B. Axtell, of New York, has been instructed by the International Seamen's Union of America to co-operate with the Federal attorneys in the prosecution of the Pedersens. As bearing upon the case Mr. Axtell writes the Journal as follows:

> The witnesses, whose names have been forwarded in a letter to the agents of the Seamen's Union recently, are being detained by the United States Marshal of the Southern District of New York. Letters, packages, etc., from their friends and other seamen who desire to encourage and comfort them in their efforts to bring about justice should be forwarded in care of the U. S. Marshal, Southern District of New York. Such letters and gifts, etc., will tend to encourage these men and improve their morale.
>
> It is no joke being detained as they have been for four or five months already and being practically punished by being rid of their liberty, in an effort to do justice and to see that this captain gets the punishment the law prescribes. If these seamen were to be turned loose, they would no doubt be set upon, shanghaied and driven away. They have to be detained for their own protection.
>
> The great body of seamen who are being benefited by their action should do something to express their appreciation of the efforts of these brave seamen. The names of all these seamen have been forwarded to agents of the Seamen's Union, and any seaman who desires to send a letter or otherwise express his gratitude to these fellows for what they are doing, can do so by sending his communication to—Government Witnesses in Barkentine "Puako" Case, c-o U. S. Marshal, Post Office Building, Southern District of New York, New York City.

The JOURNAL earnestly urges seamen everywhere to act as soon as may be on Mr. Axtell's appeal. Do what you can, mates, to help brace up and encourage the witnesses in the "Puako" case. They are fighting your battle. Make them feel that you are with them in their laudable effort to bring deserved punishment on those thorough-paced, murdering buckoes, Capt. Pedersen and his two precious sons. Mr. Axtell informs us that it is a clearly established case of murder. So go to it boys. Do your bit towards making American ships safe for seamen. Sit right down and write the "Puako" witnesses a nice little letter telling them how much you appreciate their stand. Cheer them up and lighten the tediousness of their confinement, to the end that the "Hellfire Pedersens" may get their due.

PACIFIC SHIPOWNERS ORGANIZE.

Representatives of the leading steamship companies operating out of Pacific Coast ports are taking steps to form a new association to be known as the American Shipowners' Association of the Pacific. A preliminary meeting of the projectors of the plan was held in San Francisco last week, at which a committee on organization was appointed, headed by A. F. Haines, vice president and general manager of the Pacific Steamship Company. Speaking on the need of the projected association, Mr. Haines is quoted as saying:

> "I may say that this move is a practical result of a suggestion from the United States Shipping Board. At Washington we found that the Government agencies dealt direct with the American Shipowners' Association on matters involving Eastern shipowners. When they sought to do the same on Pacific Coast matters they found no organization except the present Shipowners' Association. Many Washington officials believe this comprises all the shipping interests on the coast.
>
> "The proposed association is both feasible and necessary. There are many matters that should be taken up with the United States Shipping Board by a unified organization, and that organization should be formed forthwith, not only for the welfare of the Pacific Coast, but for the benefit of the Government and the nation generally."

Besides the present Pacific Coast Shipowners' Association, the new association will, according to reports, include the following companies:

> The Pacific Steamship Company, Pacific Mail Line, Matson Navigation Company, Oceanic Steamship Company, W. R. Grace & Co., Crowley Company, Redstack Towboat Company, Associated Oil Company, Standard Oil Company, Pope & Talbot, and Williams-Dimond Company.

The American Shipowners' Association of the Pacific will control about 1,000,000 tons of shipping when it is finally organized. It is somewhat significant that Japanese shipowners are excluded from the Association, as are also small British and Mexican shipping interests. Possibly the organizers of the new concern really mean it to be what its name (The American, etc.) seems to stand for. If so, more power to them.

AT THE CROSS ROADS.

Confronted with the necessity of choosing between allegiance to their constituents "back home" and their fealty to Senator Penrose, Senator Lodge and the other reactionaries in Congress, what will the Republican "Progressives" do? There is no doubt they will have to make a choice. The next Congress will be dominated by the Old Guard—that element which was

driven from power by the Democrats. It is fair to assume that many Republican voters of the Middle West and Far West are still sincere and resolute in their opposition to these prophets and exponents of reaction, with whom they have nothing in common. It is equally reasonable to suppose that these "folks back home" will expect their "Progressive" representatives in Congress to keep the faith.

Here, then, is a situation that all may watch with interest if not with hope. The "Progressives" are all "dressed up." There is an invitation from Boss Penrose and his reactionary associates to return to the Old Guard and the old ways. There is likely to be an urgent appeal from the plain people at home to remain aloof from these charmers and stand true to the progressive principles.

"Progressive" Senators and Congressmen are indeed "dressed up," but where will they go? Will they go forward or backward?

THE WAY TO DO IT.

It has often been said in similar language—but here it is again for all it is worth:

The way to make friends is to be friendly; the way to promote fraternity is to be brotherly; the way to secure harmony is to yield pleasantly to the will of the majority; the way to be happy is to make others happy; the way to conquer an enemy is to return good for evil; the way to secure the respect of your union is to show deference for the opinion of those who differ with you, and instead of kicking at everything that is done, put your shoulder to the wheel and help roll it along; the way to make yourself a useful member of the union is to take part in the deliberations of the union—not at the street corner, but in the meeting halls; the way to work for the good of the union is to induce other members to read the JOURNAL and other literature issued by the union and thus keep abreast of the times; the way to make your life bright is to carry sunshine with you.

And finally, the way to be a true member is to do unto others as you would have them do unto you.

Readers of the JOURNAL will be pleased to learn the following from the Illinois State Federation of Labor News Letter: "After a long and severe illness as a result of a complete nervous collapse, a turn for the better has finally come and Victor A. Olander (for many years Secretary of the Sailors' Union of the Great Lakes) is slowly recovering his health. Olander lost steadily for several months and was reduced to about one hundred and fifty pounds. He is still in a very weakened condition and it will be some time before he will be strong enough to undergo the operation necessary to remove the cataracts that are growing on his eyes. The fact that he has taken a turn for the better and is slowly improving brings relief and gladness to his many friends in the labor movement."

Now then, boys; a long pull, a strong pull, and a pull all together for a national 8-hour day and a 44-hour week.

When competition won't, co-operation will.

SHIPOWNER MULCTED.

Seaman Awarded $1500 For Loss of Index Finger.

Editor Seamen's Journal:

I enclose a copy of decision of Judge Edward L. Garvin, Judge of the United States District Court, Eastern District of New York, in the case of Hubert vs. Masaba.

This action was brought in admiralty and decides that even where the laws of the place or the land of surrounding waters in which the vessel is, when an accident occurs, there is no liability in rem; still when the vessel comes within the jurisdiction of a court of admiralty of the United States, the lien in rem attaches.

This decision necessitated investigation into far extending ramifications of the law. Questions of "lex fori" and "lex contractu" have been much debated in the past. They seem to be still debatable as indicated by the memoranda of law filed by the attorneys on both sides.

Messrs. Burlingham, Veeder, Masten & Fearey, one of the largest admiralty firms, took the view that a tort on board a French vessel while in Canadian waters should be governed either by the law of Canada where there was no lien in rem recognized or else by the law of France, the law of the flag, which likewise recognizes no lien. That therefore, the seaman, a Norwegian, who resided in Brooklyn, should have no remedy against the vessel, but be compelled to proceed against the owners in personam, if he could find them. On our side it was contended that the decisions of the Supreme Court, recently handed down in the case of Jensen vs. Southern Pacific; Chelentis vs. Luckenbach and Workman vs. New York City, controlled the case. In other words, the policy of the Supreme Court seems to be, to make the laws of the sea uniform. The general maritime law shall determine the liability of the ship, whether she be in a port of the United States or Buenos Ayres, Liverpool or any other place, unless, of course, there is to the contrary, a local mandatory statute.

This is a very interesting question. It works out harmoniously with the Seamen's Act, for that act is a local mandatory law. All ships coming within the ports of the United States enter those ports subject to the conditions imposed by our laws, one of which is that seamen shall be paid half wages on demand; that seamen shall not be arrested for desertion, etc. With the exception then of the local mandatory law, the maritime law is the same all over the world and the liability of ships, no matter under what flag they operate, should be the same.

We come back to the question of what law can be enforced in the forum. It is a broad proposition, but it would seem that no law made and applicable outside the forum can be enforced in the forum if it is contrary to the public policy of the forum, but again we come up against the decision of the Supreme Court in the Nielson-Rhine and Talus cases, where legal effect is given to a continuing contract for payment of wages and the courts are compelled to give legal effect to payment of wages made in advance of the time earned, although our local mandatory law says that in no case shall the payment of such wages be a defense to a suit or action brought to recover the same. The minority opinion, with all due respect to the court, seems stronger, more logical, and comprehensive than the majority opinion of the court, but the majority opinion aligns itself with the general embodiment of the maritime law above reviewed by stating that it could find no evidence on the part of Congress of an intention to make the section as a whole, apply to advances made outside the territorial jurisdiction of the United States.

A ground there has been taken that is not subject to attack The only remedy would seem to be an amendment of the section, definitely expressing the will of Congress.

The Masaba opinion is a very important one to seamen, especially as the award for the loss of the first finger, $1500, is a substantial award and one which might be conceivably handed down by a jury and I should say, under the circumstances, was fair to both the ship and the man. S. B. AXTELL.

The court decision referred to by Mr. Axtell follows:

United States District Court, Eastern District of New York. March 24, 1919.

Emanuel Hubert against Steamship "Masaba."

Silas B. Axtell, proctor for libelant.

Burlingham, Veeder, Masten & Feary, proctors for claimant.

Libelant has libeled the steamship "Masaba," a French ship. He was injured at Montreal, Canada, while assisting in making fast to a pier the boat in question, of which he was first officer. A wire cable, which he was adjusting, cut the first finger of his right hand, infection set in, and the finger had to be amputated. The cable was rusty and its threads were broken and protruding so that it was not in proper condition for use. The owner of the boat,

OFFICIAL.

SAILORS' UNION OF THE PACIFIC.

Headquarters, San Francisco, Cal., Apr. 14, 1919.
Regular weekly meeting came to order at 7 p. m., E. A. Erickson presiding. Secretary reported shipping fair.
JOHN H. TENNISON,
Secretary pro tem.
Maritime Hall Bldg., 59 Clay Street. Tel. Kearny 2228.

Victoria, B. C., April 7, 1919.
No meeting; shipping slow; members scarce.
J. ETCHELLS, Agent.
Room 11, de Cosmos Block, 1424 Government Street.

Vancouver, B. C., April 7, 1919.
Shipping fair; prospects good.
W. G. MILLARD, Agent.
58 Powell Street E. P. O. Box 1365. Tel. Seymour 8703.

Tacoma Agency, April 7, 1919.
No meeting. Shipping and prospects uncertain.
H. L. PETTERSON, Agent.
2016 North 30th St. Tel. Main 808.

Seattle Agency, April 7, 1919.
Shipping medium.
P. B. GILL, Agent.
84 Seneca St. P. O. Box 65. Tel. Main 4403.

Aberdeen Agency, April 7, 1919.
No meeting. Few men around; shipping fair.
ED. ROSENBERG, Agent.
P. O. Box 280. Tel. Main 557.

Portland Agency, April 7, 1919.
Shipping good; prospects good.
JACK ROSEN, Agent.
88½ Third Street. Tel. Main 6013.

San Pedro Agency, April 7, 1919.
Shipping fair.
HARRY OHLSEN, Agent.
128½ Sepulveda Bldg., Sixth St. P. O. Box 67. Tel. 137 R.

Honolulu Agency, March 31, 1919.
Shipping poor; prospects poor.
JACK EDWARDSON, Agent.
P. O. Box 314. Tel. 2526.

MARINE COOKS' AND STEWARDS' ASSOCIATION OF THE PACIFIC COAST.

Headquarters, San Francisco, Cal., Apr. 10, 1919.
The regular weekly meeting was called to order at 7 p. m., Ed. Andersen in the chair. Secretary reported shipping slow. The full shipwreck benefit was ordered paid to one member wrecked on the bark "Albert."
EUGENE STEIDLE, Secretary.
42 Market Street. Phone Kearny 5955.

Seattle Agency, April 2, 1919.
Shipping fair; shortage of galley- and messmen.
LEONARD NORKGAUER, Agent.
Grand Trunk Dock, Room No. 203; P. O. Box 214. Phone Main 2233.

San Pedro Agency, April 2, 1919.
No meeting. Shipping good; very few men ashore
JOE MACK, Agent.
613 Beacon St. Phone Sunset 336. P. O. Box 54.

DIED.

Ole Eikland, No. 951, a native of Norway, age 28. Died in the wreck of the S. S. "Dumaru," Oct 16, 1918.

Possible loss to San Francisco of a large part of the Oriental export trade in raw materials was seen by shipping men, in a report that the Toyo Kisen Kaisha is contemplating the establishment of a direct line of freighters between Japan and New Orleans, Cuba and Porto Rico. K. Doi, San Francisco manager of the company, has been called to Japan for a conference. It is understood that he is taking with him data on comparative freight rates between Eastern points and San Francisco and New Orleans, tending to show that commodities can be loaded more cheaply at the Gulf port than here.

OUR WASHINGTON LETTER.

(By Laurence Todd.)

Thirty-five thousand strikers from the woolen mills in Lawrence, Mass., and 12,000 strikers from the silk weaving mills in Passaic, N. J., and many thousands of textile strikers in Paterson, West Hoboken and other New Jersey towns, have been taken into the independent labor organization which thus far has been known as the Amalgamated Clothing Workers of America. They have left their various affiliations with A. F. of L. or independent unions to join the Amalgamated since the latter has changed its constitution so as to include all workers in cloths as well as clothes and clothing. The reason which has brought them into the big independent union appears to be the fact that the Amalgamated offered them powerful aid in getting the 44-hour week in place of the 48-hour week which their former leaders considered sufficient.

This development is being watched with keen interest by Labor Department, War Labor Board and American Federation of Labor officials, who believe that it may lead to an industrial organization of the textile and clothing industry as complete as now exists in the coal mining industry. Examiners for the War Labor Board consider the Passaic-Lawrence-Paterson movement to be the natural outcome of the get-together spirit which War Labor Board awards in Bridgeport, Pittsfield, Schenectady and other places have stimulated. The first step taken was to invite in, as advisers in strikes which were well along, the organizing force of the Amalgamated. The second step was the calling of a conference for next week, at which delegates from all of these textile workers will vote on affiliating formally with the Amalgamated or upon establishing a textile union of their own which will have an alliance with the Amalgamated.

In either case, the labor movement in the East is to-day faced by a development which is similar to that now taking place in England—a breaking away from old conservative leadership to go with a young and aggressive organization which offers more radical demands and more frequent strikes. The United Textile Workers remain in the textile field as the representatives of the American Federation of Labor, but it is evident that sooner or later the membership of the United Textile Workers and the International Ladies' Garment Workers and the United Garment Workers must get together with the Amalgamated Clothing Workers and the United Cloth Hat and Cap Makers, in order to fight the employers effectively. Either the A. F. of L. will take back the independents under a general agreement that the cloth and clothing industry shall be organized on an industrial basis, or else the independents are likely to develop very much faster than the other organizations, and possibly be joined by some now within the A. F. of L.

This, at least, is the consensus of official opinions here.

It may be of interest, by the way, to state that the Lawrence textile strikers include 10,000 Italians, 5,000 Poles, 4,000 Germans, 3,000 Lithuanians, 1,400 Franco-Belgians, 1,000 Russians, 800 Greeks, 500 Armenians, 350 Jews and 800 Portuguese. There are 400 Portuguese and 250 Armenians at work, along with 75 Italians, 75 Germans, 50 Polish, 14 Lithuanians, 12 Greeks, 10 Franco-Belgians, 10 Russians and 5 Jews.

Whether the spurt taken by radical unionism in the East be partly responsible for it or not, a very decided change in the tone of Eastern newspapers toward labor's rights in America is to be observed this week. The Patullo article in the Saturday Evening Post, supporting the stand against militarism at home which the labor movement has taken, is only the mildest of these indications. Cartoons by McCutcheon, and editorials sprinkled through most of the junker press tell a story of alarm over what organized labor may do to its stubborn enemies. The fact that the Labor Party in Chicago polled less than ten per cent. of the total vote in the municipal elections has fooled nobody. Big business men know that the real question this year is not the political vote but the strike vote.

The Employers' Industrial Commission which has returned from Europe to report to the Secretary of Labor upon the new industrial conditions in England, has issued a note of warning to employers.

"The issue," they say in their report, "is squarely drawn on the demand of the working people to have a better industrial day. They seek not merely small non-essentials, nor commonplace essentials, but a real step forward in their conditions of life and labor.

"Interviews with many of the workmen tend to indicate that 'unrest' is rather an inadequate term. There are many intimations of 'direct action' and a complete overturning of the present social structure. But we believe the more extreme demands are largely limited to a class which has been thinking and talking along these lines for years."

British employers, they say, are almost a unit in favoring collective bargaining, and in wanting to deal with the regularly established unions. The employers have had enough of fighting the unions; they are convinced that unions give stability to the industries. The conservative labor leaders and conservative unionists agree with the employers in opposing the radical unionists who propose a peaceful social revolution. The Commission feels that even the radicals in Britain do not expect to start a complete social change at once, but to get at it slowly, through a period of years. Yet even so, they believe that the progress of social revolution is becoming more popular, and that unless American employers "quickly change their ways," there will be serious unrest in the United States.

The British Trades Union Congress is perhaps a bit more aggressive than these American employers thought. Yesterday it adopted, by acclamation, a resolution demanding the withdrawal of all British troops from Russia, the withdrawal of the military conscription bill from Parliament, the raising of the food blockade against Russia and Hungary, and the immediate liberation of conscientious objectors. Robert Smillie, head of the Miners, and head also of the Triple Alliance of the Miners, the Railwaymen and the Transport Workers, who offered this resolution, declared that the Miners would strike for the removal of military conscription and the raising of the blockade. War Minister Churchill announced in the House of Commons that conscientious objectors who had been in prison two years would be set free.

Paris correspondents feel sure that the United States and Britain are about to recognize the Russian Soviet government, as a means of quieting the sort of labor protest illustrated by the action of the British Trades Union Congress, and as a means of stopping Bolshevist propaganda in Western Europe. One of the first things which will happen, following such a recognition of the working-class rule in Russia, will be the sending of a big Russian labor mission to this country, to visit the principal trade union centers and to talk over world-wide labor relations, face to face. Similar Russian labor missions will visit all other nations which offer peace. Since the American and Allied troops are to be withdrawn from Russian and Siberian soil this spring, it is quite possible that a mission from Soviet Russia will be among the visitors at the convention of the American Federation of Labor at Atlantic City in June.

Any such mission will, of course, be expected to refrain from political propaganda of any kind while in this country. It will probably be made up of men high up in the leadership of Russian labor, men who speak English, and perhaps have served their time in Siberian prisons under the late-lamented Czar. They will come to learn directly of American trade union methods, and to give information of what has been won by Russian labor since the old regime was overthrown.

Whether the Russian and Hungarian situation has anything to do with the President's taking up the question of pardoning Eugene V. Debs is a matter of guessing. Frank P. Walsh has joined with a number of former Socialists in asking that Debs be given a stay of imprisonment until the matter of a pardon shall be considered. Secretary Tumulty at the White House gave out the news that the President had asked for information and advice on the case, before the Department of Justice got the same news from Mr. Tumulty. Over in Europe Debs is considered by the Socialist masses to be one of the great war martyrs, just as Liebknecht was considered while he was in prison in Germany. After all, the Paris treaty will not settle anything for long unless the masses of the people decide that it is a democratic document, to be carried out by sincerely democratic leaders. They have never understood why Debs was sentenced to prison at the very moment that President Wilson was winning his fight against the reactionary diplomats in Paris.

The High School Teachers' Union, the Grade Teachers' Union, the Federal Employes' unions, and the Women's Trade Union League here are engaged in a battle royal with the Board of Education, which has fined Miss Alice Wood, a teacher of English in Western High School, one week's pay for having made a statement in class that the Bolsheviks are not Nihilists. She was given no trial, and has not yet been granted more than an "informal" questioning as the basis for the action of the Board. More than that, high school teachers were forbidden for some time to discuss either the League of Nations or Bolshevism as one of the "current topics" in their classes. Protest by the organized teachers and Federal employes in the city has resulted in the Board's graciously permitting the discussion of these topics once

more. But after a long secret session this Board refused to withdraw the punishment or give her a hearing. The case will now be taken to the courts by the organized teachers. They point out that the arbitrary action of the Board leaves the teachers with absolutely no security of either salary or employment, much less any freedom of opinion.

The Board is selected by Federal Judges in the District of Columbia, who hold office for life. One of the judges until recently was the notorious Daniel Thew Wright, who tried to send Messrs. Gompers, Morrison and Mitchell to jail. The chairman of the Board is head of a street car company; another persecutor is a bank president; another is employed in the Naturalization Bureau; another is in the Department of Justice. There are, of course, no labor spokesmen nor educators on the Board!

Even the organized small business men have realized that the deal is too raw to go down, and they have proposed that Congress shall pass a law permitting the people of the District of Columbia to elect their own school board.

THE "FLU" IN CAPETOWN.

Graphic details of the terrible sufferings of Capetown from the influenza scourge are contained in a private letter from the head sister of the New Somerset Hospital, which is reprinted in the London Times.

"We have had a most terrible time in Capetown, and in fact all over South Africa with Spanish influenza. It has upset everything; the rush in Capetown has been so dreadful that every one who was not ill has been worked to the limit. At first we laughed and joked about the 'flu,' but in a few days people began to be ill by dozens; the sickness was very violent, very short, and very fatal. Before the first week was out they were dying as if with a plague, by the scores, and later by the hundreds. The deaths started at twenty a day, and before many days were over mounted up to 500 and even 600 a day. In two weeks 6000 people died, and Capetown was like a city of the dead. In the hospital here the servants took ill first; then all the laundry people, then porters and ward maids; last of all the doctors and nursing staff. The people died in the streets; at one time big covered wagons patrolled the streets to pick up the dead. A house-to-house visitation was started, and the most terrible state of affairs was discovered; whole families stricken, the dead and living in the same beds, no food in the house, no one able to crawl about to get it; hundreds of people starving because they could not go out to get food; all delivery carts stopped, no one to drive them; shops shut, the people being ill; business houses shut up; trains and trams stopped running; theaters, bioscopes, and churches all empty and closed. It was like the Great Plague of London.

"In the great cemetery six miles out of Capetown there were no people to dig the graves; people carried their friends and relatives from a motor-car to the plots, and had to dig the graves themselves; often they were so weak that they could only dig two or three feet deep, and as they turned to get the body they had brought other people came and threw the bodies of their friends into the graves others had dug; fights ensued, and the scenes were terrible. No clergymen or priests to bury any one. At the height of the plague there were no coffins, and the people, rich and poor, were buried in blankets. The bodies turned black some hours before death, and the stench from them a day, or even two days, before they died was like a pestilence. Relief parties were organized, and the military were called out to dig graves. Doctors and nurses worked till they dropped, and others, to keep themselves well, never went to their homes, but slept somewhere else with the door locked, as otherwise they could get no sleep.

"Telephones were not used—nearly all the exchange people ill, and the doctors disconnected their 'phones, as otherwise the thing never stopped ringing. The town and suburbs were portioned out to the doctors who kept well, and if they fell ill that district was left without a doctor.

"In the hospital here we were crowded out, and all the staffs short. On night duty it was terrible; at times we had 400 patients, and several times I only had ten nurses on duty. My nurses worked like heroes; never can I tell how fully they lived up to the highest traditions of their profession. Young nurses, most of them, we were all working at more than our best, the dead and dying all around, and death in a terrible form, too, many shrieking to the last in a terrible delirium. Yet my nurses never faltered; they knew it was almost impossible for them to escape getting it; still, steady, brave, loyal girls, they never failed me, and at times I had to ask such big things of them; none ever said 'No.' Night after night some of them got ill and had to be forced to bed; when there were no others left to take their places those remaining on duty did double work. How we did it I do not know. Out of a staff of 110, only twelve or fourteen escaped the disease. All the doctors were down at one time or another; we lost one doctor and one of the porters. Although many of the nursing staff were very near death, we saved them all."

AN UNKNOWN LAND.

The man in the street is, perhaps, more interested in Siberia to-day than ever before. It is an extraordinary land—one of the biggest, and certainly the loneliest, on the globe. It contains nearly five million square miles, being bigger than Europe, and about forty-five times bigger than the British Isles.

Although it is about seven thousand times bigger, yet the population of the whole of Siberia only exceeds by a million that of Greater London.

That means that there are hundreds of thousands of square miles where a human being is never seen.

The railway which connects Siberia with Russia forms the greatest undertaking of its kind in the world. The total distance it covers from Petrograd to Vladivostok is 6,521 miles, and to Port Arthur 5,913 miles.

At Yakutsk, one of the chief cities of Siberia, is one of the seven wonders of the world. It has a frozen well of which no one has been able to find the bottom. In 1829 a Russian merchant tried to find the depth of the frozen stratum, but thirty feet down he gave up the task. Then the Russian Academy of Science took up the digging, but at 382 feet the earth was still frozen as hard as a rock. The scientists were puzzled. Natural cold, they urged, could never penetrate to such a depth. No explanation of Yakutsk's frozen well has yet been found.

CHILD LABOR.

Last year the number of boys of 15 and 16 and girls between 16 and 18 entering employment for the first time increased 35 per cent., with a corresponding decrease in the school records. There is a 25 per cent. increase in the juvenile delinquency in courts, and the offenses, for which children are brought into court are more serious. The effect of long hours upon children cannot be ignored. In North Carolina for instance hundreds of children under 14 were immediately set to work on a sixty-hour week. Children all the way from 5 to 14 years of age have been found employed by representatives of the Children's Bureau. It is necessary that summary action be taken by the United States, for the States themselves have proved hopelessly unable to cope with the situation. In twenty-four States it is perfectly legal to work children of 14 more than 8 hours a day. The eleven-hour day for children is common in the United States. This is not a State problem. We have essentially the same conflict between industries based upon child labor and adult labor, that we had between industries operated by slave labor and free labor. They cannot exist side by side. One or the other must go.

Labor's Economic Platform

Following is the Economic Platform adopted by the American Federation of Labor:

1. The abolition of all forms of involuntary servitude, except as a punishment for crime.
2. Free schools, free text books and compulsory education.
3. Unrelenting protest against the issuance and abuse of injunction process in labor disputes.
4. A work day of not more than eight hours in the twenty-four hour day.
5. A strict recognition of not over eight hours per day on all Federal, State or municipal work, and not less than the prevailing per diem wage rate of the class of employment in the vicinity where the work is performed.
6. Release from employment one day in seven.
7. The abolition of the contract system on public work.
8. The municipal ownership of public utilities.
9. The abolition of the sweat-shop system.
10. Sanitary inspection of factory, workshop, mine and home.
11. Liability of employers for injury to body or loss of life.
12. The nationalization of telegraph and telephone.
13. The passage of anti-child labor laws in States where they do not exist and rigid defense of them where they have been enacted into law.
14. Woman suffrage co-equal with man-suffrage.
15. Suitable and plentiful playgrounds for children in all cities.
16. The Initiative and Referendum and the Imperative Mandate and Right of Recall.
17. Continued agitation for the public bath system in all cities.
18. Qualification in permits to build of all cities and towns, that there shall be bathrooms and bathroom attachments in all houses or compartments used for habitation.
19. We favor a system of finance whereby money shall be issued exclusively by the Government, with such regulations and restrictions as will protect it from manipulation by the banking interests for their own private gain.

WEEKLY NEWS LETTER.

(Continued from Page 3.)

prised his audience by "hitting below the belt."

He denied that rest rooms, shower baths, lunch rooms and other welfare work was for the benefit of the workers alone and declared that they were done to increase the workers' efficiency from which the employer derived a profit. The management, he said, deserved no credit from the workers' standpoint for the better conditions.

The speaker declared for the right of labor to bargain collectively, the right of the worker to improved housing conditions and better school facilities for his children, and predicted that the eight-hour day was inevitable.

When the Chattanooga man concluded his address, and the club members recovered their breath, they gave him a hearty "hand."

Leather Workers Gain.

President Bryan of the United Leather Workers' International Union reports that members of this organization employed on traveler's goods have shortened hours, increased wages and improved working conditions in a number of localities throughout the country. Harness and saddlery workers employed on commercial work are establishing the hours, wages and working conditions that the union has secured on government contracts.

After a four-weeks' strike leather glaziers employed by the F. Blumenthal company, Wilmington, Del., defeated an attempt to reduce wages 25 per cent. The solidarity of the men and women members of the Leather Workers' Union resulted in an increased membership to the union.

St. Joseph, Mo., tannery workers employed by the St. Joseph Tanning Company (Swift & Co.) adjusted their strike of 10 days. Future differences will be referred to Judge Alschuler, arbitrator in the packing industry.

Oppose Wage Reductions.

The business world need not expect wage reductions because wages are not high compared with prices, is the warning and advice issued by the Department of Labor through Roger W. Babson of the education and information service.

"I want to make it as clear as possible," said Mr. Babson, "that no possible wage reduction need any longer be looked for. In the first place, wages are not high compared with prices. Statistics show that prices have advanced, so far as the cost of living is concerned, about 65 per cent. in the United States during the war. Wage rates on the average have not increased that much.

"Business men can not be prosperous unless the workers are well paid. We are not making goods to sell to Mars, but to people right here in the United States—working people; and these people cannot buy anything if they are not working, and not much if they are poorly paid. The workmen are the consumers, and in that way furnish the real orders."

Break Agreement.

Several Madison metal trades employers have broken their agreement with employes that the National War Labor Board adjust wage differences. The board's award is now ignored by the employers.

In an editorial entitled "Madison's Real Bolshevists," the Capital Times says:

"Labor met the test and went back to work at a time when they could have enforced their demands with little difficulty. It was a gentlemen's bargain with employer and employe being signatory to the agreement.

"Labor stood by its word. The employer is now attempting to repudiate the agreement entered into. The employer, agreeing to submission under the sacred reason of patriotism, is now making hypocrisy of that covenant entered with labor and selfishly endeavoring to hang on to the disgraceful profits made during the war.

"What if labor had acted as the employers have done? What would be said about them? Wouldn't the forces of publicity which are so quick to assail the patriotism of the little fellow howl about a lack of honor and decency and patriotism?"

High Living Costs.

In its annual report on the statistics of manufactures for the year 1917 the Massachusetts Bureau of Statistics says that the per capita average yearly earnings of wage earners for all industries in this State advanced from $569.43, where it stood in 1913, to $758.23 in 1917.

This is an advance of slightly more than 33 per cent. in four years.

The statement by the Massachusetts bureau of statistics that wages as a whole have advanced 33 per cent. in four years sustains the claim of organized workers that so-called high wages that have been paid since the war started cannot reach high living costs.

The Massachusetts figures are compared with the report of the United States Bureau of Labor Statistics which shows that the cost of food prices as a whole advanced 43 per cent. between September, 1914, and September, 1917. These figures do not include increases in the cost of clothing, shoes, shelter and numerous sundries that are necessary for the maintenance of American living standards.

At last a head-on collision has occured between those two hearty enemies, the American Union Against Militarism and the National Security League. A joint debate on the subject of universal military training has been pulled off by a New York magazine, The Arbitrator, between Henry Litchfield West, executive secretary of the National Security League and Charles T. Hallinan, executive secretary of the American Union Against Militarism. The latter organization seems fairly content with the result as it has reprinted the debate in full, giving both sides, without any comment whatever. A copy which has reached our desk bears the address of the Union, 203 Westory building, Washington, D. C., and indicates that the price is five cents.

The gum of the pine seems to be practically indestructible, and to-day one of the chief exports of New Zealand is from the gum of kauri trees which died centuries ago. The wood has long since disappeared, but chunks of pure, amberlike gum are still dug from the old stumps.

Demand the union label upon all purchases!

JUSTICE AND THE EX-KAISER.

Almost every day we read of the steps being taken to bring the ex-Kaiser to "justice"—to punish him for the crime of having engineered the slaughter in Europe which has just concluded. But, strange to say, nothing of a tangible nature seems to have been done to bring the gentleman in question to the bar of justice. And if we are not very much mistaken, nothing much will ever be done.

As a matter of fact, the ex-Kaiser has more to fear from the knife or the bullet of an assassin than from the hands of the windy jingoes now clamoring for his head.

We are told that, having abdicated and assumed private citizen rights, there are "international" complications standing in the way of bringing the ex-Kaiser to stand his trial. This is so much piffle and hot air. No international complications stand in the way whatever.

What are the facts? British and French courts have already judged the ex-Kaiser guilty of murder. What follows? Since Holland is one of the world's nations, adhering to the law of extradition, all that is necessary is for either the French or British Governments to demand his extradition from Holland. Were he a working-class criminal, be sure they would not have hesitated so long before bringing him to the bar of justice. Neither would they have lost any time debating over "international complications" either.

Even supposing there was no law of extradition, they could still have secured him within twenty-four hours, if they wished. The British Government still possesses its war-time powers, and technically a state of war still exists between the Allies and the enemy Powers. They could demand that he be handed over, and handed over he would be. International rights did not stand in the way of the Allies when the coasts of Holland were forcibly blockaded, in spite of Holland's protests, nor when the British Government seized the Dutch shipping some time ago. Holland was forced to comply with the Allied wishes whether that country liked it or not. And if a demonstration were made demanding the body of the ex-Kaiser, we have not the slightest doubt that he would be handed over in quick time.

The plain fact is, that despite all the frothings of jingo politicians and the paid press, Capitalism in the Allied countries has no intention of making the ex-Kaiser pay the penalty for his alleged crimes.

And after all, what would it profit the world if one or a hundred ex-Kaisers were lined up and shot, or jerked into eternity per medium of the hangman's noose?

If the world's people devoted their attention to obliterating the system that makes for Kaisers, Czars, and the whole "divine right" business they would be making some progress worth talking about.

But while they get the idea in their heads that justice will be done simply by taking an ex-Kaiser's life, they have a very crude idea of the needs of humanity.—The Australian Worker.

"I look upon Conscription as the taproot of militarism; unless *that* is cut, all our labors will eventually be in vain."—General the Rt. Hon. J. C. Smuts, in memorandum prepared for the Peace Conference.

A PLEA FOR DISARMAMENT.

The provisions of the Constitution of the league of nations as adopted at Paris lend interest to the following discussion of the question of disarmament by G. Lowes Dickinson. The article appeared in the first issue (January) of the *League of Nations Journal and Monthly Report* published by the League of Nations Union of Great Britain. It reads as follows:

There is one truth which ought to become the basis of all efforts to abolish war. It is this. The principal cause of war is preparation for war. The fact that this should appear to most people, even now, to be not a truism but a paradox, shows how slow the obvious is to penetrate men's minds. Only the other day M. Clemenceau gave proof that he had learned nothing from the war and what led up to it by reaffirming his belief in the "balance of power," and then (of course) interpreting it as meaning the opposite of a balance, that is, a predominance of power in the hands of the liberal Powers. That, in fact, is what the balance has always meant. Every weight in it, so to speak, constantly striving to increase itself so that it may weigh the balance down. That is the root of the competition in armaments. The competition then breeds mistrust and fear. Every state or group of states says it is arming for "defense." The rival state or group believes the contrary. It becomes at last a question not whether there should be a war, but who should begin it at the advantageous moment. There need hardly be even a show of cause of dispute; there never is inadequate cause for war. The war arises in order that some state or other may not, at some other time, be attacked at a greater disadvantage. All this is as plain as two and two is four. Yet it is prevented from reaching men's minds by the long habit of being armed. Unless they had a preponderating fleet the British would not feel safe. And that, although there might be no rival fleet to threaten them. So with the continental nations and their armies. A disarmed frontier looks to them like suicide. Yet for a hundred years in North America 6,000 miles of frontier between the United States and Canada have been unguarded, and nobody has felt insecure. Why? Just because the frontier was unguarded, so that neither party had to fear an attack. For that reason, mainly, the many acute disputes between the United States and Canada or the United Kingdom have not led to war. Palpably armaments are the cause of war.

Now, in fact, as this war has ended, there is no reason why all states should not disarm by land and sea. The militarist autocracies are smashed to pieces. The liberal democracies, by their own professions, could not contemplate making an aggressive war. There is therefore no one left to make such a war. But a defensive war is impossible if there is no offensive war.

Disarm, and of necessity all disputes are settled by other means than war. Disarm, and the principal difficulty in the way of a league of nations, mutual fear and suspicion, vanishes. Disarm, and permanent peace is guaranteed, so far as anything can be guaranteed in this world.

Why then is disarmament, complete all-round disarmament, not the thing peoples are demanding and statesmen preparing? Simply and solely because of the inertia of bad habit. There are, no doubt, subsidiary reasons—professional militarism and navalism, armament firms, and all the interests that fatten on war, that live on human flesh and blood. But these could not resist a real popular demand for disarmament. The demand is not there, because the knowledge and the thought is not there. Peoples say that they want permanent peace, but they will not sacrifice to it the least of their prejudices nor the thousandth part of their time and trouble. The world will therefore continue armed. And so continuing, will increase a thousand fold the difficulty of preserving peace.

VALUE OF ELECTION RETURNS.

The Supreme Court of Ohio has listened to the election returns. Two years ago the Ohio State Legislature enacted a bill barring insurance companies from selling workmen's compensation insurance. The courts ruled that the law was invalid. The Ohio State Federation of Labor prepared and submitted to the people an amendment to the State constitution empowering the Legislature to enact laws to regulate the insurance of employers' risks under the workmen's compensation law. The amendment carried and the legislature enacted a law forbidding employers to insure with private insurance companies. The insurance companies carried the matter to the Ohio Supreme Court which has sustained the law.

The experience of Ohio shows that exclusive State insurance is cheaper for the employer and more satisfactory for the employee. The premium rates are lower and the amount paid in compensation greater. The State does not employ adjusters to induce the injured workman or the widow of the workman who is killed to accept less than the amount due under the law. The money paid by the private company in salaries to officers, commissions to agents and as dividends to stock-holders goes to the injured workman and to the widow and the orphan.

MAKE IT SAFE FOR ITSELF!

Democracy, which means government by the majority, isn't necessarily right, for the very simple reason that the majority may be wrong. Only an intelligent democracy can be right. The ignorant democracy automatically becomes the victim of the unscrupulous minority. The moral is, to educate the many, and thereby make Democracy safe for itself.

SHIPOWNER MULCTED.

(Continued from Page 7.)

the claimant, contends that the libelant's rights are to be determined by the Canadian law, which does not give a seaman the right to sue in rem for an injury resulting from the unseaworthiness of the ship. It was held in "The Osceola," 189 U. S., 158, that "the vessel and her owner are, both by English and American law, liable to an indemnity for injuries received by seamen in consequence of the unseaworthiness of the ship, or a failure to supply and keep in order the proper appliances appurtenant to the ship." The claimant urges that the libelant should have set up the French or Canadian law whichever he claimed to be applicable. It does not seem to me that this is necessary (The "Titanic," 233 U. S., 718). The injury to the libelant was painful, involved expense and is necessarily permanent; it appears almost certain that his earning capacity will be affected. A decree may be entered for $1500 with costs.

(Signed) EDWIN L. GARVIN,
United States District Judge.

Labor News

Ohio coal miners have won their long fight for legislation that will compel operators to maintain wash houses at the mines.

The International Brotherhood of Paper Makers is conducting a successful organizing campaign in the mills of the northwest.

Service and wound stripes, testifying to overseas duty, do not get the returned negro soldier a job in Chicago, according to Forester S. Washington, of the United States Department of Labor, supervisor of negro economics for Illinois.

The special committee of the Chicago Labor party has perfected plans for holding a delegate convention to arrange co-operation between the Nonpartisan League and the Labor party to be held either in Springfield or Chicago in May.

The New York Cotton Manufacturers' Association has abrogated its rule that any manufacturer who signs a union agreement must withdraw from the association. The bosses now say that these manufacturers can retain membership. The workers' solidarity made it impossible to continue the association if it insisted on ths anti-union policy.

In pursuit of its policy to acquire a great string of daily newspapers throughout the northwest, the Nonpartisan League has launched a stock selling campaign for a daily newspaper to be established in Minnesota. The first check received for the first share of stock sold was signed by Gale Plagmen of Minneapolis, business agent of the Teamsters' Union.

As an aftermath of the general strike in Seattle the newsboys of Tacoma have just won their fight for recognition for their union; for "full returns" which means the return of unsold papers to the publishers without loss to the boys; and the return to their regular street corners of the striking newsboys. The newsies have been on strike since the general strike of last February in a clean, fair battle for the principle of unionism.

The repeal of the property clause in the voting qualifications of Rhode Island was unanimously demanded at the convention of the Rhode Island State Federation of Labor. The resolution calls for every labor organization in the State to protest its retention in the statutes and to demand "the removal of all obstacles to the enjoyment of all the rights of citizenship." Another resolution pledged the delegates not to favor any candidate for the State Legislature who was not in favor of annulling the property clause.

In reply to resolutions by the Merchants Association of New York City, Director General of Railroads Hines says that the railroad administration is firmly convinced that the eight-hour day is the natural right of railroad workers. "The railroad harbor craft in New York," he said, "are nothing more nor less than movable railway bridges. Every railway employe on either shore whose work brought him in contact with the harbor craft was upon an eight-hour day, and his wages had been substantially increased. It was manifestly unfair to withhold from the harbor craft employes of the railroad administration a consideration as to hours of service and wages which had been extended to all other employes of the administration."

Gold Dollars or Stars!

Three men in a dugout.

Z----Z----Z----! Bang----!

One man groaning in agony, asking someone for mercy's sake to kill him—writhing on the ground—legless.

One man crouching against the wall, the upper part of his head blown off, a grotesque jaw the only indication that a man's head had been on that body.

And a third—the writer.

* * *

Who stopped this slaughter?

You at home.

Germany saw that you were heart and soul in the struggle; that you were willing to make any sacrifice for victory; that your tremendous war preparations in men, equipment, munitions, ships and aeroplanes made Victory a certainty.

Now you have the chance of paying for that Victory with your dollars instead of your sons' blood—with gold dollars instead of gold service stars.

The man who passed through this experience will invest. Will you?

Victory Liberty Loan

Prepared by American Association of Advertising Agencies cooperating with the United States Treasury Department

Domestic and Naval

The British steamship "Lancashire Coast," ex-"Annie Hough," ex-"Delta," 1,109 tons gross, 552 net, built at Kinghorn in 1900, S. S. No. 1 in 1917, and owned by the Coast Lines, Ltd., is reported sold for about £35,000.

The Dutch steamer "'Nieu Amsterdam," which left New York March 26 is being detained in Plymouth by the British authorities. No reason is given. It is reported that the former German Minister to Mexico, Von Eckhardt, is on board.

The British submarine "E. 13," interned at Copenhagen, has been sold by the British Government to Mr. Willer Petersen, of Messrs. Petersen and Albeck, Copenhagen, for 150,000 kroner. The submarine is so seriously damaged as to be beyond repair, and is to be broken up.

The San Francisco Board of Supervisors unanimously passed a resolution approving the measure now before the State Legislature to carry over until the next fiscal year a bill to provide $25,000 appropriation for the establishment of a State naval training school at the port of San Francisco. The board in the resolution asked the members of the Legislature to support its stand.

A table annexed to the report of the Superintendent of Insurance, State of New York, shows that for the fiscal year ending June 30, 1918, other-State marine companies paid taxes amounting to $721,471 and foreign marine companies paid $743,-217. Total receipts of the Department were $2,250,651 and expenses $408,648, showing a surplus of $1,842,002. There are 46 purely marine companies transacting business in New York State, of which 5 are local, 3 from other States and 38 foreign (including marine departments of foreign fire companies). The total assets of the marine companies amounted on Dec. 31, 1917, to $80,877,947, total premium income was $64,287,632 and liabilities (including capital) $45,232,072. The insurance in force amounted to $1,336,-411,649.

There have been various rumors as to vessels supposed to have been chartered by San Francisco houses to carry barley to Europe. Investigation proves the rumors well founded and the United States Trading Corporation of 519 California street announces that the new Norwegian motor ships "Semeltind," 2500 tons, and "Kirketind," 2500 tons, now at Seattle, and the American schooner "Falketind," 3500 tons, now in port discharging, will load at once with full cargoes of California barley for Scandinavian countries. F. G. E. Lange, secretary of the United States Trading Corporation, said that a very good demand exists in all of the European countries for barley, and that the greatest difficulty in closing actual business is to provide transportation. Available vessels are scarce and the rates high, but as stocks are exhausted in Europe the merchants are eager to buy even at prevailing high prices. California barley is especially wanted as the reputation established for it before the war created a demand among consumers who recognized the high values contained in the grain, and who are not content to accept the substitutes offered from other parts of the country.

News from Abroad

Establishment of an Austrian soviet republic by May 15 is forecast in advices received from Vienna. The Volkswehr already has gone out to the communists.

The French foreign office is advised that 200 Germans have been arrested in Barcelona and Seville. They are charged with participating in the riots in those cities.

It is reported that the British Government has decided to release all Irish political prisoners. To prevent a great public demonstration the prisoners will return to Ireland in small batches.

A London dispatch to the New York World claims that Herbert Albert Laurens Fisher, Minister of Education, one of Great Britain's most brilliant scholars, will succeed Lord Reading as British Ambassador at Washington.

Famine and unemployment at Odessa and throughout the Russian Black Sea regions are expediting the advance of the bolshevik armies southward, consular advices report. Industries are at a standstill, according to the advices, and food prices are advancing daily.

The Bolsheviki completely devastated the town of Ossa before its capture by Admiral Kolchac's forces, according to official dispatches from Omsk. All the educated classes in Ossa, the messages declare, were murdered, the total number of persons shot reaching 2000. Few of the men who were in the place are left, as nearly all the surviving workmen were carried off when the Bolsheviki evacuated the town.

The president of the Sydney Chamber of Commerce has delivered a speech, warning bankers and business men of the United States against over-exploitation of Australian trade. He asserted that a big American banking and commercial combine had laid plans backed by huge capital. He declared that if their plans were allowed to operate Australian industry would dwindle and unemployment become rife.

At a banquet given by Roberto Pesqueira, Governor of the State of Coahuila, in honor of American newspaper men, the Governor, who said he was speaking with the authorization of Luis Cabrerra, who will resume the Secretaryship of the Interior in a few days, said that the Government would enact a new oil law recognizing the ownership of the subsoil of all properties bought before the new Constitution.

In Paris, during the past month, nine barracks were thrown open for the sale of foodstuffs direct from the Government to the customer. It was estimated that when the stores closed at 5 o'clock 25,000 had been waited upon, and not less than 50,000 pounds of foodstuffs sold. Prices are half those charged in ordinary shops. The barracks, named the "Vilgrain Barracks," are in the most congested, populous and poorest quarters of the city.

Increasing agitation among the South African natives, growing out of the recent troubles in white labor circles, is reported by Reuter's Johannesburg correspondent. There is a movement on foot among the natives against the law requiring them to possess registration passes, and the authorities are rounding up the ringleaders. The movement is condemned by a number of the responsible and influential native chiefs, the correspondent states.

With the Wits

Fortune Teller—I see a loss of money.

Customer—Me, too. I have paid you in advance.—Boston Tsranscript.

"What is this terrific combat?" "A bargain struggle for marked-down millinery." "I get you. Fighting at the drop of a hat."—Kansas City Journal.

Hub—What did you do with all those unpaid bills, Alice?

Wife—I saw they were beginning to worry you, dear, so I destroyed them.—Houston Post.

Carter—Aren't you drinking a little more than usual?

Clubleigh—Yes; my wife has a cold in her head and can't smell a blame thing.—Kansas City Star.

"Miss Pacer is a very bright woman, judging by my interview with her." "What did she say?" "Nothing much, but she approved of what I said."—Cleveland Plain Dealer.

"What do you mean by an academic question?" "One in which there is no profit for anybody," said the Old Codger, "no matter which way it is decided."—Louisville Courier-Journal.

Caller—This poem was written by a lawyer. Has it any value?

Editor (glancing through it)—About as much value as a legal opinion written by a poet.—Cincinnati Times-Star.

Madge—I thought your engagement to him was merely for the duration of the war.

Marjorie—Pshaw! It will go on indefinitely. We've agreed to extend it for the duration of the Peace Conference.—Life.

Conscientious Objector—Shooting at those targets makes me realize how awful war will be. I'd die before I'd kill a man!

Officer (who has watched him shoot)—You certainly would.—New York Evening Sun.

"And you call yourself a lover of peace!" said Mr. Rafferty. "I do," answered Mr. Dolan. "After intentionally droppin' the brick on Casey?" "Yes. I've never known Casey to be so peaceful as he was just after I dropped that brick."—Washington Post.

Polite Shopman (showing goods)—Here is something I would like to call your attention to, madam. It's the very latest thing out.

Mrs. Rounder (absently)—If there's anything out later than my husband I'll take it, if only for a curiosity.—London Punch.

An Invitation

We invite deposits from every one—rich, poor, old and young. We recognize no classes, but treat large and small depositors with the same courtesy and consideration.

HUMBOLDT SAVINGS BANK

733 MARKET STREET, Near Fourth
SAN FRANCISCO

Taylor's Nautical Academy

Established 1888

Consular Building, Corner Washington and Battery Streets, Opposite New Custom House, San Francisco, Cal.

THIS OLD AND NOTEWORTHY SCHOOL is under the direct and personal supervision of CAPTAIN HENRY TAYLOR and equipped with all modern appliances to illustrate and teach any branch of Navigation.

The class of teachers of Navigation in the past have been those having simply a knowledge of Navigation, and Navigation only. Conditions have changed, and the American seamen demand a man as a teacher with higher attainments than one who has only the limited ability of a seaman. The Principal of this School, keeping this always in view, studied several years the Maritime Law, and is now, in addition to being a thorough teacher of Navigation and its kindred subjects, a regularly admitted Member of the Bar.

There is no standard of education required of a pupil entering the School, for no matter how ignorant the seaman may be, even in the rudiments of common education, Captain Henry Taylor will teach and raise him from the depths of ignorance to the height of the average well-informed man, and in a comparatively short interval of time.

THE SEAMEN'S JOURNAL

FOR THE SEAFARING PEOPLE OF THE WORLD.
Official Paper of the International Seamen's Union of America.

A Journal of Seamen, by Seamen, for Seamen. Our Aim: The Brotherhood of the Sea. Our Motto: Justice by Organization.

VOL. XXXII, No. 33. SAN FRANCISCO, WEDNESDAY, APRIL 23, 1919. Whole No. 2535.

SEAMAN'S CLAIM ARBITRATED

Shipping Commissioner Decides in Favor of Seaman Unlawfully Discharged

When may a seaman, against his will, be lawfully discharged in a port other than the one specified on the ship's articles as the "final port of discharge"? is a question of interest alike to shipowners, masters and seamen.

The number of instances where seamen are unlawfully, and against their will, discharged in foreign ports, or in domestic ports far from their homes, probably runs into the hundreds every year. As a rule none of the parties involved in such cases —consuls, port authorities, shipmasters, seamen, etc.—have any clear conception, much less knowledge, of the law governing the subject. The seaman, being economically the weakest, and the party indicted to boot, invariably gets the worst of the deal. In fact, such discharges, more often than not, work hardships upon the seamen affected that, if suffered by landsmen, would entitle them to heavy financial compensation from the employer. Yet it is safe to say that not one seaman in twenty who is unlawfully discharged gets even the full amount of wages due him at the time, let alone any compensation.

For the reasons indicated, and others, an authoritative opinion on the subject of unlawful discharge of seamen is always welcome. The Journal is much pleased, therefore, to be able to lay before its readers an opinion of that kind, handed down in a case recently arbitrated by Mr. Theodore H. Price, first assistant to the United States Shipping Commissioner for the Port of New York, while acting for the latter.

The opinion in question is of much importance to seamen, as also to masters and shipowners; and should be carefully read by all parties concerned, with a view to future guidance in similar cases. To lawyers handling seamen's cases the opinion will be found especially valuable because of its resting upon long accepted court decisions, duly cited and applied. It is illuminating in other ways, too, and well worth perusal by anyone interested in seamen and their affairs.

Mr. Price's decision in full follows:

Office of the U. S. Shipping Commissioner, New York, N. Y.

Arbitration before U. S. Shipping Commissioner, New York, under Section 4554, U. S. Revised Statutes.

M. Constantine, Claimant, vs. Mallory Steamship Company, S. S. "Concho," Respondent.

Silas B. Axtell, Counsel for claimant.

The complainant makes claim for the following amount plus waiting time:

Money due at time of discharge	$18.30
Living expenses in Key West for three days, from August 30, to September 2, 1918, at $3 per day	9.00
Transportation to New York	89.60
Wages from August 30 to September 1, two days at $1.83 a day	3.66
	$120.56

Waiting time from September 1st, to the time of actual payment at the rate of $3.66 per day. Such compensation up to March 13, 1919, the date of memorandum on behalf of claimant, would amount to $596.58.

M. Constantine, the claimant, shipped as waiter on August 20, 1918, under wages at the rate of $55.00 per month, on the S. S. "Concho" for a voyage from New York to Galveston, Texas, and such other ports and places coastwise as the master might direct, and back to New York, a final port of discharge in the United States, for a term of time not exceeding three calendar months. The voyage commenced on August 21st, and terminated at New York, on September 13th, and the crew were paid off through this office. The official log book of the S. S. "Concho," filed with this office, on the said date, contains the following entries with reference to the said Constantine:

"9 a. m., August 27, '18—At sea, latitude 31° 55′ N., longitude 79° 30′ W. M. Constantine, waiter, refused duty when ordered to scrub deck in saloon. Fined two days' pay, $3.65. F. G. Avery, master. John Macfie, Steward."

"9 a. m., August 28, '18—At sea, latitude 29° 10′ N., longitude 89° 25′ W. M. Constantine, waiter, for continued wilful disobedience to lawful orders. Fined four days' pay, $7.25. F. G. Avery, Master. John Macfie, Steward."

"9:30 a. m., August 28, '18—Latitude 29° 10′ N., longitude 80° 25′ W. The entries regarding disobedience to lawful orders have been duly read over to each man—Grant Plair, waiter, and M. Constantine, waiter. They absolutely refuse to obey the order. F. G. Avery, Master. John Macfie, Steward."

"10 a. m., August 30, '18—Key West. The Deputy Shipping Commissioner having read over the entries against G. Plair and M. Constantine waiters. They both elected to leave the ship.

"Vouchers for the balance of wages due were handed to Commissioner:

C. Plair, 9 days at $55.00	$16.50
Less fines	11.00
Balance due	$5.50
M. Constantine, 8 days	$14.65
Fines	11.00
Balance due	$3.65

"F. G. Avery, Master. John Macfie, Steward."

The testimony shows that about three or four days after leaving New York, the right knee of the claimant became swollen; that the claimant reported that fact to the chief steward, in the presence and hearing of a witness, requesting some liniment or iodine to relieve it. The chief steward replied to the claimant that he had no liniment, and that he did not have time to bother with him. The following day, August 27th, in the morning, the claimant was ordered by the chief steward to scrub the floor of the dining-room with a scrubbing brush. The claimant informed the chief steward that on account of his swollen knee, he was unable to work on his knees and expressed a willingness to mop the floor with a long-handled mop, which could have been done in a standing position. He was not permitted by the chief steward to do the work in this manner, and upon his still declining to perform the work on his hands and knees, the chief steward ordered the claimant before the master of the ship. The master told him to do the work as ordered by the chief steward and that he was logged two days for disobedience. The following day, August 28th, the claimant was again ordered by the chief steward to scrub the dining-room floor. The claimant again refused for the same reason as on the day before, and he was again told by the chief steward to report to the captain. He was told, on this occasion, that he was logged four days' pay for disobedience of orders. On both occasions the claimant informed the master that his reason for refusing to scrub the floor in the manner directed was on account of his swollen right knee. Upon the arrival of the vessel at Key West on August 30th, the said Constantine was discharged by the master in the presence of, and with the approval of, an official from the office of the Collector of Customs, on account of disobedience of orders. The said Constantine was tendered by the master, in settlement of wages, the sum of $3.65, being eight days' pay, less the fines of $11.00 imposed by the master for disobedience on August 27th and August 28th. The amount was declined by the claimant and he was thereupon ordered ashore by the master.

He gathered up his belongings and went ashore, as ordered. Being without funds, he telegraphed to his sister in New York, and upon receipt by telegraph from her, two days later, of the sum of $100.00, he purchased a railroad ticket and returned to New York.

The first question to be considered is grounds for his discharge. I think the principle is well established by the Courts that the right of the master to discharge a seaman before the end of the voyage is dependent on whether his conduct was a serious breach of the ship's discipline, and conduct of this character has not been shown by the testimony in this case. If the refusal of Constantine to obey orders given

[illegible] been without good reason, which was not the case, such refusal would not have been sufficient grounds to justify the master in terminating his contract. The Statutes provide penalties for disobedience of lawful commands; the master imposed the penalty as provided by law, and further sought to punish him by leaving him at an outside port practically penniless, to make his way home to New York as best he could. Under the circumstances, as shown by the testimony, the fines in my opinion are unjust. Neither the chief steward nor the master appear to have paid any attention to his application for medicine, and took no steps to examine him and investigate his contention that his refusal was based on his inability to scrub the saloon floor due to a swollen knee. The causes for which a seaman may be discharged are ordinarily such as amount to disqualification, and showing him to be an unsafe or an unfit man to have on board the vessel. (Smith vs. Treat, 2 Ware, 266). (See Villa Y. Herman, 101 Fed. Rep., 132.) Seamen may be discharged for aggravated offenses, or for such gross and persistent misconduct as show them to be disqualified to perform the obligations of their contract. (Nieto vs. Clark, 18 Fed. Cas., 230.) Ordinarily the law will not justify the master in dismissing seamen for a single offense unless it be of a very high and aggravated character. (Cornelia Ansden, 6 Fed. Cas., 562.) In the case of Boston vs. the Ocean Steamship Company of Savannah, 83 N. E., 1116, 187 Mass., 561 (1908), it was held that a seaman who has shipped for a voyage from port to port and return, who is discharged by the master unjustifiably at the outward port before the voyage is ended, can recover from the owner of the vessel as damages for his wrongful discharge, not only compensation for his loss of time, but also his necessary expenses incurred in returning to the port of shipment. (See also The White Seal, 194 F., 402, 114 C. C. A., 364; The Emma F. Angel, 217 F. 311, Alaska Steamship Company vs. Gilbert, 236 F., 715, 150 C. C. A., 47.)

U. S. Revised Statutes, Sec. 4529, as amended March 4th, 1915, provides as follows:

"The master or owner of any vessel making coasting voyages shall pay to every seaman his wages within two days after the termination of the agreement under which he was shipped, or at the time such seaman is discharged, whichever first happens: in case of vessels making foreign voyages, or from a port on the Atlantic to a port on the Pacific or vice versa, within twenty-four hours after the cargo has been discharged, whichever first happens; and in all cases the seaman shall be entitled to be paid at the time of his discharge on account of wages a sum equal to one-third part of the balance due him. Every master or owner who refuses or neglects to make payment in the manner hereinbefore mentioned without sufficient cause, shall pay to the seaman a sum equal to two days' pay for each and every day during which payment is delayed beyond the respective periods, which sum shall be recoverable as wages in any claim made before the court; but this section shall not apply to master or owners of any vessel the seamen of which are entitled to share in the profits of the cruise or voyage. (This section shall not apply to fishing or whaling vessels or yachts Dec. 21, 1898, sec. 26—but this section shall apply to all vessels engaged in the taking of oysters—June 28, 1906, sec. 4.)"

The facts in this case show that wages were tendered upon discharge; not the full amount earned, however, but the balance due after deductions of fines imposed by the master, which amount was refused by the claimant. It would seem, therefore, that there are fair grounds for controversy as to the amount due, which in the light of the authorities I have read, would exempt the ship from the penalty imposed by the Statutes. A case in point is Alice B. Phillips, 106 D., 956 (1901). On the discharge of a seaman, a dispute having arisen as to the amount due him, the master went with him before a shipping commissioner, who decided in favor of the contention of the master. Held that such decision, although erroneous, constituted a reasonably "sufficient cause" for withholding the additional wages claimed to exempt the ship and owners from the penalty imposed by R. S. Sec. 4529, as amended by Act Dec. 21, 1898 (30 Stat., 756), for a failure to pay promptly on discharge.

Reference is also made to the following cases: The Sarah C. Sumner, 142 F., 811 (1905); The Express (D. C., 129 F., 655 (1904); Gen. McPherson, 106 F., 800 (1901); The Geo. W. Wells, 110 F., 761 (1902); The Amazon, 144 F., 153. The opinion of Judge Irvin, in the case of the Columbia, 252 F., 658 (1914), in which he discusses the words "without sufficient cause," is of interest in this connection.

It is my opinion that the discharge of Constantine at Key West was without sufficient cause, and that, under the law, he is entitled to, and I hereby award him the following:

Wages from date of shipment to end of voyage, to wit: August 20th to September 13th, 1918, 25 days at $55.00 per mo.	$ 45.83
$3.00 a day for 5 days' living expenses while in Key West and en route to New York	15.00
Cost of transportation to New York by rail	61.98
	$122.81

The claim for waiting time under R. S. 4529 is not allowed.

(Signed) PATRICK H. QUINN,
U. S. Shipping Commissioner,
New York, N. Y.

March 28th, 1919.

NONPARTISAN LEAGUE DOCTRINES

Surveying the economic program of the Nonpartisan League as a whole, we may properly call it radical; if we like to mix description and denunciation we can stigmatize it as "socialistic." Nevertheless, it is not Socialism. Whether it is too radical for social safety, whether it would put upon the State a burden of industrial control and management that is unsound and unwise, are questions about which men may honestly differ. Those who do not believe in the demands and proposals of the new organization need not be very fearful; for by the time that its members have removed the constitutional obstacles that confront them, they will probably be in a mood to proceed slowly and to test carefully each gradual step in their radical program. No body of American farmers, the majority of whom are farm owners, is going to make a revolution. On the other hand, the doctrines and the history of the Nonpartisan League are a very important "sign of the times." That the most conservative class in our society should have produced an organization and a program of this sort, is a phenomenon that is well worth serious and fair consideration.—The Catholic Charities Review.

PUBLIC VS. PRIVATE CONTROL.

A writer familiar with the telegraph service in this and other countries, under both private and public ownership, has pointed out in a recent issue of Pearson's Magazine a most striking illustration of the advantages of public ownership. He says:

"The United States enjoys the unenviable distinction of paying twice the rates of any European nation and of sending hardly any more telegrams than England, although it is twice as populous.

"The minimum cost of a telegram in the various civilized nations is as follows: Great Britain, 12 cents; France, 10 cents; Germany, 12 cents; Belgium, 10 cents; Switzerland, 12 cents; Austria, 11 cents; United States, 25 cents.

"That the number of telegrams sent is inversely proportional to this minimum cost is shown in these figures. The number of telegrams used for every 100 inhabitants: Great Britain, 84; Switzerland, 127; France, 108; United States, 95."

Skunks become quite contented when domesticated and the objectionable odor that has made this animal offensive, yet which saves it from its many enemies, is rarely encountered on a fur farm. The odor is noticeable only when the skunk is put on the defensive, and on fur farms it is easy to avoid arousing its anger and excitement to the point where it is obliged to use its only means of defense for its own protection. Skunks are as playful as kittens, and always better natured.

AUSTRALIA'S POPULATION.

Before the end of 1918, Mr. G. H. Knibb the Australian commonwealth statisticia was able to announce that in Septemb the population of the commonwealth, e clusive of full-blooded aborigines, ha passed the 5,000,000 mark. This poi would have been reached four years befo if it had not been for the departure troops and the cessation of immigratio The effect of the war was shown i 1915-16, when for the first time since 17 the population figures for the whole Australia showed a decline. With the r sumption of normal conditions and th return of Australia's troops, it is probabl that the next census, about the end March, 1921, will see a total of 5,400,00 On December 31, 1800, the population, e clusive of aborigines, was 5217. In 185 seventy years after the first settlement, th million mark was reached. The secon million came in 1877, the third in 1889, th fourth in 1905, and the fifth in 1918. Sinc the attainment of the first million, Australi has averaged a million ever fifteen years.

The ordinary coffee plant is a native o Abyssinia, and as such was used as a bev erage, both in the wild and cultivated state from time immemorial. It was carried int Arabia about the beginning of the fifteenth century. From Arabia it was carried to al parts of the Mohammedan world by th Mecca pilgrims, who found in it a happy substitute for the alcoholic beverages forbid den by the Koran. The first authentic men tion of it by a European was by a Germar physician and traveler, on his return from a tour through Syria in 1573. It was brought to Venice by a physician in 1591. It was referred to in 1621 by Burton in his "Anatomy of Melancholy" as follows: "The Turks have a drink called coffee, so named from a berry black as soot and as bitter which they sip hot because they find by experience that that kind of drink so used, helpeth digestion and promoteth alacrity." The first coffee house established in London was in 1652. Coffee was heard of in France in 1658, and became fashionable in Paris in 1669.

The Chinese themselves, according to a Canton paper, recognize the extreme complexity of their written language. About twenty years ago, in the days of the Empress Dowager, a scholar and reformer named Wang Chao, who held the highest obtainable literary degree, conceived the idea of a simplified form of Chinese writing. He invented a phonetic system of symbols, which was promptly branded revolutionary and suppressed, while its "radical" author was banished. Lately, however, the idea has been reintroduced, and the Government has tried a system of the same kind, but more complicated, without much success. Two missionaries of Tsangchow have fared better in an effort to revive Wang Chao's phonetic script, which is based on the fact that, although the number of characters is vast, there are only 318 "word sounds" in the Chinese language.

"Every workman in his trade union; every employer in his trade association," is the ideal of trade organization announced by Dr. Addison, British minister of reconstruction.

WEEKLY NEWS LETTER

Contributed by American Federation of Labor

Crowded Off First Page.

Organized employees of the Post Office Department are crowded off the first page of newspapers with their quarrel with Postmaster General Burleson because of the Postal Telegraph company's quarrel with the postal chief.

Mr. Burleson recently deposed Clarence H. Mackay, president of the Postal, and several other officials because, he said, they "refused to obey orders." Then Mr. Burleson said wage increases compelled him to raise telegraph rates 20 per cent. Now the organized commercial telegraphers say, "search us for wage increases." Then Mr. Mackay took the center of the stage and averred that Mr. Burleson is in cahoots with the Western Union and he flings a mass of figures at the postal chief to prove his point. Mr. Mackay says "it is absolutely unnecessary" to raise telegraph rates except that "Mr. Burleson has agreed to pay the Western Union more than he should have agreed to and in order to realize that amount he has to raise the rates."

"If Mr. Burleson will return our lines to us at once," continues the Postal man, "we will carry on the telegraph business at the old rates." Mr. Mackay also says that the Western Union is not administered carefully and economically.

But Western Union is saying nothing. It is too busy raking in the shekels and victimizing members of the Commercial Telegraphers' Union.

Acquit Motorman.

Edward Lewis, in charge of the Brooklyn Rapid Transit company's wrecked train that killed 98 passengers last November, has been acquitted of manslaughter charges by a jury in the Nassau county supreme court.

The company refused to accept a decision by the National War Labor Board that a score of trade unionists be reinstated. It was found that the unionists had been victimized. A strike followed and Lewis, who had no experience as a motorman, was placed in charge of the train.

The division superintendent, who ordered Lewis to take charge of the train, was recently acquitted.

Favor Six-Hour Day.

A six-hour work day and a five-day week, wage increases, nationalization of coal mines and the right to organize and bargain collectively with the Government were the principal declarations at the last meeting of the policy committee of the United Mine Workers, which was attended by 175 representatives of that organization.

These recommendations, it was stated, were intended to be a notice to the Government and the operators that the coal miners will demand wage increases, instead of reductions, and that they will endeavor to enforce a shorter work day. It was also stated that British miners are now attempting to establish the six-hour day and increase wages, and that Premier Lloyd George has declared that this would place British coal operators in an unfair position to compete with American mines, now operated on an eight-hour basis.

Members of the policy committee stated that if the declarations are made effective they would not only benefit American miners, but British miners as well, because the objections raised by the British Government would be removed.

Can't Bust Trusts.

Twenty years ago the American Federation of Labor declared, in annual convention, that "we are convinced that the State is not capable of preventing the development or the natural concentration of monopoly."

Now the business men of the country, through the Chamber of Commerce of the United States, have practically accepted this position and by a referendum vote have declared that "Congress should be asked immediately to consider the present situation of all statutes constituting our anti-trust legislation."

The Chamber of Commerce submitted that question to its affiliates and the result is: For anti-trust law changes, 1,543 organizations; against, 51 organizations.

Living Costs Go Up.

The Bureau of Labor Statistics reports that food prices in the United States on December 15, 1918, were 2 per cent. higher than on November 15, 1918.

Comparing December, 1918, with December, 1917, the combined increase of all articles was 19 per cent.

During the five-year period, December, 1913, to December, 1918, food prices advanced 79 per cent. Seven of the 17 articles increased 100 per cent. or over; sugar, 100 per cent.; ham, 101 per cent.; pork chops, 104 per cent.; corn meal, 106 per cent.; flour, 109 per cent.; lard, 116 per cent., and bacon, 119 per cent. The remaining 10 articles all show an increase of 60 per cent. or over.

Want Children Guarded.

At a meeting of the Minnesota State child labor committee it was declared that "patriotism and loyal sacrifice have been made the plea for exploitation of children in gainful occupations during the past year, even in Minnesota, where child labor laws were upheld under the strain of war conditions more strongly than was the case in most States. Now is the time for a general campaign of awakening of public interest against further letting down of the bars and for a rapid rebuilding of child welfare safeguards."

Liberty Loan Facts.

Secretary of the Treasury Glass announces the dates upon which payments will be required on the notes of the victory liberty loan as follows:

Ten per cent. with application on or before May 10; 10 per cent. on or before July 15; 20 per cent. on or before August 12; 20 per cent. on or before September 9; 20 per cent. on or before October 7; 20 per

World's Workers

A movement for the establishment of a forty-hour week in all industries in Australia has been started by the Melbourne Trades Hall Council.

Establishment of a minimum wage and provision of equal pay for men and women on farm work are among the recommendations of the General Union of Workmen of Spain recently adopted.

Even the farmers are on strike in Argentina. They are refusing to plant crops this year because they receive only 1 peso 41 centavos (60 cents) for 100 kilograms (220 lbs.) of corn. They refuse to plant again unless they are assured 3 pesos 50 centavos ($1.49) was their ultimatum to the Minister of Agriculture.

No little consternation has been caused in Chinese government circles by the report from Petrograd that a Chinese labor organization, 60,000 members strong, has been formed for the purpose of carrying the propaganda of revolution into China and organizing Soviets throughout the country. The government has adopted the expedient which other capitalistic governments are helplessly embracing as Bolshevism invades their territory—it has appointed an investigating committee to see what can be done about it!

Unemployment in Lancashire and Cheshire during the closing days of March stood as follows: total number of persons receiving the government unemployment donation, 223,714; men, 83,786; women, 125,063; boys, 5773; girls, 9092. In the first week of January there were 17,000 persons in Manchester area receiving the donation benefit. Nearly 10,000 of these were women and 2000 were discharged soldiers. Since then the number of women has more than doubled, while that of discharged soldiers has trebled.

How menacing to the established order is the amazing spread of socialism, appears from the fact that the Dutch Roman Catholic bishops have issued a joint pastoral enjoining all Catholics not to become members of a socialistic organization, or to give active support to it, or to read socialist publications, or to accept the teachings of socialists. The letter states that those who are socialists or support socialist doctrine must renounce their membership in the church, and those who continue to read socialistic publications must be restrained from receiving any sacrament.

Unemployment in Denmark during the year of 1918 was bad enough, but since the beginning of this year has steadily increased to such alarming proportions as to overshadow all other questions and problems. The maximum of unemployed during difficult periods before this was 50,000. Now the number has gone beyond 63,000, and the end is not yet. The government is frantically trying to meet the situation. Laws have been passed for subsidizing labor union benefit funds, for establishing governmental employment bureaus, for loaning money to various communities to enable them to undertake public works, etc. Conferences have been summoned at the ministry of the interior between representatives of the trades unions and the employers' associations in the hope of relieving the situation. No one will venture to predict what it will all lead to.

Pacific Coast Marine.

Tacoma's shipping report for March, compiled by Harbormaster W. G. Rowland, shows that there were 94 deep-sea vessels, aggregating 118,254 tons, arrived, and 97 departed, with a tonnage of 129,852 tons.

The Emergency Fleet Corporation has guaranteed the continuance of the Macy wage scale in the Pacific Coast shipyards until October 1, in order to stabilize industrial conditions during the reconstruction.

The Northern Commercial Company, through Agent John L. Burnside, announced the purchase recently of the motor ship "Ozmo," formerly the "Hugh Hogan," for operation between Seattle and Bethel, on the Kuskokwim River.

One of the smallest libel suits ever filed in the Federal Court at Tacoma was placed, when the local steamer "Vashon" was libeled for $25 by the owners of the launch "Vaughn." It is alleged the "Vashon" bumped the "Vaughn" and five sacks of wheat went overboard.

The five-masted schooner "George E. Billings" sustained considerable damage to her bowsprit and lost her anchor, according to a survey, following a collision in San Francisco Bay when the steamer "Point Adams" and the barge "Santa Paula" crashed into the schooner. The anchor later was salvaged by a Haviside, Withers & Davis derrick barge.

Lyng & Rix of Portland have interested business men in the construction of a four-masted topmast schooner, which is to be laid down at the Columbia City plant of the International Shipbuilding Company, at the head of which is George M. McBride. It is estimated the vessel will cost $175,000 and will have a lumber capacity of 1,250,000 feet. She will be 190 feet long, 40 feet beam and 19 feet deep.

The "Korea Maru" of the Toyo Kisen Kaisha line will not leave San Francisco until May 20, instead of on May 16, owing to a change of schedule caused by the unexpected delay of the steamer in Japanese ports, it was announced by the company following cable advice. Another change in the schedule of the company is the arrival of the "Persia Maru," which is now expected about May 8, instead of April 30.

Work is still going on at the scene of the wreck of the steamer "Bear," the crew being engaged now in getting the vessel's plates ashore. Besides the boilers of the steamer, which now are in China, a large quantity of salvage has been sent to San Francisco, including parts of the main engines. The remainder of the engines is now on the beach and will be shipped below as soon as the roads are in condition to haul material to the railroad at Fernbridge.

The Key Route ferryboat "San Jose," destroyed by flames at the Oakland mole, is to be sold for junk or for whatever other purpose the highest bidder may see fit to make of her, it was announced by Captain P. Rasmussen, marine superintendent of the company. The "San Jose" is now listing with the tides in the mud flats between the Key Route and the Southern Pacific moles. While the bay is short of ferry boats it was not considered feasible to rebuild her. The sale will be held May 18.

In his bid of $11,100, which was the highest submitted, J. H. Price, head of the J. H. Price Shipbuilding Company of Seattle, became the owner of the British auxiliary schooner "Janet Carruthers," ashore on the beach near Oyehut, a few miles above the Grays Harbor entrance. Mr. Price also purchased the vessel's cargo of 40,000 feet of lumber, but the amount of his bid on it was not made public. It is stated the vessel will be dismantled and an effort made to float the hull on high tide later in the season.

A ship canal leading from the Columbia River at Ilwaco to Wallapa harbor is an improvement which will be authorized by Congress in the immediate future. This project will be the first link in a chain of waterways, suitable for light draft craft, that will connect all the harbors from the Columbia River to Puget Sound, commencing at Ilwaco and ending near Olympia. Waterways of this kind are being constructed on the Atlantic Coast right now and are proving of immeasurable benefit to commerce, affording a means of cheaper transportation than can be provided by rail.

John K. Bulger, Supervising Inspector of Steamboats for the First District of California, ordered that the licenses of John A. Babcock, James McGuire and John Floud, first, second and third engineers of the steamer "Annette E. Rolph," be restored to them. The men deserted the steamer in Honolulu on December 12, 1918. Their licenses were revoked by the inspector at Honolulu and wages canceled by the shipping company. Bulger said that the investigation had disclosed cause for complaint on the part of the men, and he felt that the men had been sufficiently punished by loss of their wages.

A marine railway capable of handling ships up to 6000 tons deadweight will be built on the Youngs Bay property of the Astoria Marine Iron Works by the United States Shipping Board and the marine plant. The new marine railway is to be built at a cost of about $500,000 and was authorized by the Shipping Board some time ago. The company has acquired 500 acres of land on Youngs Bay with a water front of 12,000 feet, upon which will be erected a mammoth steel and iron working plant, and it will be a leading factor in the development of commerce in the lower Columbia.

Fifteen carriers of the United States Shipping Board which have been assigned to the overseas trade will go into commission at Seattle and Portland in the next six weeks, requiring nearly 1000 officers, sailors, firemen, coal-passers, cooks and messmen according to records compiled by the Sea Service Bureau of the Shipping Board in Seattle. The fleet, which must be manned in record-breaking time if the vessels are not to be delayed in getting to sea, is composed of the steamships "West Hembric," "West Helix," "Jacona," "Western Knight," "Edgebill," "Edgemont," "Cascade," "Quittacas," "Remus," "West Maximus," "West Tacook," "West Hemattite," "West Colina," "Eldena" and "Ozetta."

Plans have been completed for a drydock at St. Helens which would provide for a deadweight lifting capacity of 5000 tons and the citizens of St. Helens have sought the assistance of the Charles R. McCormick Steamship Company in fostering the project. A portion of the estimated cost of $200,000 has already been subscribed. The dock will if built be 320 feet long and 90 feet wide, with an apron on each end of the dock of 30 feet, so that its extreme length would be 380 feet. It is proposed to install a steam pumping plant to lift the dock from the lowest point of submersion in two hours, and it will be located alongside the property of the St. Helens Steamship Company, where the water is 60 feet in depth.

Alleging that the Indian names bestowed upon the Government ships is resulting in a great deal of trouble and difficulty for the managers, operators and all concerned, firms and individuals associated with the world of shipping are flooding the United States Shipping Board with protests against the retention of the peculiar names, and request is made that common ones be substituted. The letters say that although there may be some historical merit in the Indian names, as chosen by Mrs. Wilson, the merit ceases when the importer, exporter or other person concerned tries to decipher a code which is attempting to make clear names such as the following: "Quistconk," "Wahkiakum," "Wakulla," "West Gotumska," "Chiquimba," "Zumbrtoa," "Sagadahoc," "Ozarkee," "Lohocla," "Hauppauge," "Absarokt," "Battahatchee."

Joseph Barker, port engineer for the Matson Company, is busily engaged in preparing a fleet of some fifteen wooden steamers for their long voyage to Atlantic ports. These vessels will have to be recaulked in places and otherwise made as seaworthy as possible. The engines also will be overhauled. The fleet has operated for the Matson line between San Francisco and the islands of Hawaii during the period when sugar was scarce here and it was difficult to secure vessels to do the carrying. The route between Hawaii and the Atlantic via the Panama Canal makes it possible to send the wooden fleet into other work. Thirty-five will be used by Charles R. McCormick to carry railway ties to the Atlantic. An effort will be made by the Shipping Board to send the fleet back here with other cargo which will permit them to be retained in the tie service for some time.

Assistant Supervisor J. W. Hall of the Government's wood shipbuilding work in Oregon has announced that two of the ships under construction at the Peninsula yard will be converted into six-masted sailers, and two others will be made into motorships. Other partially completed vessels on the ways in this district will be launched as hulls, it is stated. The Peninsula yard ships are of the plant's own design of a deadweight tonnage of 4000 to 4500. It was the original intention to convert all of the four vessels into sailers. The conversion, according to Hall, will enable the ships to make a fair rate of speed. They have a length of 286 feet and there is plenty of beam and depths to make them seaworthy as cargo carriers, principally lumber. Success in building the motorship has caused the Government to adapt two of the hulls to this motive power. Plans have been received and the work of transformation will begin at once.

F. R. WALL, who was for many years an officer in the United States Navy, is now practicing marine law in San Francisco. He gives claims of all seafarers careful attention. 324 Merchants Exchange Bldg., 3rd Floor, California St., nr. Montgomery. Phone, Sutter 5807 (Adv.)

Advertising Rates on Application.
Business and Editorial Office, Maritime Hall Building, 59 Clay Street, San Francisco. Telephone Kearny 2228.

Changes in advertisements must be in by Saturday noon of each week.

To insure a prompt reply, correspondents should address all communications of a business nature to the Business Manager.

Entered at the San Francisco Postoffice as second-class matter. Acceptance for mailing at special rate of postage provided for in Section 1103, Act of October 3, 1917, authorized September 7, 1918.

NOTICE TO CORRESPONDENTS.

Communications from seafaring readers will be published in the JOURNAL, provided they are of general interest, brief, legible, written on one side only of the paper, and accompanied by the writer's name and address. The JOURNAL is not responsible for the expressions of correspondents, nor for the return of manuscript.

WEDNESDAY, APRIL 23, 1919.

SCHOOLSHIP FOR SAN FRANCISCO.

A training ship for young boys, stationed at San Francisco, has long been a cherished objective of the port's forward-looking citizens. San Francisco, "the gateway of the Pacific," they say, is a fast growing world mart. Its geographical position and splendid natural harbor will, in the course of the years, inevitably tend to make it the central emporium of this continent for the great future trade with the Orient and Australasia. Their imagination pictures San Francisco Bay dotted, and the docks of the port lined, with ships flying the flags of every maritime nation; twentieth-century argosies bringing hither the wealth of the Indies and far Cathay, and the South Sea Isles.

But thoughts of ships naturally lead to thoughts of their complements, seamen. And seamen, to become efficient, need lots of training, especially when they are young. Which brings us back to the schoolship question.

In 1917 the California Legislature appropriated $25,000 for the purpose of providing a training ship for the State, with the proviso, however, that the vessel must be obtained on or before June 30, 1919, or the appropriation would automatically lapse on that date.

Came then the war with Germany, sidetracking everything not directly related to the one great issue of stemming the rising tide of German militarism. The training ship project, like many others, was allowed to lag. What with the stress and strain of wartime activities, and trying to keep up with the ever mounting cost of living, people were too busy to bother with much else.

But lately there has been a decided disposition shown in several quarters to revive the project. On the 7th inst., for instance, a joint resolution was introduced in the Legislature requesting Secretary Daniels, of the Navy, to assign Admiral Farragut's old flagship, the "Hartford" or other available vessel, to San Francisco for use as a training ship for boys. A measure was also introduced providing for the carrying over until the end of the next fiscal year the aforementioned appropriation of $25,000. The San Francisco Board of Supervisors went on record in a resolution unanimously adopted as approving the Legislature's action, and pledging their united support of the project. The Chamber of Commerce and other civic bodies fell in line with cheerful endorsements. Prominent men, both in San Francisco and the State at large, got in touch with the Navy Department and the U. S. Shipping Board in an endeavor to enlist their aid in furthering the design.

On top of all this the State Superintendent of Schools is "ready for enthusiastic co-operation, and will arrange the transfer from any part of the State to the training ship of suitable boys, aged 14 to 17." The chief probation officer has announced that "the proposed schoolship is sought without thought of making it an institution for probation," and U. S. Senator Phelan adds (in a telegram to Acting Secretary of the Navy, Franklin D. Roosevelt) that "no conflict arises between Naval School at Goat Island or Shipping Board."

As a result of all this push and hustle the stationing at San Francisco of a training ship in the near future is fast developing into a certainty. The consensus of local opinion favors the selection of the "Hartford" for the purpose, because of the belief that her historic associations would act as a powerful mental stimulus to boys receiving their training on board of her.

But, if the "Hartford" cannot be had, then some other ship must be accepted. J. H. Rosseter, of the Shipping Board, has said that "it might possibly be arranged to secure one of the sailing vessels belonging to the Shipping Board, such as the "Monongahela," the "Mucoto" or the "Arapahoe," but this would involve expense of fitting up suitable quarters and other accommodations." Anyway, and as stated before, San Francisco is now practically certain soon to have a training ship all to her lonesome self. And, judging from the way she is reaching out for it, the city that "knows how," like the little boy in the advertisement, won't be happy till she gets it.

"HELLFIRE" WELL NAMED.

In last week's JOURNAL we told our readers as well as we could from the scanty information at our disposal at the time, of the murderous doings on board of the American barkentine "Puako" on a recent voyage from Victoria, B. C., to Cape Town, South Africa. We made it plain—or tried to, at any rate—that her brutal skipper, Captain Adolph C. Pederson, alias "Hellfire Pedersen," and his equally brutal sons, the two mates, were as thorough-paced buckoes as ever wielded belaying-pin or sported brass knuckles in the darkest days of American "hellships." It is a question, indeed, if there is to be found recorded even in the "Red Record" (published by Walter Macarthur some twenty-odd years ago) a case of knock-down-and-drag-out, man-killing buckoism equaling in barbarity the treatment meted out to the late hapless crew of the "Puako" by those inhuman monsters, the "Hellfire Pedersens." If ever two villains deserved the hangman's noose or the electric chair, the cowardly scoundrels who drove poor Hansen to his death surely do.

Having borne with us thus far, we invite you to read the following affidavit:

Affidavit.

J. Osman, age 33, seaman, native of Russia, under oath states: In December 1910 I shipped at Sydney, N. S. W., as seaman on board the barkentine "Puako," master Adolph C. Pedersen, for a voyage to San Francisco, Cal., arriving at the latter port February 28, 1911, being on board 76 days. In Sydney one night said Adolph C. Pedersen came on board at 1:30 a. m. with two sporting women and came forward to the cook's quarters and ordered him to cook and serve coffee. On the cook, a Japanese, refusing, he fired two shots at him, the bullet holes no doubt still being visible on the deck near the cook's bunk. I heard this because the cook's quarters are near the forecastle and the noise woke me up. I also saw these bullet holes. One day at sea while I was at the wheel, said Adolph C. Pedersen called me a vile name and ordered me to leave the wheel, saying I was letting sprays come on board, enforcing his order with pointing his gun at me. He ordered me then, supposedly as punishment, to remake the gaskets of the fore skysail, this sail then being set and it is considered by seamen extremely dangerous to go on this yard with the sail set. On completing this task I was again ordered to take the wheel.

Signed, J. OSMAN.

State of Washington,
Grays Harbor County, ss.

I, J. E. Stewart, a Notary Public in and for the State of Washington, residing at Aberdeen, in said County, do hereby certify that on this 4th day of April, 1919, personally appeared before me J. Osman, to me known to be the individual described in and who executed the within instrument and acknowledged that he signed and sealed the same as his free and voluntary act and deed for the uses and purposes therein mentioned.

Given under my hand and official seal this 4th day of April, 1919.

Signed, J. E. STEWART,
Notary Public in and for the State of Washington, residing at Aberdeen.

There you have it; shooting at a defenseless man, and trying to murder another by sending him out on the skysail yard without first lowering the yard down on to the lifts. If that does not prove that "Hellfire Pedersen" is either a cold-blooded, murdering villain or a homicidal maniac, then nothing much more we could say would ever convince you. To our way of thinking he is an unsafe man to be at large; and should either be put away under the sod, or sent to an asylum for the criminally insane. And that, one or the other, will probably be his fate if the authorities in New York, now trying him for murder on the high seas, do their duty.

TO AID TOM MOONEY.

A number of newspaper editors from the Seventh Federal Reserve District recently held a conference in Chicago in the interest of the Victory Liberty Loan. Attending the conference were also many editors of labor papers.

The labor editors made use of the occasion to hold a little conference of their own to discuss the world-wide efforts to free Thomas J. Mooney. It was conceded by all present that Mooney had been unjustly convicted of the crime charged against him, and must therefore be presumed to be innocent. That point being disposed of, the discussion centered upon ways and means to aid in freeing him.

The plan of the radical element in the ranks of labor to call a general, Nation-wide strike as a means to aid Mooney, was disapproved of. It was held by the conferees that the better way to aid him was to raise funds for the purpose of apprehending the parties really guilty of the Preparedness Day bomb explosion in San Francisco in 1916.

Finally a resolution to that effect was introduced by C. O. Taylor, of Grand Rapids, Mich., editor of "The Observer." Omitting the preamble, the resolution reads as follows:

RESOLVED, That the United States Department of Justice be called upon to bend its efforts to this end, and be it further

RESOLVED, That it is our best judgment that an assessment in the amount of money necessary to aid in apprehending the guilty

arties be levied by all unions affiliated with the merican Federation of Labor, and be it further RESOLVED, That such moneys as may be aised for this purpose be placed in the hands f the executive council of the American Fedration of Labor, to be used by them for the bject named, to the end that the real perpetraors of the outrage be apprehended and punshed as the law prescribes.

The resolution was adopted unanimously.

We haven't a doubt in the world that our steemed fellow labor editors were quite incere, and had the best of intentions, when hey adopted that resolution. But, it seems o us that the presumption of Mooney's nnocence carries with it the obligation on our part to see to it that he is set free at nce, or at the very least given a new trial, rrespective of whether the parties for whose rime he is suffering imprisonment are ever aught or not.

Of course, it will be said that the surest way of freeing him is to apprehend those parties. Granted; but we are strongly inclined to think that the chances of their aprehension at this late day are about as good as the chances of a drowning man to save himself by grasping at a straw; or of finding he proverbial needle in a haystack. And it surely cannot be the intention of our fellow abor editors to let Mooney rot away in jail for years and years—for life, may be—on chances so slim as that!

But, it may be asked, how then is Mooney o be set free? Well, it has been truly said hat there isn't a thing in the realm of the possible that the workers cannot accomplish f they will only act together, and act intelligently. In a political democracy like ours, hat means that if the workers want anything, o get it they must exert not only their economic power, but also their political power—and a little more so, perhaps. The men who could set Mooney free with a stroke of the pen are a good deal more impressed by how the workers vote than they are by how the workers strike. A word to the wise, etc.

The U. S. Shipping Board informs the JOURNAL that from the establishment of its squadron of Merchant Marine Training ships in January, 1918, to April first of this year 22,523 American citizens were accepted for training on the ships as apprentice sailors, firemen and stewards, a majority being under 25 years of age. Supplementing this information the Board further states that, right now, it wants 2,000 more young men for training as apprentices.

The Board also announces that its free schools for Merchant Marine officers, established in June, 1917, to give experienced seamen and engineers special training to fit them for license examinations, had graduated up to April first, 1919, 8109 men, all Americans. In this total, deck officers and engineers were almost equally represented.

"I look upon conscription as the taproot of militarism."—Gen. Smuts.

You said a mouthful there, mister.

What's become of the old-fashioned sailor who used to say, at parting, "Well, s'long, Bill; see you again in Liverpool."?

An old saying brought up to date—Trust in the League of Nations and keep your powder dry.

Isn't it about time for someone to get out a book on How To Be Happy Though Dry?

CONVENTION CALL!

Labor Omnia Vincit.

AMERICAN FEDERATION OF LABOR
Washington, D. C.

To All Affiliated Unons, Greeting:

You are hereby notified that, in pursuance of the Constitution of the American Federation of Labor, the Thirty-ninth Annual Convention of the American Federation of Labor will be held at the Steel Pier, Atlantic City, N. J., beginning 10 o'clock Monday morning, June 9, 1919, and will continue in session from day to day until the business of the convention has been completed.

Representation.

Representation in the convention will be on the following basis: From National or International Unions, for less than 4,000 members, one delegate; 4,000 or more, two delegates; 8,000 or more, three delegates; 16,000 or more, four delegates; 32,000 or more, five delegates; 64,000 or more, six delegates; 128,000 or more, seven delegates, and so on; and from Central Bodies and State Federations, and from local trade unions not having a National or International Union, and from Federal Labor Unions, one delegate.

Organizations to be entitled to representation must have obtained a certificate of affiliation (charter), at least one month prior to the convention; and no person will be recognized as a delegate who is not a member in good standing of the organization he is elected to represent.

Only bona fide wage-workers, who are not members of, or eligible to membership in other trade unions, are eligible as delegates from Federal Labor Unions.

Delegates must be elected at least two weeks previous to the convention, and their names forwarded to the Secretary of the American Federation of Labor immediately after their election.

Delegates are not entitled to seats in the convention unless the tax of their organization has been paid in full to April 30, 1919.

It is, of course, entirely unnecessary here to enumerate all the important subjects with which our forthcoming convention will concern itself, but the reminder is not at all amiss that every effort must be made to broaden the field and means for the organization of the yet unorganized workers; to strive to bring about more effectually than ever a better day in the lives and homes of the toilers; to defend and maintain by every honorable means in our power the right to organize for our common defense and advancement; for the exercise of our normal and constitutional activities to protect and promote the rights and interests of the workers; to assert at any risk the equal rights before the law of every worker with every other citizen; to aid our fellow-workers against the effort to entangle the workers in the meshes of litigation before the courts in the several States; to make effective in our everyday lives the principle declared in the law of our Republic (the Clayton law), "That the labor of a human being is not a commodity or article of commerce;" to arouse our fellow-workers and fellow-citizens to the danger which threatens to curb and take away their guaranteed rights and freedom; to meet and help solve the vexatious problems of peace and reconstruction. These and other great questions of equal importance will, of necessity, occupy the attention of the Atlantic City Convention.

Therefore, the importance of our movement, the duty of the hour and for the future, demand that every organization entitled to representation shall send its full quota of delegates to the Atlantic City Convention, June 9, 1919.

Credentials.

Credentials in duplicate are forwarded to all affiliated unions. The original credential must be given to the delegate-elect and the duplicate forwarded to the American Federation of Labor office, A. F. of L. Building, Washington, D. C.

The Committee on Credentials will meet at the headquarters of the American Federation of Labor six days previous to the opening of the convention, and will report immediately upon the opening thereof at Atlantic City, hence secretaries will observe the necessity of mailing the duplicate credentials of their respective delegates at the earliest possible moment to Washington, D. C

Resolutions—Time Limit.

Under the American Federation of Labor Constitution resolutions of any character or propositions to change any provision of the Constitution can not be introduced after the second day's session without unanimous consent.

Grievances.

Under the law no grievance can be considered by the convention which has been decided by a previous convention, except upon the recommendation of the Executive Council, nor will any grievance be considered where the parties thereto have not themselves previously

(Continued on Page 11.)

OFFICIAL.

SAILORS' UNION OF THE PACIFIC.

Headquarters, San Francisco, Cal., Apr. 21, 1919.
A synopsis of the minutes of the regular meeting held on the above date will be published in next week's issue.
JOHN H. TENNISON,
Secretary pro tem.
Maritime Hall Bldg., 59 Clay Street. Tel. Kearny 2228.

Victoria, B. C., April 14, 1919.
No meeting; shipping slow; members scarce.
J. ETCHELLS, Agent.
Room 11, de Cosmos Block, 1424 Government Street.

Vancouver, B. C., April 14, 1919.
Shipping fair; prospects good.
W. G. MILLARD, Agent.
58 Powell Street E. P. O. Box 1365. Tel. Seymour 8703.

Tacoma Agency, April 14, 1919.
No meeting. Shipping and prospects uncertain.
H. L. PETTERSON, Agent.
2016 North 30th St. Tel. Main 808.

Seattle Agency, April 14, 1919.
Shipping fair.
P. B. GILL, Agent.
84 Seneca St. P. O. Box 65. Tel. Main 4403.

Aberdeen Agency, April 14, 1919.
No meeting. Few men around; shipping fair.
ED. ROSENBERG, Agent.
P. O. Box 280. Tel. Main 557.

Portland Agency, April 14, 1919.
Shipping good; prospects good.
JACK ROSEN, Agent.
88½ Third Street. Tel. Main 6013.

San Pedro Agency, April 14, 1919.
Shipping fair.
HARRY OHLSEN, Agent.
128½ Sepulveda Bldg., Sixth St. P. O. Box 67. Tel. 137 R.

Honolulu Agency, April 7, 1919.
Shipping poor; prospects poor.
JACK EDWARDSON, Agent.
P. O. Box 314. Tel. 2526.

MARINE COOKS' AND STEWARDS' ASSOCIATION OF THE PACIFIC COAST.

Headquarters, San Francisco, Cal., Apr. 17, 1919.
No meeting, no quorum. Shipping improving.
EUGENE STEIDLE, Secretary.
42 Market Street. Phone Kearny 5955.

Seattle Agency, April 11, 1919.
Shipping good. Scarcity of cooks and bakers.
LEONARD NORKGAUER, Agent.
Grand Trunk Dock, Room No. 203; P. O. Box 214. Phone Main 2233.

San Pedro Agency, April 11, 1919.
No meeting. Shipping fair; few members ashore.
JOE MACK, Agent.
613 Beacon St. Phone Sunset 336. P. O. Box 54.

DIED.

Carl Robert Anderson, No. 1027, a native of Sweden, age 45. Died at Sacramento, Cal., April 17, 1919.

Alex Martinson, No. 963, a native of Russia, age 50. Died at San Francisco, Cal., April 18, 1919.

The Railroad Commission authorized the Cousins Launch & Lighter Company, operating on Humboldt Bay, to increase its rates for towing, passenger carrying and freight and lumber transportation. The principal increases are on lumber, the new schedule calling for a charge of $1.47½ as against $1; a thirty-five cent increase in the rate for hauling wood and a $1 increase in the price of commutation tickets sold to workmen employed at the Rolph shipyards and living in Eureka. The company was ordered to discontinue the giving of passes to the superintendent, head clerk and four office employes of the Rolph shipyard.

OUR WASHINGTON LETTER.

(By Laurence Todd.)

While President Wilson is trying to make the reactionary diplomats at Paris understand that they must yield something to the spirit of industrial democracy, lest industrial democracy rise up and convert them into grease spots on the European map, he is not getting any noticeable help from home. The railroad stockholders and their directors and lawyers are trying to find a few labor leaders to betray the principle of Government ownership and democratic industrial management of the railroads. The Standard Oil and Guggenheim crowd is looking for pretexts for a war against Mexico, in order that they may grab the Tampico oil field and the metals down there. The kept press is promoting the ancient fake about a Japanese deal with Mexico, to start a new "preparedness" campaign.

Look at this railroad matter first. President Harry Wheeler of the U. S. Chamber of Commerce, who is boss of one of the Armour banks in Chicago, called a lot of the railroad magnates here to discuss the future of the railroad properties. They dressed the thing up with such dignitaries as Paul Warburg, the banker, and President Hadley of Yale University, who is a director of the New Haven road. Then they called in a few labor men. Everybody was pledged to deep secrecy as to what was to be done, until it should be finished. They have had several conferences, but are not through yet.

Doak of the Brotherhood of Railway Trainmen, Ryan of the Carmen, Jewell of the Machinists, Hoberling of the Switchmen and Henry Starling, legislative agent of the A. F. of L., were each present at one or more of the sessions. As nearly as can be learned thus far, Warburg took charge of the program and began to try to win the labor men over to the notion that Congress was going to give the roads back to the private stockholders anyhow, and so the railway workers had better come to an understanding with them at once.

Who owns the railroads in this country?

The Interstate Commerce Commission has been looking that point up, and it reports, this week, that a mere handful of people own the majority of the stock. The total number of persons and firms that own any railroad stock is 627,930, but only 8,301 persons, estates, etc., hold a controlling majority of all stock in the railroads of the United States. That is, 1.3 per cent. of the stockholders are the controlling factor.

The immensely rich Philadelphia & Reading company is owned by thirteen stockholders. There are just seventeen shareholders in the Pennsylvania Company, and only sixteen in the Oregon Short Line. The Chicago, Burlington & Quincy has 326 stockholders, but 99.5 per cent. of the stock is owned by twenty of them.

As for the bondholders, life insurance companies and savings banks have over two billion dollars in railroad bonds.

These figures give an indication of how few are the real dictators of the policy of private management of the railroads as compared with the railway workers. They are 8,300 compared with 2,000,000, or something like 1 big stockholder to 240 railroad workers.

William H. Johnston, president of the International Association of Machinists, which now claims 340,000 members, has an article in the Machinists' Monthly Journal for April, on "How Labor Defines Democracy." In it he says: "We hold the principle underlying successful modern industry is co-partnership. If that be true, then the workers have a right to consideration and a voice in determining conditions under which they work and live. Success in industry does not depend altogether upon the management or upon the employes, but upon the combined efforts of both. Hence, the men who put their lives and souls into industry have a right to a voice as much as the men who put in their cold dollars, and labor from this time on is going to insist more and more upon having a larger voice in determining conditions under which it works."

He says further: "It is claimed by some that the object of the Kaiser in precipitating this war was not altogether to win greater power, but behind it all was the effort to crush the rising spirit of democracy in the Fatherland. But the Kaiser overshot his mark, and the industrial kaisers in this country who are now attempting to tear down what little concessions labor has gained had better take warning, or they, too, will overshoot their mark."

Look now for a moment at the Mexican affair. As John Murray has so clearly pictured the thing in The Survey, the Carranza government is being choked and threatened by the foreign bankers, oil companies and diplomats, into surrendering not merely the Tampico oil, which is the one last bit of national wealth that has not yet been given away, but into withdrawing from the Mexican constitution the right of workers to strike. No more outrageous crime against labor was ever planned, than this scheme of Standard Oil and its agent Doheny on the one hand, and the British oil interests on the other, to make Mexico a nation of industrial serfs once more. There is a tragic significance in the fact that within the past few days the United States Government has "permitted" the shipment of two million rifle cartridges into Mexico, for the Carranza government. It spells Carranza's surrender to foreign capital. Those bullets will be stopped by Mexican workers' bodies, if they are used.

The wild story about a big Japanese colony being planted in Mexico, just south of the California line, is another of these stabs in the back of President Wilson. This one was sprung by his "friend" Senator Phelan of California, who is political god-father to National Democratic Committeeman Doheny —the chief schemer in the Tampico oil plot. Just when the President needs help in putting the lid on the crazy militarists of Europe, and when nine-tenths of the returned soldiers are saying that it's time to disarm the world, Phelan stirs up a Japanese war scare, complicated by a Mexican war scare, and looks around for applause from the soldiers.

It is quite possible that what is now jokingly known as the "Cradle Roll," and the "Junior League," the organization of war veterans headed by Roosevelt Junior, Clark Junior, Morgan Junior, McAdoo Junior and other commissioned sons of prominent fathers—will help the Phelan-Doheny oil jingoes to demand another huge national outlay on war material. But all indications observed in Washington point to an overwhelming opposition, soon to be organized.

Every soldier, sailor or marine ought to take notice of the fact that a nationwide organization of the enlisted men is going to be created very shortly. This organization will come from trade union sources and from the organized farmers. It will carry its own credentials, which every labor man and every organized farmer will recognize. It will have no commissioned officers, no social caste, no reactionary schemers inside its membership. Labor men here are studying the moves to be made. They are going to make this great association of service men a success. It is going to be the right arm of labor. It will make these commissioned "leaders" realize, before many weeks, that industrial democracy, not snobbery and reaction, is the legitimate child of the Great War.

When the returned soldiers and sailors do become fully organized, and begin to make an impression upon the State and Federal lawmakers, it is possible that we shall see some rapid improvements in the land situation. In the annual report of the California Commission of Immigration and Housing, just issued, the Commission announces that it has made a survey of the large holdings of land in Southern California. It finds, among other things, that in the eight counties of Southern California there are 255 holdings, each of more than 2,000 acres, comprising a total of nearly 5,000,000 acres. In five of these counties the Southern Pacific land grants and "lieu lands" amount to nearly 2,600,000 acres. Of the land in farms in these counties, 50 per cent. are owned in about 250 holdings.

These returned soldiers are now unemployed—tens of thousands of them. Unemployment is more acute today, according to the Department of Labor, than at any previous time since the war began. They will take no especial comfort, while hunting for jobs, to learn that one of these railroad land holdings in Southern California is 183,399 acres, another 101,000 acres, and seven exceed 50,000 acres each. The soldiers are going to demand that the big land holdings be broken up into small farms.

Maybe, too, they will demand that the big holdings of railroad stock be broken up. Or, since the Government will have to take them over, the huge fortunes may, upon request from the organized soldier boys, be chopped off to a certain maximum.

That seems to be indicated by the drift of sentiment here and abroad. A reactionary Congress to the contrary notwithstanding. Unemployment must be met by actual economic remedies, not by parades.

The younger generation of Filipinos is looking forward with more favor on commerce and industry when choosing their future careers. Heretofore government positions and professions have been preferred. There has been an almost universal disposition to regard trade as an occupation fit only for women and Chinese and other foreigners, and to be engaged in by ambitious Filipino men only in case of urgent necessity. Recently, however, a new attitude toward trade has become noticeable. About a year ago a large number of young men left the government service to take up business. This change is undoubtedly due in a large measure to a better understanding of the relation of business to national existence and to the fact that business in the Philippines has recently become more profitable than either politics or the professions.

Demand the union label upon all purchases!

WILD ANIMAL TRADE.

Germany has lost the wild animal trade of the world. When in that year the Kaiser came to der Tag, only to find after more than four years that he had mistaken the date, what amounted to almost a monopoly went the way of so much of the rest of the world's commerce which the Huns had got into their hands through the years.

Up to then the two leading concerns from which zoological parks and circuses the world over made their purchases of wild animals were Carl Hagenbeck's Sons (formerly Carl Hagenbeck) of Hamburg and Louis Ruhe of Alfred, says J. Olin Howe in the New York Tribune. There were a number of other German concerns, a few English—which were more apt to deal in the smaller animals and in birds nowadays—and some Chinese companies which operated in the Himalayas and Eastern India; and occasionally independent hunters or sportsmen from England or the United States would bring in an exhibition animal.

Africa is the wild animal paradise, and especially German East Africa, and Hagenbeck had this continent thoroughly covered with his agents. The more important of them were in Pretoria, Natal, Capetown, Zanzibar, and Cairo, but no trading post of any consequence on African coast or railroad was without a Hagenbeck representative. One of their men named Mayer had his headquarters in Zanzibar for years and periodically fitted out safaris to go into the bush after animals. Large numbers would be captured and the outfit would start for the coast again. Many of the animals would die on the way, but Mayer usually arrived at salt water with enough to make a shipment to Hamburg.

Not all of the Hagenbeck agents pursued this plan. Indeed, it was far more usual for them to buy animals offered by hunters or farmers than to go after them themselves, and to this end the Hamburg concern maintained agents in every country in the world where exhibition animals are to be obtained—especially in India and South America.

The United States and England were the chief patrons of these German animal men.

A CALL TO STEEL WORKERS.

On Sunday, May 25th, at 10 a. m., in the Union Labor Temple, Pittsburgh, Pa., a national conference will be held of representatives of all the unions of every craft in the iron and steel industry throughout the United States. This great conference will be held under the auspices of the National Committee for Organizing Iron and Steel Workers. Its purpose is to devise ways and means to complete the organization of the workers in the iron and steel mills, so that they can reap the benefits of unionism in the shape of higher wages, shorter hours, and better working conditions.

The miners, railroad men, building tradesmen, packing house employees, shipyard workers, garment workers, printing tradesmen and many other classes of workers are strongly organized and are enjoying good conditions. While the mill workers are trembling in fear of wage reductions, these united workers are continuously marching ahead to better conditions. It is high time that the iron and steel workers followed their example by completing their organization.

The national conference on May 25th will be one of the most important gatherings of working men ever held on the American continent. It will mark an epoch in the industrial history of this country. Delegates from the great mills at Gary, Bethlehem, Steelton, Birmingham, South Chicago, Pittsburgh, Homestead, Youngstown, Cleveland, Joliet, Indiana Harbor, Pueblo, Duluth, McKeesport, Duquesne, Chicago, Leechburg, Clairton, New Castle, Steubenville, Mingo, Wheeling, Bellaire, Milwaukee, Braddock, Rankin, Donora, Monessen, Charleroi, Peoria and many other places will be present.

President Gompers, Secretary Morrison, the Executive Council of the American Federation of Labor, the Presidents and Secretaries of the twenty-four international unions co-operating in the great drive to organize the steel industry, and the members of the National Committee for Organizing Iron and Steel Workers, have all been invited to attend.

All local unions, of every trade, regularly affiliated with their respective international unions and the A. F. of L., having members employed in iron and steel plants, or having jurisdiction over men employed in these plants, are urged and invited to send delegates. This includes Blacksmiths, Boiler Makers, Brick and Clay Workers, Bricklayers, Bridge and Structural Iron Workers, Coopers, Electrical Workers, Foundry Employees, Iron, Steel and Tin Workers, Machinists, Mine, Mill and Smelter Workers, Mine Workers, Molders, Pattern Makers, Plumbers and Steam Fitters, Quarry Workers, Railway Carmen, Seamen, Sheet Metal Workers, Stationary Firemen, Steam and Operating Engineers, Steam Shovel and Dredgemen, Switchmen, etc., etc., working in the iron and steel industry proper.

All unions, regardless of size or craft, are entitled to two delegates apiece.

Now is the time for the iron and steel workers to get busy! Hurry up! Organize! Elect delegates to this historic conference! Don't fail to have your plant and town fully represented.

For further information apply to
National Committee for Organizing Iron and Steel Workers.

JOHN FITZPATRICK,
Acting Chairman.
WM. Z. FOSTER,
Secretary-Treasurer.
303 Magee Bldg.,
Pittsburgh, Pa.

MAKING MEXICO "SAFE."

In order to protect holders of Mexican securities of all kinds, an international committee of twenty bankers—ten from America, five from France and five from England—has been formed, of which J. Pierpont Morgan is chairman. The announcement states that the committee "has been constituted for the purpose of protecting the holders of securities of the Mexican Republic, and of the various railway systems of Mexico, and, generally, of such other enterprises as have their field of action in Mexico. The committee will be prepared to take such further steps as may seem wise in order to afford counsel and aid to investors who hold interests in Mexico.—Department of Labor Research, International Labor News Service.

A DECREE ABOLISHING CLASSES.

The following Russian decree is reported to have been confirmed by the Russian Central Executive Committee of the Soviets of Workmen's and Soldiers' Deputies:

1. All classes and class divisions of citizens, class privileges and disabilities, class organizations and institutions which have until now existed in Russia, as well as all civil ranks, are abolished.

2. All designations (as merchant, nobleman, burgher, peasant, etc.), titles (as Prince, Count, etc.), and distinctions of civil ranks (Privy, State, and other Councillors), are abolished, and one common designation is established for all the population of Russia—citizen of the Russian Republic.

3. The properties of the noblemen's class institutions are hereby transferred to corresponding Zemstvo self-governing bodies.

4. The properties of merchants' and burghers' associations are hereby placed at the disposal of corresponding municipal bodies.

5. All class institutions, transactions and archives are hereby transferred to the jurisdiction of corresponding municipal and Zemstvo bodies.

6. All corresponding clauses of the laws which have existed until now are abolished.

7. This decree becomes effective from the day of its publication, and is to be immediately put into effect, by the local Soviets of Workmen's, Soldiers', and Peasants' Deputies.

Labor's Economic Platform

Following is the Economic Platform adopted by the American Federation of Labor:

1. The abolition of all forms of involuntary servitude, except as a punishment for crime

2. Free schools, free text books and compulsory education.

3. Unrelenting protest against the issuance and abuse of injunction process in labor disputes.

4. A work day of not more than eight hours in the twenty-four hour day.

5. A strict recognition of not over eight hours per day on all Federal, State or municipal work, and not less than the prevailing per diem wage rate of the class of employment in the vicinity where the work is performed.

6. Release from employment one day in seven.

7. The abolition of the contract system on public work.

8. The municipal ownership of public utilities.

9. The abolition of the sweat-shop system.

10. Sanitary inspection of factory, workshop, mine and home.

11. Liability of employers for injury to body or loss of life.

12. The nationalization of telegraph and telephone.

13. The passage of anti-child labor laws in States where they do not exist and rigid defense of them where they have been enacted into law.

14. Woman suffrage co-equal with man-suffrage.

15. Suitable and plentiful playgrounds for children in all cities.

16. The Initiative and Referendum and the Imperative Mandate and Right of Recall.

17. Continued agitation for the public bath system in all cities.

18. Qualification in permits to build of all cities and towns, that there shall be bathrooms and bathroom attachments in all houses or compartments used for habitation.

19. We favor a system of finance whereby money shall be issued exclusively by the Government, with such regulations and restrictions as will protect it from manipulation by the banking interests for their own private gain.

WEEKLY NEWS LETTER.

(Continued from Page 3.)

cent. on or before November 11, with accrued interest on deferred installments.

Payment in full can be made on May 20, the 10 per cent. required with application having been duly paid on or before May 10. Payment can also be completed on any installment date with accrued interest.

Suggests New Election.

In a controversy between officials of the city of Jackson, Mich., and Fire Fighters' Union No. 87, the National War Labor Board recommends that a referendum vote by citizens be had on the board's wage award.

Last January increased wages and a two-platoon system were rejected by a referendum vote of Jackson citizens and the board now states that "it is not clear that the vote would have been the same as to increased wages had that been the only issue presented."

If the vote is favorable the wage award will date back to last October.

Land Values Increase.

Farm lands in the United States are steadily increasing in value, reports the Department of Agriculture. The average grade of plow lands was worth about $74.31 per acre on March 1 this year, compared with $68.38 a year ago, $62.17 two years ago and $58.39 three years ago.

The greatest percentage increase during the last year occurred in the South Atlantic States, in the Carolinas and Georgia, and extended to Alabama, Kentucky and Arkansas. Small or no increases were made in the New England States, the Pacific Coast States and Louisiana, Texas, Kansas and Montana. Material increases were reported from Nebraska and South Dakota.

Iowa's plowing lands stand first in value, the average being $169 per acre, followed by Illinois with $144; California with $121 and Indiana with $100. Alabama reports the lowest average value at $24 per acre, and Mississippi is next at $25.50.

Death Penalty Restored.

Capital punishment has been restored in Nevada by Governor Boyle permitting an amendment to the present murder act to become a law without his signature. The law makes "any kind of wilful, deliberated and premeditated killing murder in the first degree, punishable by death or life imprisonment, in the discretion of the jury."

Trade Union College.

The Boston Central Labor Union has started a college where workers may secure an education on any subject they desire. Some of the most notable and liberal-minded educators in the East have become interested in the project and the Boston Globe says:

"Academic freedom will not worry instructors; they will have nothing to fear from not pleasing the donors of the college—because it has no endowment."

The policy of this college will not be shaped "from above," in secret meetings of the faculty—it will be shaped by a committee on which members of the unions sit with the instructors. The final decision in any matter may be referred to the Central Labor Union as a whole.

Strike for Safety.

Iron molders employed at the plant of the Wheeling Mold and Foundry Company suspended work rather than risk their lives with inexperienced cranemen who have taken the places of striking electrical workers.

This company and its iron molders attracted wide attention last September by a decision by Chief Justice of the North Carolina Supreme Court, acting as umpire for the National War Labor Board, who declared that while employers and workers were patriotic during the war, the employer received increased profits from the Government, while the worker gave to the Government.

The umpire said:

"The employers have, as a rule, patriotically given full aid to the prosecution of the war by placing their splendid plants and their highly skilled chiefs at the service of the Government. The employees, as a rule, have also, with the same patriotism, yielded the eight-hour limitation wherever it has been necessary to speed up production for the Government. The former have received great increase in profit. Th latter has contributed an increase in the hours of labor, and vast numbers of men to fill our armies. The former have received from the Government; the latter have given to it. They should not be asked to do so beyond the necessity of the occasion."

Part-Time Plan Not New.

It has been generally assumed by many writers on vocational education that the plan of part-time instruction in the shop and school is an innovation of the twentieth century. Such, however, is not the fact. Part-time instruction was not an uncommon thing during the colonial times in America. A bulletin in preparation by the federal board for vocational education shows that the indentures in Philadelphia in the years 1771-1773 very frequently made provision for the apprentice attending either day or evening schools or both.

Garment Workers Win.

The International Ladies' Garment Workers' Union has won its three-months' strike against the Dress and Waist Manufacturers' Association, an organization that had declared unyielding opposition to the union's demands.

The manufacturers have been forced to agree that hereafter when an employee is discharged he will be accorded the right to have his case reviewed by an impartial tribunal. This demand aroused the greatest opposition of the employers who declared that the unionists were attempting to establish themselves in jobs for life.

But the strikers refused to waive this demand and the employers were finally forced to accept it.

Other gains are: A union-shop agreement; a 44-hour week; a wage increase for week workers that ranges from $1.50 to $3 a week, with piece workers to be increased; workers discharged for union activity are to be immediately reinstated with pay for time lost and those unjustly discharged after being employed four months are to be immediately reinstated with back pay. These protections, the unionists show, will make it impossible for manufacturers to victimize any active worker in their movement.

About 12,000 workers are affected by this settlement. The strike originally involved about 40,000 workers, but manufacturers outside of the association settled with the union a few weeks ago.

MURDER IS DECREASING.

The number of murders in New York City has been markedly decreasing, until the total for the last year is only a little more than half the figure of less than ten years ago. In 1918 there were 215 cases of homicide in the city; in 1909 the number was 401. The figure for 1917 was 255. The records are not kept many years back, but the 1909 figure is said to be a fair average for the early years of the century.

"About 400 murders a year there were in those days," said Captain Donovan of the Lost Property Bureau, who has those records in charge. "That average kept up for two or three years after 1909; then the enforcement of the Sullivan law brought the figure down. After a while people began to get pistols by going over to Jersey, and there was a little jump in the number of murders. But for the last few years the figure has been low, and now it has struck a low level.

"Most of the murders nowadays are the outcome of quarrels between hot-headed foreigners or among gangsters of one kind or another; a few are the result of labor quarrels. The number of murders that have any real human interest is very small."

"Statistics show," said Second Deputy Commissioner Lahey, "that in the matter of murders conditions are better in our city than in any large city in the country. I mean that in proportion to the population there are fewer homicides here. Moreover, conditions are constantly improving. When you consider the ratio of homicides to population you can see how great the decrease has been."

TRANSPORTING RUBBER.

The lack of suitable harbors in Sumatra and other Far Eastern countries, where a large part of the crude rubber used in this country is produced, works a great inconvenience in the transportation of this raw material overseas. At present, plantation owners are compelled to load their crude rubber on lighters, which transport it out to the ocean liners that, on account of the lack of docking facilities, must anchor off shore. This necessitates an extra handling of the shipment. Realizing the great importance of a deep harbor on the east coast of the island to accommodate the ocean steamers that must transport the rapidly increasing production of crude rubber across the Pacific, the Government of Netherlands East Indies is about to construct a $4,000,000 harbor at Belawan, the seaport for Medan, which is fifteen miles inland, in the center of a large rubber-producing region. It is planned to dredge a harbor deep enough to afford docking facilities for the largest vessels. About three years will be required to complete the gigantic project.

RECORD OF THE CHEROKEES.

Cherokee citizens of eastern Oklahoma point with pride to the fact that the Cherokees in this war, as well as other wars in which the United States has engaged, have borne an honorable and valorous part. Cherokees have fought side by side with members of the white race from a very early period. The "friendly Indians" who accompanied Colonel George Washington and his "Virginia Blues," and who with the "Blues" prevented the utter extermination of Braddock's army, are said to have been Cherokees, their ancient ancestral land having been embraced in Virginia. And when the colonial soldiers of Virginia took part in the destruction of Fort Duquesne there were quite a number of Cherokee warriors with them. All through the colonial period the Cherokees were at various times allied with the colonists in suppressing the more hostile Indians of other tribes, though there were times when they, too, fought the colonists. In the war of 1812 the Cherokees raised a regiment, joined the forces of General Andrew Jackson, and bore a prominent part in chastising the hostile Creeks. A number of Cherokees are said to have gone to Mexico as soldiers, but not as an individual military force. In Civil War times three Cherokee regiments under the command of Colonel William A. Phillips of the Sixth Kansas Cavalry saw service under the Stars and Stripes. In the war with Spain, Cherokees served in Cuba, some being members of the famous Rough Rider regiment. Others served in the Philippines and some in China at the time of the Boxer uprising.

PRUSSIANS OUTSIDE OF GERMANY.

It may not be very long before the American people will apply the term "moral treason" to the aims and acts of that coterie of gentlemen so eager to "smash Wilson" as to forget that he is still the President of the United States meeting in councils of utmost delicacy and difficulty with representatives of countries other than our own. But one must not forget that there is some satisfaction felt abroad over every American who tries to "show up the President." The non-German Prussians of London, Paris, and Rome take comfort in the sayings and doings of their fellow Prussians in America. Prussians have a common tongue whether their native speech be English, French, or Italian. Its accents are always unmistakably Bourbon.—Rabbi Stephen S. Wise.

THE USE OF COAL.

In the reign of Edward I the inhabitants of London petitioned the king against the growing use of coal, declaring that it was "a public nuisance, corrupting the air with its stink and smoke, to the great detriment of their health." Whereupon the king prohibited its use, offenders to be punished for a first offense by a fine, and for a second offense to have their kilns and furnaces destroyed. The practice of using coal was at last made a capital offense, and a man was tried, condemned, and hanged for burning coal in London.

FREE LETTER POSTAGE IN RUSSIA.

A degree of the Council of People's Commissaires, published in the "Izvestya," the organ of the Central Executive Committee, of the 24th of November, 1918, No. 257: "The Soviet of People's Commissaires, believing that a more steady and widespread exchange of written communications between the proletarians of the cities and the poorer classes of the villages will further serve to strengthen and confirm the union already existing between them, and will in this manner aid in organizing the revolutionary Socialist forces of Russia, considers it essential to simplify and facilitate the exchange of postal communications. With these objects in view, the Soviet of People's Commissaires decrees as follows: (1) After January 1st, 1919, there will be free transmission in Russia of all open and sealed written communications, weighing not more than fifteen drams (about one ounce); (2) unregistered letters weighing more than fifteen drams, as well as registered letters, will be paid for at the full regular rate, in stamps covering charges for weight and registration; (3) unregistered letters and packages sent by Soviet institutions, pay no charges; (4) the delivery without charge, of unregistered open communications is extended also to cover the correspondence entering the confines of Soviet Russia from other countries."

AFRICAN PATIENCE.

The French colonials are picturesque and have their own way of doing things, according to an American flight lieutenant from overseas. But their methods are handed down from their ancestors. "We were building a hydroplane shipway at Brest," said the lieutenant, "and the job meant sinking a concrete foundation out in the water when the tide was low. It had to be done in a hurry, of course, and I was given a detachment of Algerians. I tried my best to impress upon them the necessity for speed. I put a squad to work carrying crushed stone from a pile up on the beach down to the water's edge. I gave them wheelbarrows and shovels, and went away to another part of the job. About an hour later I got back. What do you suppose those colonials were doing? Sitting in a long, solemn row, looking very wise in their flowing robes, and passing stones from hand to hand, one small piece at a time. It was the way they built the pyramids, and I suppose they figured it was good enough for a hydroplane shipway."

CONVENTION CALL!

(Continued from Page 7.)

held conference and attempted to adjust the same.

Hotels.

Headquarters of the Executive Council will be the Alamac Hotel.

List of hotels with rates will be communicated in a later circular.

Fraternally yours,

SAMUEL GOMPERS, President.
FRANK MORRISON, Secretary.
JAMES DUNCAN, First Vice-President,
JOS. F. VALENTINE, Second Vice-President,
JOHN R. ALPINE, Third Vice-President,
FRANK DUFFY, Fourth Vice-President,
WILLIAM GREEN, Fifth Vice-President,
W. D. MAHON, Sixth Vice-President,
T. A. RICKERT, Seventh Vice-President,
JACOB FISCHER, Eighth Vice-President,
DANIEL J. TOBIN, Treasurer,
Executive Council, American Federation of Labor.

Labor News

Inside electrical workers employed by the local telephone company at Boston are conferring with the company on the subject of a 44-hour week. The present work week is 48 hours.

The Kansas State Legislature has approved a law by which the State may purchase lands, develop them by construction of irrigaton projects and otherwise and sell them under long-terms contracts to actual owners.

The Seattle plan of reorganization of the American Federation of Labor along industrial rather than craft lines, with certain amendments, as reported by a special committee, was indorsed by the Central Labor Council of Tacoma.

The Tennessee Legislature has passed a cossack bill, despite opposition by organized labor. The Manufacturers' Association secured the support of the colored people for this sinister measure by claiming that it would prevent lynching.

Organized street car men employed by the Boston Elevated Railroad company have presented a new wage scale to the company. The present rates call for a maximum of 48 cents an hour with a working day from nine to eleven hours. The car men want the rate advanced and the work day reduced to eight hours. If the controversy cannot be settled it will be referred to the national war labor board, according to an agreement between the parties in interest.

The Massachusetts State Senate has ordered to a third reading the bill providing that women and minors shall work no more than forty-eight hours a week in manufacturing or mercantile establishments or more than nine hours in any day, except that in certain seasonable occupations the hours of labor in a week may amount to 52 hours, provided that the total number of hours of work in a year shall not average more than 48 hours a week.

A bill before the Washington legislature shows a new wrinkle in the campaign to stop strikes by law. The latest is that no strike shall be called until after a vote by the organizations involved is taken under the direction of the public election officials after thirty days' notice. An employer is not interfered with in his right to close down his plant for any reason or no reason, but if his employees would suspend work to enforce their demands, the employer under the terms of the proposed bill is given thirty days' notice, with public officials controlling the election before employees can quit work.

The plan of James Duncan to consolidate international unions engaged in the same industry has been endorsed by the Seattle Labor Council of which he is secretary. Under this plan all the ironworkers of America would be gathered together in one-big-union embracing the entire metal industry. Locals would be preserved as at present, but the number of internationals would be reduced to 12, as follows: amusement trades, building trades, clothing and textile trades, culinary and provision trades, marine and transport workers, metal trades, mine workers, postal and federal office employees, printing trades, railway workers, telephone and telegraph workers, and timber workers.

Home News

Recruiting of volunteers has passed the 5,000 mark, according to reports reaching the war department from recruiting stations throughout the country.

Credits of $85,000,000 to France and $25,000,000 to Italy were announced by the Treasury. The total advanced to the allies is $9,008,999,340.75, of which France has received $2,702,477,800 and Italy $1,521,500,000.

San Francisco has strong probabilities of being the meeting place of the next session of the Democratic National Committee, in the opinion of F. Ray Groves, secretary of the Democratic State Central Committee.

Officials of the recently organized world war veterans of America, with one exception, have resigned in order that the organization may be absorbed into the American Legion, now being formed by Lieutenant-Colonel Theodore Roosevelt.

Nearly three hundred delegates from thirty States attended the National Colored Congress conducted by the National Equal Rights League at Washington, D. C. Eleven persons were elected to go to Versailles in the interest of the Negro during the Peace sessions.

Declaring that the State of North Dakota is prohibited from engaging in private business under the constitution of the United States, 40 taxpayers are seeking an injunction against operation of practically the entire program of the Non-Partisan League, adopted by the State Legislature.

Hulett Merritt of Pasadena, reputed a millionaire, was sentenced by Judge Oscar Trippet of the United States District Court to serve five months in jail and pay a fine of $5000 following his conviction of hoarding sugar in violation of war food restrictions. Merritt gave notice of appeal.

Street cars, driven by internal combustion motors will be general in the United States in a comparatively short time, it was predicted by Chas. E. Sorenson, general manager of Henry Ford & Son tractor plant. The Ford Co. will demonstrate such a car on the streets of Detroit this summer, said Sorenson.

In formally advising General Pershing that 50,000 volunteers are being enlisted here to replace an equal number of men in his army who want to come home, the War Department has directed the commander in chief to return promptly for discharge selected meritorious cases as he receives these volunteer replacements.

The War Camp Community Service recently estimated that the total number of non-employed in New York was 50,000, and that the rate of increase was something like 7,000 to 10,000 a week. It also said that 20,000 officers are looking for jobs, and that of the 500 to 600 officers using the Pershing Club daily 75 per cent. of them were looking for work.

The following facts about the Chicago Municipal Water Works show what an efficient administration can accomplish. This plant is valued at nearly $60,000,000 practically all paid for out of the earnings, with rates about one-half those usual under private ownership, with the highest wages and best labor conditions of any similar plant in the country, and withal aggregating a net profit for 1918 of $3,003,200.

Domestic and Naval

The collier "Myolo" has foundered outside the Sydney heads. Four men are missing out of a crew of 15.

The special commission (German), investigating the execution of Capt. Chas. Fryatt of the British Merchant marine, decided that the sentence imposed upon him was not in violation of international law.

A new world record in shipbuilding was claimed for the Ford Eagle plant in the completion to the launching point of United States Eagle boat No. 59 in exactly ten days to the minute from the time the keel was laid.

California State Senator W. S. Scott has introduced in the Senate a resolution asking that Secretary of the Navy Daniels assign Admiral Farragut's flagship, the "Hartford," for use as a nautical training school in San Francisco Bay.

A number of American naval officers are mentioned for promotion and nomination in the Legion of Honor. Admiral Benson is promoted to receive the Grand Cross of the Legion, while Admiral Mayo and Rear-Admiral Sims and Wilson are advanced to the grade of grand officer. Rear-Admirals Gleaves, Usher, Long, Griffin, Welles, Taylor and Earle become commanders.

Officers of the naval reserve force may be taken into the regular Navy temporarily to controvert the suspension of the reserves contemplated because of the failure of Congress to appropriate the necessary funds to maintain the personnel. Announcement was made in naval circles that the officers, provided they pass the physical and technical examinations, may accept temporary commissions in the regular Navy on recommendations of their commanding officers.

On the dispersal of the British grand fleet, Vice-Admiral Sir David Beatty hauled down his flag as commander in chief. All the newspapers published articles on the historic occasion and paid tribute to Admiral Viscount Jellicoe as the organizer and leader, and to Vice-Admiral Beatty as a first-class fighter who crowded Lord Jellicoe's work. There is some discussion as to whether Sir David Beatty, now unemployed, will be offered the post of First Sea Lord.

The officials of the White Star Line have received a communication from the British Admiralty thanking them for their successful participation in supplying the needs of the government's oil burners during the war. The White Star Line carried American fuel oil in the double bottoms of the ships plying across the Atlantic and did this without cutting down the regular carrying capacity of the vessels. Nine of the company's large carriers, including the "Britannic," were sunk by the German subs.

A good deal of dissatisfaction is felt among Hollanders because the English blacklist, far from being withdrawn, now that hostilities have ceased, is still being increased by the addition of new names. Owing to certain firms being on the blacklist, the British and United States Governments prevent their ships from taking cargo in British or American ports, or bunkering in any coal station controlled by these countries. This means that about 35 vessels of an aggregate tonnage of 102,000 tons are kept idle, when the world needs shipping so badly.

News from Abroad

Italian marines have been landed at Adalia, in Asia Minor, to restore order, following an outbreak of disorders on the part of convicts and army deserters.

Royal Dutch Shell Oil interests have acquired control of the Mexican Eagle Oil Company, Limited, a Lord Cowdray property, with oil concessions in five states in Mexico.

A news agency dispatch from Bombay reported extensive riots in Delhi on March 31. Police and soldiers were called out and fired on the rioters. There were some casualties.

The commission on constitution of the German National Assembly has adopted a clause stipulating that there shall be no state church, a dispatch from Weimar says. Sunday is maintained as a legal holiday.

An Exchange Telegraph dispatch from Rome reported that Hungarian Bolsheviki have declared war on Serbia, which is demanding allied aid. Martial law was said to have been proclaimed throughout Serbia.

A great agitation has broken out in Winnipeg and other Canadian cities against a threatened invasion of Mennonites from the United States. It is stated that more than a million German settlers are preparing to come into Canada. It is said that public opinion in Dakota is forcing all slackers out.

British boxing promoters are attempting to obtain for London the heavy-weight championship fight for which Jess Willard and Jack Dempsey have been matched for July. Willard and Dempsey have been advised that a purse of 20,000 pounds will be split as they desire if the bout is held there.

Discontent among retail dealers in grain in Bombay, India, has resulted in rioting there, Reuter's correspondent at Bombay reports. Two thousand dealers attacked the office of the assistant food controller and several of them assaulted that official. The police are holding an inquiry. No arrests have been made.

Reports of the recent Finnish elections show a complete defeat of the monarchist element and are said to mean that the existing constitution is doomed. On the basis of returns as printed in the Swedish press, the membership of the new Landtag will be as follows: Socialists, 80; agrarians, 42; Swedes, 22; coalition, 22; Progressive Finns, 26.

American pajamas are now being worn as outer garments by tens of thousands of destitute men and boys in the Balkans. The American Red Cross has sent over 1,000,00 suits to Serbia, Montenegro and Greece. The shortage of clothing throughout this region is so great that the poor are glad to get any form of covering. Bath robes are being worn by the women who find it impossible to get cloaks.

Attention of American furniture manufacturers is called to the possibilities of increased trade with the West Coast countries of South America in a report issued by the Bureau of Foreign and Domestic Commerce of the Department of Commerce. More than a million dollars' worth of furniture is imported annually by Chile, Peru, Ecuador and Bolivia, the report says, and there is to be a large increase as soon as normal conditions are restored as many of the inhabitants have accumulated fortunes during the war.

With the Wits

Casey (on retiring)—"Whativer ye do, Norah, dont let me overslape in the mornin'. If ye don't wake yourself, wake me, anyhow."

Traffic Cop—Come on! What's the matter with you?

Truck Driver—I'm well, thanks, but my engine's dead.—Buffalo Express.

"Sue, who was here with you last night?"

"Only Myrtle, father."

"Well, tell Myrtle that she left her pipe on the piano."

Orpheus of old could make a tree or a stone move with his music; but there are piano players to-day who have made whole families move.—Boston Transcript.

Flatbush—Did you ever try to get your wife to try to count ten before she spoke?

Bensonhurst—Oh, yes. But I think it is an impossibility.—Yonkers Statesman.

"I tell my wife she's perfect, but she evidently doesn't agree with me." "What makes you think that?" "This bill for false hair and cosmetics. She's always adding improvements."—Kansas City Journal.

"Now if you could just hit it right by composing the words for a popular song," urged his friend, "you might get independently rich." "I know it," he groaned, "but, alas, I am educated."—New Orleans Picayune.

"See here, sir, we can't get any of your waiters to take our orders."

"Beg pardon, sir, but in view of the present shortage of help our waiters no longer take orders. They receive requests."—New York Evening Post.

Fond Parent—Did you hear my daughter sing?

Returned Soldier—Yes.

Fond Parent—What did you think of her range?

Returned Soldier—I should say she ought to kill at three miles—Judge.

Motorist (blocked by load of hay)—I say, there, pull out and let me by. You seemed in a hurry to let that other fellow's carriage get past.

Farmer—That's 'cause his horse was eatin' my hay. There haint no danger o' yew eatin' it, I reckon.—Brooklyn Eagle.

"And we can sell you this car on easy payments," said the agent, pleasantly.

"My friend," replied the prospect, "the expression 'easy payments' belongs to the same category with that other well-known fib, 'painless dentistry.'"—New York Globe.

An Invitation

We invite deposits from every one—rich, poor, old and young. We recognize no classes, but treat large and small depositors with the same courtesy and consideration.

HUMBOLDT SAVINGS BANK

733 MARKET STREET, Near Fourth
SAN FRANCISCO

Taylor's Nautical Academy

Established 1888

Consular Building, Corner Washington and Battery Streets, Opposite New Custom House, San Francisco, Cal.

THIS OLD AND NOTEWORTHY SCHOOL is under the direct and personal supervision of CAPTAIN HENRY TAYLOR and equipped with all modern appliances to illustrate and teach any branch of Navigation.

The class of teachers of Navigation in the past have been those having simply a knowledge of Navigation, and Navigation only. Conditions have changed, and the American seamen demand a man as a teacher with higher attainments than one who has only the limited ability of a seaman. The Principal of this School, keeping this always in view, studied several years the Maritime Law, and is now, in addition to being a thorough teacher of Navigation and its kindred subjects, a regularly admitted Member of the Bar.

There is no standard of education required of a pupil entering the School, for no matter how ignorant the seaman may be, even in the rudiments of common education, Captain Henry Taylor will teach and raise him from the depths of ignorance to the height of the average well-informed man, and in a comparatively short interval of time.

HORACE R. TAYLOR HENRY TAYLOR

THOUGHTS ON ECONOMIC FREEDOM

A Sociologist on "Radical Tendencies in the Industrial World"

"Radical Tendencies in the Industrial World" was the title of an exceptionally interesting and instructive address delivered by Mr. Robert Hunter before the California State Conference on Social Agencies, held at San Jose, during the past week:

Mr. Hunter is the author of "Tenement Conditions" in Chicago, 1901; "Poverty," 1904; "Socialists at Work," 1908; "Violence and the Labor Movement," 1914; "Labor in Politics," 1915. He is at present connected with the University of California as Lecturer in Political Economy.

His address follows in full:

As we look out over the world to-day perhaps the most important single thing that strikes one is the varying degrees of power now exercised by labor. In America labor enjoys all the blessings of political freedom but in industry it exercises very little power. The Unions are still fighting for elementary rights and even for recognition while reformers are still pleading for social reforms that were granted to the workers of England and Germany decades before the great war. Strangely enough we still have in America industrial autocracy despite our advanced political democracy. In England we now see developing brotherhood in industry. Capital and labor are forming a kind of industrial parliament in which they can discuss their affairs. Organization is to be made universal, and plans are already agreed upon for re-organizing radically the economic life of Great Britain. Labor and capital are planning to keep in constant touch with each other and to work hand in hand if possible. Although as yet these plans exist only on paper, certain important social and economic reforms have already been recommended to the Government by this Soviet of Capital and Labor. The English, after their old manner, may avoid revolution by compromise. In Germany we see now not only political democracy but also in a large measure, labor dominant. Although Labor rules, it is seeking earnestly to grant to capital a square deal. It is refusing to repudiate debts or to confiscate property. It plans eventually to remove the capitalists from industry, but this will be done—if the present government remains in power—gradually and without violence or injustice. In Russia, Hungary and Bavaria we see a very different situation. Here labor is dominant and enraged. It is full of hatred and it is now oppressing the capitalists in much the same manner that the capitalists in those countries formerly oppressed labor. The workers are not granting to capitalists even the political rights granted to beggars in a democracy. Capitalists cannot vote. They are not allowed freedom of speech or of the press. Debts are repudiated, rents are no more and interest is abolished. Even the right of inheritance is done away. The Soviets, or labor unions, are now supreme. We have then introduced in a large part of South-eastern and Eastern Europe proletarian domination with the workers practicing the same cruelties upon their former masters that their former masters once practiced upon them. This is Bolshevism and all over Europe at the moment the trend is strong toward Bolshevism.

Within a few months we have seen the Romanoffs, Hapsburgs and Hohenzollerns overthrown by democrats and Socialists and now the democrats and Socialists are being overthrown or seriously threatened by the Bolshevists. Both the revolutions and the convulsions which are following them are chiefly due to the fact that in all the countries which have suffered military defeat the entire economic system has collapsed. What we call Capitalism has had to bear during the war a strain far beyond its power and it was well on the way toward ruin in Russia in January 1917, and in Germany in November 1918. The life of the people had then become so unbearable that revolution was a necessity; but instead of improving economic conditions it has made them, if possible, even worse. Now the questions arise, is there any possibility of any government maintaining order in a country which has suffered such a complete economic collapse that it cannot revive its industries? Would Russia have become Bolshevist had Kerensky been able to give food and employment to the masses? Will lack of food and employment drive the German masses into the ranks of the Spartacans and eventually cause the overthrow of the Majority Socialists? Undoubtedly the economic conditions in Germany, Serbia, Hungary, Bohemia, Roumania and Austria are in a deplorable state and they are growing worse day by day. Millions are unemployed and prices are so high that even those at work cannot live on their wages. The owners of industry will not run their factories without some prospect of profit; and capital, wages and raw materials are now too high and the market too uncertain for them to venture on an increase of production. The workers refuse to work because prices are mounting ever upward and their wages are too little to enable them to live. And so we see lockouts and strikes everywhere and these send prices still higher. Moreover, the government must have money and it prints more paper—and this, too, sends prices higher. Eventually only the very rich can afford to buy the necessaries of life—and then comes the Bolshevist outcry, "Down with the Bourgeoisie!" Thereafter it is a war to the death between those who have and those who have not. And those who have are few and those who have not are many.

Charles H. Crasty tells us that all of the allied experts who have been sent into the defeated countries report to the Peace Conference that economic conditions are desperately bad and that everywhere for the following reasons the trend is toward Bolshevism: first, lack of food; second, unemployment due to the shortage of raw materials; third, delay in making peace; fourth, definiteness of the Spartacide plan; fifth, the despair of the people and their broken discipline; sixth, new ideals, with Lenine compared to the Messiah, as opposed to (a) allied imperialism, and (b) the League of Nations which lacks concreteness and directness of appeal. Oswald Garrison Villard, who recently visited Germany, reports that there will be absolutely no food there in three months. "The officials of the Food Bureau in Bavaria showed me," he writes, "the ration for twenty-four hours. It would not keep a chicken alive." He speaks of the wan, sickly faces that one sees everywhere and says that when he went to the early market there was literally nothing to be found there "save roots which one would hardly feed to animals in America. It is the underpaid official, professional and clerical classes with fixed incomes that suffer most terribly. They are so weak, many of them, as to be practically useless." In another place he refers to meeting long processions of workmen—"pale and gaunt and lean, so over-worked, starved and hungry looking as to move any heart." Villard also reports that he talked with a working man who was earning regularly one hundred marks a week, but as he had been unable to buy any clothes since the war began, he was literally in rags. His two children are dead and his wife is dying from consumption. When the men regularly at work cannot make ends meet, what must be the conditions of life for the poorer paid, the casual workers and the millions of unemployed?

And few of us in America seem to realize how many of these men are armed. Within a few months millions of soldiers have been demobilized, but not in the American fashion. A vast number carried their guns away with them, and thousands have the machine guns which they were using in the war. Many also made it a point to carry away with them as much ammunition as they could lay their hands on. All over Germany, Austria, Hungary, Russia and other countries, where revolutionary governments have been formed, millions of guns and no one knows how much ammunition are hidden away. Not a single revolutionary government has been strong enough to disarm the masses, although they have plead with the soldiers to give up their arms voluntarily, and some have done so. Not only men of wealth and captains of industry but the governments also must deal then with an ever increasing mass of the hungry and the unemployed, many of whom are armed.

Conditions are made worse by the fact that Capital is timid and is now afraid to set the wheels going again. It lacks confidence and it will not go ahead unless it can see its way clear; and for Capital in all the countries of Middle and Eastern Europe nothing is certain but uncertainty. Men of property are anxiously waiting to see which element or class is to be victorious. The assurances of the Socialists now in control of Germany that debts will not be repudiated or property confiscated bring no confidence because to-morrow the Spartacans may be in control. Even if business men could

now borrow and if banks could lend money they would probably not do so when they fear that within a few weeks everything they possess may be confiscated. If there was any possibility of the capitalists cashing in and running away they would undoubtedly do so, but no one will buy their property because of the uncertainty of the future. Added to the other difficulties are the present huge debts, and the prospect of more to come as soon as the peace terms are settled. And this means that although the capitalists see the necessity of getting their industries going again they are disheartened because their future incomes must be so heavily taxed as to reduce them to a condition little above that of common laborers. With the capitalists paralyzed with fear the dynamo of modern society is wrecked.

In those industries which are still being carried on the high cost of living is playing havoc. Strike after strike breaks out. Bank clerks, office men and even government employees cannot live on their salaries and they too are embittered, restless and riotous. Labor generally is so overburdened that it cannot lift the weight placed upon its back. Indeed, that back was well-nigh broken by the burdens of the war. For over four years the toilers were working over-time. Day and night they have labored feverishly to produce engines of destruction and they are now weary, hungry, nervous and sick. They ought all to be sent off somewhere for a long holiday and given a complete rest with plenty of food. Their hearts ought to be made light again and some hope gotten into their lives. But this is obviously impossible. After years of incredible labor they are now not only face to face with famine but in order to make the machine go at all they must produce profits again; because only profits will draw forth the energy, the ability and the management which have heretofore been contributed in industry by the capitalists.

Capitalism Is International.

The international situation is also blocking the game. Capitalism is international and for the moment there is no such thing as international trade, international banking, or even adequate international communication between the defeated and the victorious countries. Raw materials cannot be gotten in; finished products cannot be gotten out. The situation then borders upon the impossible.

Another element affects the situation. In the past the Teutons and the Slavs have been suppressed, drilled and disciplined. They have lived under extremely arrogant rulers, masters and officers, and they have gone through a terrible war where the discipline has been of the harshest possible description. Now suddenly all restraint is taken from them, and, like men out of prison, they feel there is a chance of doing pretty much as they please. It is a tragic spectacle, these great countries, with starvation and death all about, with men hungry and unemployed roaming the streets in masses, with suspicion and distrust easily aroused, and at bottom of all a tremendous overwhelming passion for freedom in all its possible manifestations. To the criminals these days are an opportunity to rob the weak and defenseless; but to the idealists these precious hours present an opportunity that may not come again for generations. It is an opportunity, they think, to carry out some of their visions, and among these are the Republic and the Socialist Commonwealth. They want now to lay the foundations of the new society which will assure to every man, woman and child a decent livelihood. But the idealists are at war among themselves; and due to widespread and increasing misery the extremists are overpowering the moderates. Constituent assemblies, universal suffrage, elections, parliaments, republics and democracy make no appeal to hungry men who demand food, a division of all available wealth and a workers' government which shall decree that hereafter he who does not work shall not eat.

When Masses Are Starving.

While such demands seem absurd to comfortable Americans, everyone must see how natural, how inevitable such a theory of life becomes in the midst of general starvation. When everyone has work and in some degree the comforts of life, the man who does not work appears to be of little importance, but when masses are starving the man who lives in idleness and plenty arouses, naturally, among them bitterness and rage. This is not simply the after-war psychology; it is the psychology that would exist in us if we were facing famine. Men who have for over four years been fighting desperately in the trenches return as poverty-stricken heroes to find their beloved ones literally starving to death. They have fought for their country, including those who have grown rich out of the war, and their first thought when they see the misery in their homes is to tear to pieces those who launched or profited in the war that has brought them untold misery. Their state of mind is about like this: We have been at the front and fought battles never before equaled in the history of the world; we have fought to protect you and your property, and now that we are home again do you expect us to starve to death while you live like swine at the trough? And with a rage that is indescribable they are turning upon everyone who has food and clothing. The soldiers of Europe have not read Marx, nor have they suddenly become constructive Socialists. Some have become destructivists and divisionists; others perhaps unconscious, instinctive Socialists, but they would not have become either the one or the other in such vast numbers if food were not lacking. But as a state bordering on famine exists they declare that nothing is too good for those who have fought and labored and they are now taking by force food and other property.

What's In a Name?

We may call this state of mind anything we please, Socialism, Anarchism, or Bolshevism. That is of little importance—the next stage, if industry remains paralyzed, may be cannibalism; but the vital matter is that this state of mind exists and that it will not change so long as economic conditions remain what they are. The most hopeless thing about Middle and Eastern Europe is this, that the misery of the masses is increasing in intensity every day. Even in Russia where the Bolshevists have attempted to socialize everything millions are dying of starvation. Typhus has broken out and we may see running all through Middle and Eastern Europe three diseases that are more menacing even than Bolshevism itself. They are Typhus, Scurvy and Tuberculosis. And like Bolshevism they are due largely to starvation and they can only be kept out of Western Europe by exactly the same methods that must be used to keep out Bolshevism. There must be plenty of food, improved sanitary conditions, decent housing, regular employment, good wages, and a lower cost of living. Senatorial investigations, editorial castigations and popular hysteria will not keep out these diseases, nor will they keep out Bolshevism so long as economic conditions produce misery and despair among the masses.

As misery and despair increase we see now in Hungary and Bavaria and approaching in Germany, Roumania, Austria, Bohemia and Serbia the same political and economic convulsions which occurred previously in Russia. At first—for eight months—the Russian masses were fairly moderate in their demands and were content with the government of the Constitutional Democrats. But as their misery increased they turned from the Constitutional Democrats to the Socialists, and as their misery still further increased they turned from the Socialists to the Bolshevists. Hungary has also passed through the same evolution and every day brings Germany nearer to the abyss. At first we had Prince Maximillian and then the Majority Socialists. Six months ago the Spartacans were few and in fact existed only in Berlin, but although they have been suppressed again and again they are stronger now in Berlin than ever and they have spread all over Germany. In a hundred different places they are now participating in periodical uprisings. To-day there is victory for the Government, but tomorrow there may be defeat. Inevitably as economic conditions grow worse the more and more extreme elements will prevail.

The solution offered by the Bolshevists makes a tremendous appeal to the masses of Europe. In the first place the Bolshevists forcibly remove all obstacles which stand in the way of a redistribution of wealth. They disarm those who possess any property whatever and tell the masses to go ahead and take what bread, clothes and other supplies they can find. They open the large houses and tell the houseless and the homeless to go in and take a pleasant room and a bath. Their government repudiates all debts and wipes the slate clean. It says to the landlords that no more rents will be paid. It tells the capitalists to open the factories or be shot, and decrees that they must work on the pay of common laborers and give up all thought of profits. In fact neither now nor in the future are there to be any more profits for capital. The State or the Soviet is to own the property and the returns from the sale of whatever is produced are to be divided among those who have produced them. They arm the poor and disarm the rich and thus overcome all possible opposition to the new regime. This is theoretically and to a certain degree actually the position of the Bolshevists and the program appeals so strongly to the masses that we may soon see these ideas prevail in every country east of the Rhine. Of course, everyone not actually hungry or mentally unbalanced knows that this is not a permanent solution of the problems of society. Soon there will be no more surplus wealth for division, and when everyone is reduced to a common level there will then arise a death-struggle between the weak and the strong, the armed and the unarmed, the organized and the unorganized. Although dividing up does put off the day of reckoning, unless Bolshevism can conquer new reservoirs of wealth in the Ukraine, in Hungary and in Germany it will be forced to increase the production of wealth in Russia or it will eventually die out. Even a Bolshevist government is not immune from revolution when its sole resource is paper money.

What the Militarists Might Do.

Bolshevism will in time destroy itself unless our militarists do for us what the militarists of Germany and Russia did for their countries. Not content with having produced the ruin that has given birth to Bolshevism, the militarists now suggest policing Germany and overpowering Hungary and Russia; but as they are not economists perhaps they do not realize that a new world war to destroy Bolshevism might eventually reduce every country west of the Rhine to the same bankrupt state that originally produced Bolshevism in Russia and is now producing it in Germany and elsewhere. This would be like fighting fire by burning down everything before it. A war against Bolshevism might be a long one because the system devised by the Bolshevists is a difficult one to destroy. Every county Soviet is a little government in itself and, therefore, every county in Eastern Europe might have to be subdued and then garrisoned before the seeds of this new menace could be destroyed. Moreover, the opposition at home to any such policy is bound to grow more and more serious. Practically every labor organization in France, Italy and England has already protested vigorously against intervention or any interference with the Bolshevist republics; and it is almost certain that in case an attempt is made to draft an army to fight Bolshevism there will be serious riots. General strikes will certainly be declared in all the victorious countries, except America. Lenine fully realizes this, in fact, he seems to know a great deal more about the feeling of the working classes in the allied countries than do the statesmen who now represent those countries in Paris. And although Lenine is a fanatic, he is also at the moment the master-mind in Europe. He realizes that as war was the chief cause of the political revolutions, so starvation and unemployment are the chief causes of Bolshevism. And he knows that if Europe remains for years in a state of war the entire continent will eventually go into bankruptcy and suffer such a complete economic collapse that Bolshevism will be victorious everywhere. Nor should it be overlooked that Lenine is now pursuing in all the allied countries exactly the same policy formerly pursued by the Kaiser and his colleagues, and partly as a result of Bolshevist propaganda we may soon see uprisings in India, Egypt, Ireland and perhaps in Spain, Italy, France, Norway and Switzerland. Certain classes in all of these countries might attempt a revolution to help Bolshevism where they would not lift a hand to aid German militarism. To continue in a state of war to fight Bolshevism is out of the question unless the leaders of Western Europe are seeking the quickest and surest path to suicide.

Bungling the Russian Situation.

Unhappily nobody at the Peace Conference except President Wilson seems to understand either the permanent or the temporary causes of these revolutions. In any case the measures taken up to the present by the Peace Conference have only added tinder to the conflagrations now famine all over Europe. From the beginning the allies have bungled the Russian situation and now they are driving Russia, Germany, Hungary and Austria together. To a large extent it was the policy of the Peace Table that brought Bolshevism into Hungary and if Bolshevism is finally victorious in Germany and later in France and Italy it will be very largely due to the fact that the men at the Peace Table do not understand what they are dealing with and haven't the slightest conception of either the permanent or the temporary causes of the social plague now raging through Middle and Eastern Europe. On the day the Armistice was signed President Wilson put his finger on the root of the evil, but apparently his voice does not prevail. His colleagues seem to think him an impractical visionary, an idealist; and up to the present they have refused to heed his warnings. But I gather from what he has said here and abroad that there is only one possible way to fight Bolshevism and that is to make our own house clean. It must be fought by creating wholesome centers where the germs will not enter. Just as scientists fight the "Flu" or the Black Death by cleanliness, sanitation, hygiene, good food, freedom from worry and all those things which produce health, so nations can effectively fight Bolshevism by putting themselves in a state of social health. They must lay up reserves in food, clothing and the necessaries of life. They must carry on production to the limit and lower the cost of living. They must shorten hours and increase wages. They must deal frankly and justly with labor and realize before it is too late that the day of industrial autocracy is past. The safety of the future lies in democracy—political, economic and social. Moreover, labor must be prized and respected as the most essential, most worthy and most precious element in industry. If the fear of Bolshevism should by any chance be the beginning of wisdom it will have contributed at least one great service to the world.

The windjammer may again be in demand to supply European countries with lumber for reconstruction work as a result of the recent war. Mill operators are receiving many orders, but tonnage cannot be secured. Deals are now pending to arrange charters for lumber carriers to Italy. The fact that charter rates from the Pacific are lower than from the Gulf States indicates that a large portion of shipments made to Europe will be from Pacific Coast points. The demand for lumber carriers of about 1,500,000 feet capacity with the supply depleted indicates that the sailing craft will again be utilized.

WEEKLY NEWS LETTER

Contributed by American Federation of Labor

Defends Teachers' Unions.

In an editorial defending the right of teachers to affiliate with the trade union movement, the Houston Post says:

"One reason why the teachers of the United States have endured the hardships of the war period with no compensating increase of pay is that they were not organized, and another reason is that the great majority of them are women.

"We believe there is no room to doubt that the teaching standards of Houston and other features of the system will be more effectually raised through the teachers themselves unitedly and out of a sense of professional pride, than has been the case heretofore.

"And there will be many improvements when the teaching body can speak collectively and advise collectively, for then the rule of repression will necessarily give way and a spirit of genuine democracy be substituted for it.

"Surely if the public school system is entitled to be called the cradle of democracy, there ought to be at least enough of democracy in the operating force to be heard upon every vital issue pertaining either to the well being of the teaching force or the training of the children."

Won't Meet Unionists.

"The very idea!" exclaims Lindley M. Garrison, receiver of the Brooklyn Rapid Transit Company, when asked to receive a committee to discuss working conditions of employees who have organized a Street Car Men's Union.

The present age is unknown to Mr. Garrison, who declares that the union is "attempting to create differences between the company and its employees."

The company has been notoriously antagonistic to trade unionism and the receiver, while supposed to be an agent of the court, would seem to be carrying out this policy.

The company's antagonism to organized labor resulted in a wreck last November that caused the death of 98 passengers. The company refused to obey an order by the National War Labor Board that victimized unionists should be reinstated. The men suspended work and the wreck was the result of a green employe attempting to operate a train.

Mr. Burleson Cornered.

"Postmaster General Burleson is not helping his grand public-ownership enterprise by making statements as to his operation of telegraphs and telephones which are instantly challenged by men familiar with the facts," says the New York World.

"For example, he says that the recent increase in rates was made necessary by higher wages and that the added revenue will hardly cover the extra expense; but officials of the employes' organization deny that there has been any actual increase in wages, holding that the extraordinary outlays now cited are mostly due to costly and wasteful methods introduced since the lines passed under the control of government.

"As a further illustration, in defending the 20 per cent. increase in rates on these grounds, Mr. Burleson says that it would have been unavoidable and probably greater if private management of the lines had been continued. In reply to this we have the statement of President Mackay of the Postal company in which he guarantees restoration and maintenance of the old rates when public control of his lines shall have been relinquished."

Will Invoke Referendum.

The Executive Board of the Ohio State Federation of Labor has voted to invoke the referendum on the Miller bill, which was passed by the General Assembly over the veto of Governor Cox. The bill requires Senate confirmation of appointments on the State Industrial Commission, and the unionists declare that this is a "subtle attack an the administration of the Workmen's Compensation Law and an attempt to throw the activities of that department into the political spoils system."

No Sign of Cheaper Meat.

The American Meat Packers' Association has issued a statement in which it declares that lower prices for meat may not be expected until the war-stricken countries of Europe are enabled to resume their quota of production and that "high prices will continue for a long time."

It is stated that each day that brings final peace nearer means a greater call on this country for meat and that low meat prices must wait until European production is in good swing again.

Indorse Seamen's Law.

The California Legislature has ignored the frantic appeals of ship owners and editors that the Seamen's law be repealed, by passing a resolution that the merchant marine of the United States should provide for rights of the seamen, together with working conditions, "equal to and not lower" than those established by the La Follette Seamen's law.

This action by the Legislature is especially distressing to Captain Robert Dollar of San Francisco, who has furnished much of the ammunition against the law and who now finds his home State against him.

Against Immigration.

Legislation that would stop immigration for two years was demanded by the Louisiana State Federation of Labor at its annual convention. Other demands were: Government ownership, operation or regulation in the interest of the public of railroads and other public or semi-public utilities; government ownership of wharves and docks; an investigation of housing conditions and reforms of school conditions and working hours of women employees.

The convention declared that "the freedom of the press and the freedom of speech and assemblage is the only open

World's Workers

Over 70,000 workers have already joined the recently established Greek Federation of Labor. These workers come from twenty-five different industries and are grouped into 200 unions. The union is a purely industrial organization, and in its preamble recognizes the class struggle as its basic principle. It has already affiliated with the Trade Union International, and has pledged itself to work for the solidarity of the working classes of Europe.

The South Auckland Enginedrivers, Winders, Motor and Firemen's Union award provides that in the case of men working underground the hours of work in day and afternoon shifts shall be 46 hours weekly, night shifts 47 hours, all other, inclusive of crib time, 48 hours per week. Employes on pumps work similarly, while electrical attendants' shifts are limited to six hours in wet places with 4d. per day oiler money. The wages have been generally increased, the minimum being fixed as follows: Winders, 12/6 per shift; winchmen, 11/6; first-class stationary enginedrivers, 12/-; firemen, 9/9; leading firemen, 10/6; locomotive drivers, 12/-; locomotive firemen, 10/6; engine greasers, 9/9, gas engine drivers, 11/6; electric motor drivers, 10/3; attendants at electric motor on sinking or suspended pumps, 11/6.

The Labor Gazette, issued by the Dominion government, prints interesting Canadian strike statistics for the year 1918. There were 191 strikes reported and of these 113, or 57.6 per cent., were won by the workers. But 41 strikes, or 20.9 per cent., were won by the employers, and 10.7 per cent. ended in compromise and the same percentage had an indefinite ending. The value of direct negotiation between employer and employed is shown by the statement that 102 strikes, or 52 per cent., were settled by this method. Conciliation and mediation were successful in 34 strikes, or 17 per cent., while 21 cases, or about 10 per cent., were settled by arbitration. Only four disputes were settled by boards of conciliation under the Industrial Disputes Investigation Act. This act is known as the Lemieux Act.

As a result of a conference held recently between Mr. W. T. Young (general secretary of the New Zealand Seamen's Union), Mr. Clarke (secretary of the Dunedin branch) and the management of the Union Steam Ship Company, the company has agreed to take steps to alter and improve the accommodation provided for seamen on about seventeen additional vessels. The company also formally agreed to incorporate the following clause in seamen's articles at present in existence and in all new articles: "Notwithstanding anything to the contrary it is hereby agreed that any member of the New Zealand Seamen's Union signing these articles, and being invalided on shore at any place in New Zealand with illness or accident contracted in the service of the ship at any time after joining the vessel, shall be granted the benefit of Section 6 of the Shipping and Seamen Amendment Act, 1911, and this shall be allowed irrespective of whether he is invalided on shore at the port where he signed articles or not, and this article of agreement shall be read and construed accordingly."

Pacific Coast Marine.

It is reported that the idle wooden ships built in Oregon will be laid up in Youngs Bay, near Astoria.

The "Wing and Wing," a tank barge owned by the Union Oil Company, has been purchased by Charlie McCarthy.

The Shipping Board has sold the wooden steamers "Thala," "Airline" and "Ashburn" to the Nacirema Steamship Company.

The loss of the Olson Brothers' bark "Albert" will result in an appeal from shipping men of this port for better protection for vessels plying on the Coast.

The Ames Shipbuilding and Drydock Company will deliver the 8,800-ton steel cargo carrier "West Irmo" to the United States Shipping Board May 1.

The gasoline auxiliary schooner "Ozmo" was sold by G. W. McNear to the Northern Commecial Company for $100,000. She will be used in the Northern trade.

Los Angeles will be taken off the list of ports made by the steamer "Rose City" when she returns to her run May 1. She will operate only between San Francisco, Astoria and Portland.

Making her first trip on May 1, the San Francisco and Portland Steamship Company's steamer "Rose City" will go into commission after having been laid up since December 27 under going extensive overhauling.

Residents of Santa Barbara have sent a communication to Walter Scammell & Co., agents for the White Flyer Line, requesting that the White Flyer liner "Humboldt" stop regularly at Santa Barbara on her San Francisco-Los Angeles run.

The freighter "Kiyo Maru" is expected from South America and West Coast ports on May 16 and will sail for Japan and Oriental ports on the following day. The "Kiyo" is expected to bring a number of first-class cabin passengers to San Francisco.

The 8,800-ton steel steamers "West Hargrave" and "West Cherow" were assigned by the Shipping Board to the Pacific Steamship Company for May loading of flour at Portland, making a total of twenty-five vessels so far assigned to the Pacific Steamship Company.

San Diego and San Francisco are to have United States Navy radio compass stations. These stations are being established to assist inbound naval and commercial craft to correctly test their compasses by information flashed by radio and by direction indicators.

Provided the recommendation of the House naval committee which recently visited Portland is given approval by Edward N. Hurley, chairman of the U. S. Shipping Board, Portland shipyards will be able to take on contracts for the construction of steel ships for private accounts.

The British steamer "War Convoy," 8800 tons, launched in December at Vancouver, B. C., by the British Munitions Board, has been sold to the Williams Shipping Company of New York, through a Seattle agent, for $1,500,000. This ship will load in Seattle and Vancouver for a regular service to France and England.

The port of Coos Bay Commissioners are planning a number of improvements on channels in inlets of the bay. Shoals have appeared in many instances and freighting launch owners complain they are hindered greatly making prompt deliveries by being obliged to await high tides before negotiating some of the waterways.

Seattle Federal officers received a cable from Consul Thomas Sammons at Shanghai, advising shipping interests that the Hamburg-American liners interned at Hankow, China, are up for sale. It is understood that three of these vessels were turned over to the American Government. Northwestern shipping interests are interested in the proposed sale of the ships.

The last of the Coast Shipbuilding Company's government contracts was completed, so far as the hulls are concerned, by the launching of the wooden steamer "Boynton." The yard, which one time employed 1,200 men, will reduce its force to 30 or 40 until it is able to establish its plans after the government has made an accounting for the work ordered canceled.

Although not definitely decided, the outlook is favorable that the contracts for twelve steel 7500-ton steamers contracted for by the Government but under suspension since January will be restored to the Todd Drydock and Construction Corporaton yard at Tacoma. It is understood that if the contracts are restored there probably will be a cut in the original contract price costs.

There is but little tonnage in sight for the lower Yukon districts this year, according to survey reports received from that section by the principal steamship lines. About 1,000 tons of cargo for delivery on the lower Yukon via St. Michael is all that is offering so far. At the same time last year the steamship concerns were lining up to move 15.000 or 20,000 tons, though that included a lot of steel rails for the Alaska government road.

From present indications, a line of big steamers will soon be operating between Puget Sound and the west coast of South America, taking the place of the smaller craft which during the past few years engaged in that trade. This requires an 8800-ton craft which is now in the service of the Government on the Atlantic coast, will be released in June and will come to Puget Sound to load for the west coast in the service of the South American Pacific line.

Two new cargo steamers will be ready for the Singapore-San Francisco service of the Toyo Kisen Kaisha by May, according to an announcement by the company. They are the "Choyo Maru" and "Koyo Maru," which have recently been launched at the yards of the Asano Shipbuilding Company, Japan. Each is of 9800 deadweight tons, twin screws and adapted for long-distance service. The new freighter "Buyo Maru" is expected at San Francisco soon and will be dispatched to Japan in May.

Five of the fifteen wooden ships sold in New York by the Shipping Board were constructed by the Supple-Balin Company in Portland. Fred A. Ballin, who designed and superintended construction of the 4,500-ton wooden steamers with steel topsides, stated that they were constructed at a cost of $630,000 each, and the sale price of $650,000 shows the government made a profit of $20,000 each. The five vessels are the "Thala," "Dalana," "Aairlie," "Birchleaf" and "Ashburn." Several of the locally built Ballin vessels are under charter to operating firms.

The owners and operators of sailing ships have announced that the new rule of the Harbor Board, which demands that not less than a daily average of 500 tons of merchandise must be handled on or off an offshore vessel lying at a pier, works a hardship on them. They say that some of the vessels carry but little more than 500 tons total and some less. They cannot, therefore, comply with the rule which is now in force. The matter will be taken up with the commissioners and a request will be made that in the case of the small vessel and sailing ship the rule be qualified.

It is rumored that Thomas Crowley is making arrangements to dispose of his three sailing vessels in the near future. The owner of the "John and Winthrop," "Crowley" and "Olympic" said that he had no announcement to make, but that if he did try to dispose of the fleet he scarcely expects to sell to Captains E. L. Whitney and L. A. Scott of Mobile, who are now here looking after the interests of their ships operating to Pacific Coast ports. Crowley added that it was his experience that it is easier to locate buyers of ocean sailing craft far from the salt water.

Suggestion has been made by Dorsey Smith, Portland tourist agent, that the new freight steamers to be placed in operation between Portland and the Orient be fitted with limited passenger accommodations. He believes that many Oregon people would take advantage of the opportunity to travel on the big freighters like the "West Munham," and he believes that all the rooms that can be furnished would be filled on each trip. The Pacific Steamship Company has announced that when additional ships are assigned by the Shipping Board a monthly service will be operated out of Portland.

Through its president, Harry J. Hart, the Maverick Steamship Company has filed suit against the West India Sugar and Molasses Company for about $60,000, which is the balance due in payment of the steamer "Maverick." A. W. Geiscke, president of the sugar company, is also vice-president of the Equitable Trust Company of Baltimore, where the suit has been filed, and vice-president of the Cosden Oil Company of Oklahoma. This suit is urged also by Assistant United States Attorney John W. Preston, the Government having claims against the "Maverick" for funds due the Alien Enemy Custodian to the amount of about $20,000. This money was held up pending the Hindoo conspiracy case.

Trade conditions between San Francisco and China now warrant more direct communication and the steamship "Nanking" of the China Mail line is to be put on a new schedule direct to Japan and omitting Honolulu to effect a time saving, it was announced by H. N. Thomas, general passenger agent of the company. This change will permit the "Nanking" to make the run to Yokohama in fifteen days, to Shanghai in twenty days, to Hongkong in twenty-four days. The "Nanking" will continue her present schedule for the trip commencing May 10, and the first trip under the new schedule will commence July 17. A number of passengers who are already scheduled make it impossible to make the change earlier. The "China" will continue to stop at Honolulu, as she is a coal burner and the stop is necessary. The "Nanking," an oil burner, can run straight through.

F. R. WALL, who was for many years an officer in the United States Navy, is now practicing marine law in San Francisco. He gives claims of all seafarers careful attention. 324 Merchants Exchange Bldg., 3rd Floor, California St., nr. Montgomery. Phone, Sutter 5807 (Adv.)

WEDNESDAY, APRIL 30. 1919.

WORLD'S SEAFARERS CONFER.

Detailed and authentic news regarding the recent International Seafarers' Conference at London has finally come to hand. Patrick Flynn, one of the delegates from the organized seamen of America, has returned to America; in fact he is right here in San Francisco. The JOURNAL is pleased to announce, therefore, that beginning with next issue a series of articles giving full and complete information upon the proceedings of the first world convention of Seamen will be published in these columns.

The Seafarers' Conference dealt with several matters of the greatest importance. However, to the organized seamen of America the attitude of the conference toward the American Seamen's Act is, without doubt, of the most vital concern.

Following is the resolution upon this subject, adopted by unanimous vote:

Resolved, That this Conference, having heard the report of the American Delegates on the American Seamen's Act, 1915, is of the opinion that the working of the Act which gives to American seaman the unconditional right to quit his vessel in any safe harbor, to demand one-half his wages and failing to receive which carries cancellation of contracts, and the abolition of all advances, has acted beneficially to the American seamen and seamen of other nations employed on vessels visiting United States ports; further

Resolved, That every effort should be put forward by the Federated Seamen's Unions of the world to maintain the present Act in its entire scope in ports of the United States. They are, however, of opinion that the extension of the Act at the present time to all countries may be detrimental to the best interests of the seamen of such countries. They therefore resolve that the further extension of the principles of the American Seamen's Act should be left to the judgment and efforts of the organized seamen of each respective country, and we most earnestly protest against any treaty or other international agreement which might in any way curtail the seamen's freedom in ports of the United States, or which would prevent any individual nation from conferring freedom upon its seamen and upon other seamen coming within such nation's jurisdiction.

In connection with the foregoing resolution the subsequent action of the International Convention on Labor Legislation which met at Paris, as per arrangement of the Peace Conference, is of the highest significance.

It appears that on Friday, March 21, this convention reached the American proposals. And this is what transpired according to the memorandum submitted by Andrew Furuseth:

On the question of insisting that "the labor power of a human being is not a commodity or article of commerce" the Convention voted "Aye."

On the question of adopting as part of the "Labor Charter" the thirteenth amendment to the Constitution of the United States—prohibiting slavery or involuntary servitude—the Convention—claiming that there is no such thing in Europe—voted "No."

On the question "that, a seaman shall not be punished by imprisonment for leaving his vessel in a safe harbor nor shall he be arrested, detained and surrendered to his vessel," the opposition, as was to be expected, was led by Great Britain. Mr. Barnes, pleading for the seamen, opposed this declaration. He was followed by Mr. Fontaine, for France, expressing great sympathy with the seamen but feeling that this proposition must be laid over for some body of technical experts. He was followed by Italy, whose representatives took the same position.

Upon the request of Mr. Gompers an adjournment was taken in order that he might keep an engagement with the President of the United States.

On reconvening this day Mr. Gompers made an earnest appeal for some guaranty that the working people who have reached a higher standard than the average which some future conference might be willing to adopt and requested that the question before the House be temporarily laid aside to consider such guaranty. This was agreed to and the following was adopted as a protocol to be read in connection with Article 19 of the Constitution:

"In no case shall any of the High Contracting Powers be asked or required, as a result of the adoption by the Conference of any recommendation or Draft Convention, to diminish the protection afforded by its existing legislation to the workers concerned."

The French suggested that there ought to be either special organization or special meeting to deal with seamen's legislation. After some discussion and with the understanding that it meant eventually this was adopted, the representatives from the United States voting "No."

The question then recurred on the freedom of seamen. A vote was taken, American representatives and the representatives from Cuba voting "Aye," the representatives from England, France, Italy, Belgium, etc., voted "No."

Although the action of the Convention on International Labor Legislation seems discouraging, to say the least, it appears reasonably certain that under the proviso or protocol (printed in blackface type) the Seamen's Act is safe.

It must be borne in mind, of course, that there is nothing definite in the conclusions so far arrived at. In the final analysis the nations which are the component parts of the new world alliance will determine just what is to be considered as "diminishing the protection afforded by its existing legislation to the workers concerned."

What might have happened in Paris had the Seamen of America been without direct, effective and efficient representation is, of course, another story. Nevertheless, this is a point not to be overlooked in considering "history in the making."

AMERICANS GO TO SEA.

We live and learn—that is, some of us do. When the Shipping Board started its merchant marine recruiting service, all the "Gloomy Guses" in the shipping world were as one in predicting that the Board would never get Americans to go to sea. Americans, they said, had ceased to be a sea-faring race, and—well, anyhow, it was cheaper to man our ships with Chinamen.

But they reckoned without the civilizing influence of the Seamen's Act. A report just received by the Shipping Board from the Sea Service Bureau, covering March, 1919, shows that out of a total of 6985 placed by the Bureau on American ships during that month, fifty per cent. were young Americans who have been trained for the sea on training ships maintained by the Shipping Board. The report also states that 90 per cent. of the officers on American ships are now Americans.

Commenting on the report, Henry Howard, Director of Recruiting Service, says:

"These figures tell their own story of the rapid Americanization of our merchant crews. When we started our first training ship, so few Americans were going to sea that we were told it would be impossible to get enough American able seamen to serve as instructors on the work. We were, in fact, three weeks getting fifty instructors for the first ship. But as soon as the country sensed the magnitude of our Merchant Marine revival, there was no further difficulty in getting Americans to go to sea. The change that has taken place in this respect is shown not only in the figures of the Sea Service Bureau, but also in the records of the Recruiting Service. This service began training Merchant Marine officers in June, 1917. Only men with two years' seagoing experience were accepted for training as deck officers, and only those with mechanical or engineering experience as marine engineers. Yet the records of this department show that up to April 1 of this year the schools graduated 8107 men, every one an American citizen. The training ships were not established until January, 1918, but from that month to April 1 of this year the number of young men accepted for training on them as firemen, sailors, cooks and stewards—all full-fledged Americans—is shown by the records to have been 22,573."

And, lo and behold! Wonder of wonders! Here comes our old friend, Captain Robert Dollar, charter member and whilom walking delegate of the aforementioned "Gloomy Gus" brigade, and says it is all true, and that he wouldn't have believed it possible if he hadn't seen it with his own eyes, etc. This is how he unbosomed himself on the subject in Boston a while ago at a conference of Shipping Board officials who invited him to "make a few remarks":

"Gentlemen, I was from Missouri on the American boy going to sea. Now I have been shown. I thought I was right, but I have seen that I was wrong. I went aboard of the Shipping Board training ship "Iris" at San Francisco, and what I saw there changed me. Nobody tried to tell me. I just saw. What I saw was a wonderful crowd of clean American boys, hundreds of them, all being trained as merchant sailors, and all wonderfully keen for their work. Before the war such a thing would not have been possible. Now it is not only possible, but it will go on. Gentlemen, you are on the right track toward manning the new Merchant Marine. There are many problems before us, but you are on the right track."

After that we wouldn't be surprised to hear that Captain Dollar had spoken approvingly of the Seamen's Act, or that he had ordered all his captains to fire their Chinese crews and hire none but union seamen. To be consistent he should do both. Were it not for the improved living and working conditions on American ships due to the Seamen's Act, very few American boys would go to sea on them, and those that did go would not stay long, Shipping Board or no Shipping Board. It is equally certain that but for the labors and money spent by the Seamen's Unions to compel due observance of the Seamen's Act by shipowners and their agents, its status would quickly be reduced to that of a "scrap of paper." And if that should ever happen to the Act, we have an idea that Captain Dollar, notwithstanding his reported change of heart, would be just about the happiest old gentleman you ever saw.

SALE OF WOODEN SHIPS.

A couple of months ago we discussed in the JOURNAL the Shipping Board's problem of what to do with those "lame ducks," the wooden ships built during the emergency period of the war with Germany. Our suggestion at the time was that the Board should auction them off to the highest bidder while the auctioning was still good.

We don't know if the Shipping Board heard of our suggestion or not, and are not

particularly interested in finding out. But, anyway, on the 18th inst. the news of the day contained a statement that the U. S. Shipping Board had sold fifteen of its wooden steamships to the Nacirema Steamship Company of New York. The price received was $650,000 for each vessel, or an average of $145 per deadweight ton.

So far as we are aware of the Shipping Board has not given out for publication whether the transaction involved a gain or a loss to the Government. Some time ago Chairman Hurley, of the Board, stated that in the sale or operation during peace of the fleet built during the war, a substantial writing off would be necessary to allow for the increased cost of labor and materials while the war was in progress. Also, in its second annual report, the Shipping Board announced that contracts for wooden ships which were let up to August 31, 1918, called for an expenditure of approximately $165 a ton. On this basis the sale to the Nacirema Company indicates a loss of $20 a ton as compared with the cost of production during the war, or a total loss of $1,340,000 on the 67,000 tons sold.

Be that as it may, there is another story to tell with reference to the matter. Five of the ships sold to the Nacirema Company were built on the Pacific Coast. When the sale was reported by the press, a prominent Pacific Coast shipbuilder was quoted as having stated that his firm had delivered to the Shipping Board four vessels at a price of $630,000 each, and of the same type and tonnage as those sold to the Nacirema Company. The inference from this would seem to be that on the sale of the five Pacific Coast built ships, out of the total of the fifteen sold, the Government made a net profit of $100,000.

The operating company is not letting any grass grow under its feet, if that metaphor is allowable in this connection. It has informed the Shipping Board that cargoes for all fifteen vessels have already been booked, and that contracts have been made for future voyages. As a result the purchasers are negotiating with the Shipping Board for the purchase of fifteen more ships of the same type, and for immediate delivery. They have also made known their intention of taking over an additional fifteen at a later date. Which is "going some," you must admit—buying ships in lots of fifteen, we mean.

On top of all this comes the news that the Shipping Board is getting ready to sell another job lot of twenty-five wooden steamships. Bids for these will be opened in the office of the Secretary in Washington, D. C., 10 o'clock Monday morning, May 5, 1919.

This lot is described as suitable for coastwise, trans-Atlantic or trans-Pacific trading. The average tonnage of the vessels is given as 3,500 tons deadweight, making a total of approximately 87,500 tons. Their fuel consumption is about 24 tons per day, when averaging 9 knots per hour at sea.

A significant feature of this sale is that successful bidders may transfer any vessel bought to foreign registry, if desired. This ought to please the Captain Dollars, at home and abroad.

From all of which you may perceive that in peace Uncle Sam is just as hustling an auctioneer of ships as he was a builder of them during the war. And as an emergency shipbuilder you will have to concede that he is some pumpkin, all right, all right.

THE CALIFORNIA LEGISLATURE.

Legislators in Golden State Shelve Practically All Reconstruction Measures and Then Vote for Repression.

The forty-third session of the California Legislature was a bitter disappointment to all who have fondly believed that we are living in a period where new conceptions of human liberty, justice and opportunity will be applied in the relations between man and man.

The program on reconstruction submitted by the labor forces was rejected, practically as a whole

On the other hand, labor was sorely pressed at times by reactionaries of various shades and the full day's work of the entire labor lobby often consisted in preventing the mutilation of existing humanitarian laws.

It would be unjust to charge the majority of the legislators with being reactionary. The real trouble was in lack of virile leadership. Again, apart from the dry issue, it is generally acknowledged that there was no working organization in the responsible majority. Thus the genuine Progressives, from the outset, found themselves at a serious disadvantage in warding off attacks.

There was a regular hysteria to put through anti-Socialist, red flag and I. W. W. laws. Three separate bills upon this subject were passed. One of these (A. B. 131) makes it a felony to display a red flag, etc. Another (A. B. 435) amends the existing criminal conspiracy law, presumably to facilitate the prosecution of organized radicals. Finally, there is the Kehoe bill (S. B. 660) defining criminal syndicalism and sabotage, etc. Aimed especially at the I. W. W's it seems almost certain that the latter measure can be and doubtless will be used against the bona fide labor organizations whenever they resort to the strike and the boycott. A proposed amendment guarding against this impending danger was rejected in the Assembly.

This was California's first Legislature in which women had direct representation. Of the four female members in the Assembly, Miss Broughton and Mrs. Dorris readily distinguished themselves as real humanitarian and "worthwhile" legislators. They easily led, not only in comparison with their own sex but in comparison with any two mere men among the remaining one hundred and sixteen. Mrs. Hughes, too, made a fair record. Mrs. Saylor, alone, did not come up to expectation.

It is exceedingly difficult at this time to submit a just and comprehensive estimate of the male legislators. A much better appraisal of the legislators can be had from the usual tabulated report and record which will be issued in due time from the office of the State Federation of Labor.

As usual, the Southern delegation with few honorable exceptions, such as Ambrose and Easton, was against labor. The Anti-Injunction bill, for example, did not receive a single vote south of Fresno. Both in the Senate and the Assembly the San Francisco delegation, with the single exception of Senator Burnett, stood up well on test votes and deserves honorable mention for willingness to help the cause of labor. In addition to those referred to, Senators Kehoe, Benson, Harris, Dennett, Inman Slater and Sharkey are well worthy of special mention for willing and ready service frequently rendered in behalf of those who toil. In the Assembly the same can be said for Messrs. Hurley, Hilton, Bennett and Gebhart.

In accordance with the established custom the State Federation will compile and publish a comprehensive legislative report as soon as all measures now in the hands of the Governor have been definitely disposed of.

This report will serve the purpose of supplying advance information upon the net results of labor's efforts at the forty-third session of the California Legislature.

What Labor Got From the 43d Session.

1. An improved Workmen's Compensation law. The waiting period of injured persons has been reduced from 10 to 7 days, and several much needed changes in administration have been written into the new act.

2 A law providing for the vocational reeducation and rehabilitation of workers disabled in industry

3. An improved Child Labor law.

4. A law limiting the hours of domestic servants to ten per day and sixty per week.

5. An improved Labor Camp Sanitation law.

6. A better Semi-monthly Pay-day law, correcting the defects in the law previously enacted.

7. A law creating a permanent State public works commission to provide for the extension of public works during periods of extraordinary unemployment, etc.

8. An important extension of the State Land Settlement policy (1) by the appropriation of one million dollars to carry on the work of the Land Settlement Board, and (2) submitting to a vote of the people a proposal to issue bonds to the amount of $10,000,000 for a still further extension of that policy so as to provide em-

OFFICIAL.

SAILORS' UNION OF THE PACIFIC.

Headquarters, San Francisco, Cal., April 21, 1919
Regular weekly meeting came to order at 7 p. m., Ed. Andersen presiding. Secretary reported shipping good.

Headquarters, San Francisco, Cal., Apr. 28, 1919.
Regular weekly meeting came to order at 7 p. m., C. F. May presiding. Secretary reported shipping good with few members ashore.
JOHN H. TENNISON,
Secretary pro tem.
Maritime Hall Bldg., 59 Clay Street. Tel. Kearny 2228.

Victoria, B. C., April 21, 1919.
No meeting; shipping slow; members scarce
J. ETCHELLS, Agent.
Room 11, de Cosmos Block, 1424 Government Street.

Vancouver, B. C., April 21, 1919.
Shipping fair; prospects good.
W. G. MILLARD, Agent.
58 Powell Street E. P. O. Box 1365. Tel. Seymour 8703.

Tacoma Agency, April 21, 1919.
No meeting. Shipping and prospects uncertain.
H. L. PETTERSON, Agent.
2016 North 30th St. Tel. Main 808.

Seattle Agency, April 21, 1919.
Shipping fair.
P. B. GILL, Agent.
84 Seneca St. P. O. Box 65. Tel. Main 4403.

Aberdeen Agency, April 21, 1919.
No meeting. Few men around; shipping fair.
ED. ROSENBERG, Agent.
P. O. Box 280. Tel. Main 557.

Portland Agency, April 21, 1919.
Shipping good; prospects good.
JACK ROSEN, Agent.
88½ Third Street. Tel. Main 6013.

San Pedro Agency, April 21, 1919.
Shipping fair.
HARRY OHLSEN, Agent.
128½ Sepulveda Bldg., Sixth St. P. O. Box 67. Tel. 137 R.

Honolulu Agency, April 14, 1919.
Shipping poor; prospects poor.
JACK EDWARDSON, Agent.
P. O. Box 314. Tel. 2526.

MARINE COOKS' AND STEWARDS' ASSOCIATION OF THE PACIFIC COAST.

Headquarters, San Francisco, Cal., Apr. 24, 1919.
The regular weekly meeting was called to order at 7 p. m., Ed. Andersen in the chair. Secretary reported shipping fair.
EUGENE STEIDLE, Secretary.
42 Market Street. Phone Kearny 5955.

Seattle Agency, April 17, 1919.
Shipping good; scarcity of bakers and cooks.
LEONARD NORKGAUER, Agent.
Grand Trunk Dock, Room No. 203; P. O. Box 214. Phone Main 2233.

San Pedro Agency, April 16, 1919.
No meeting. Shipping fair; few members ashore.
JOE MACK, Agent.
613 Beacon St. Phone Sunset 336. P. O. Box 54.

DIED.

Ingvald Larsen Stein, No. 2120, a native of Norway, age 34. Died at Soap Lake, Wash., December, 1918.

"The Rolph shipyards at Eureka will keep on building ships without regard to the action of the United States Shipping Board in discontinuing the fabrication of wooden vessels," was the assertion made by John D. Stelling of the Rolph Shipbuilding Company. The company will put down a new keel every time a vessel is launched, so that the seven ways at the yards will at all times be occupied, according to Stelling. The keels will be for steamers and barkentines, all large vessels.

OUR WASHINGTON LETTER.

(By Laurence Todd.)

Upon the authority of H. E. Wills, senior legislative representative of the four railway brotherhoods, and of John Scott, Secretary of the Railway Employes' Department of the American Federation of Labor, and of William H. Johnston, President of the Internatonal Association of Machinists, I can state definitely that the 2,000,000 employes in the railroad industry in this country stand firmly for the Plumb plan—for Government ownership and democratic control and operation of the railroads.

This is the answer to the desperate attempt made by Harry Wheeler, President of the United States Chamber of Commerce, and of the conference of railroad investors and their officials, at the Willard Hotel here, to induce representatives of organized labor to compromise the issue. They held their most recent meeting a night or two ago. Paul Warburg, the New York banker, according to reports, had drafted a resolution committing the conference to the proposition that the wage question and the rate question could be settled satisfactorily "under private ownership and operation." The railroad bankers and lawyers were trying to trap some labor officials into agreeing to this. Now they know that organized labor cannot be misled; it is standing by the Plumb plan. President Jewell of the Railway Employes' Department, Legislative Agent Doak of the Trainmen, President Ryan of the Carmen, Heberling of the Switchmen, and the other labor representatives who attended the conference have conceded nothing to the bankers and lawyers. They want public ownership and democratic control. They will agree to nothing less.

The railway investors may be pained to learn that Glenn E. Plumb, attorney for the railway workers, is about to open permanent offices in the national capital, in order that he may carry on a campaign of education, financed by the railway brotherhoods, to cover the entire problem of the relation of the railway workers to their job, and why it is that organized labor is through with private ownership and private autocratic control. He is going to show that every wage-worker in America is to-day paying tribute to the handful of stockholders who control the railway companies, and that the industrial conditions of all wage workers are affected by the industrial conditions which these private dictators of railroad management have imposed on the railway workers.

Not for one moment, of course, have Plumb and his associates lost sight of the fact that Postmaster General Burleson has fought the unions in the postal service and the wire service as steadily and by as contemptible methods as has any Wall Street railroad president of the past forty years. But Burleson is the last political accident of his kind; the entire labor movement will attend to that before the national conventions draw up their platforms next year. Other public officials dealing with public utilities may be as cruelly hostile to labor as he, but none will ever again dare to show it.

To-day, because of Burleson's dictatorship in this country, 8000 women and 12,000 men in the telephone industry are on strike in five New England States. Unless President Wilson takes measures as effective as those often employed with a vicious dog—prying open his set jaws—Burleson will probably succeed in bringing on a big sympathetic strike in New England, in industries not related to the wire service. At the same time he may force a nation-wide walkout of the men and women employed in the telephone industry. If it must be assumed that President Wilson is under political bonds to keep Burleson in the Cabinet, then it is at least fortunate that the President is able to occasionally discover and rebuke his more outrageous offenses. If there were no unions among the victims of Burleson, he would probably run amuck without any hindrance at all.

President Gilbert E. Hyatt of the Federation of Postal Employes has recently been in Chicago, trying once more to secure some betterment of sanitary conditions in the post-office building there. For years the postal clerks in Chicago have been compelled to work in crowded, filthy, dark rooms, with results seriously damaging to their health. Union men who have led protests against these conditions have been punished. The rooms have not been improved. The health officials of the city, making a tuberculosis survey, were not permitted to enter the building, since the Post Office Department claimed that the property was under Federal jurisdiction. Postal officials now claim that the Treasury Department is responsible for the filth and darkness and the crowding. Nobody but the union does anything to save the workers' health.

In fine contrast to this situation is the showing made by the State Industrial Accident Commission of California, in a report by Commissioner Will J. French—a veteran member of the Typographical Union—before the recent convention of the State Building Trades Council at Fresno. French showed that in the construction of three big buildings in San Francisco during the past year, due to the fact that safety measures suggested by the Commission were carried out, not a life was lost nor serious injury suffered, after the piling was in. One man was killed while piles were being driven. For guarding the safety of 300 men employed twelve months on the Southern Pacific building—the largest office structure west of Chicago—the cost was $13.10 for each worker, or a trifle over $1 per month per man. In constructing the Santa Fe office building, the safety devices cost less than a dollar per month for each of the 175 men who worked six months at the job. For protecting the lives and limbs of thirty men for thirty-eight days in doing the structural iron work on the great California Theater, only $220 was spent.

Now, that was mighty good economy for the contractors, and it was better than the payment of life insurance for the men who would otherwise have been killed. It is that sort of forethought against industrial accidents that the telephone strikers have been taking, and which the Administration has thus far refused to agree to. It is that sort of forethought that the 2,000,000 railroad workers are going to take, through the strength of their own organized numbers.

Burleson is a huge industrial accident. The organized postal workers and telephone and telegraph workers are trying to shake him off, but the President does not get the idea. The railroad workers, on the other hand, are able to make the big politicians understand that no industrial accident of that sort can be repeated. They are going to have all the safety devices put up on the political building job next year, good and sound, before any votes are cast. They are going to see that no party escapes a guaranty that the Cabinet shall be equipped with pro-labor men who will have authority over the postal service, the wire service, the railroad service, the coal mining industry, or any other industrial enterprise that comes under public control. There is no way of safeguarding the structure of private and autocratic operation of the railroads, but with public operation it can be done and it will be done.

In this connection it is worth noting that the unions of grade school and high school teachers throughout the country are making a fight for the protection of the public school system against the industrial accident of hopelessly reactionary and anti-labor boards of education. President Stillman of the American Federation of Teachers has been in New York City, recently, supporting the fight which the Teachers' Union there is making for its life, against the Tammany mayor, Hylan, who has ordered his board to conduct an inquiry into the entire life history and private views of every member of the union. More than that, the union has been forbidden to meet in any school building.

Mr. Stillman attended a public meeting here to-day, at which Miss Alice Deal, president of the High School Teachers' Union of this city, told the story of the punishment of Miss Alice Wood, a member of that union, by utterly illegal methods, because she exercised the right to disagree with a bank president named Larner, who had been appointed a member of the board, and because her opinions were vetoed by President Hamilton of the Capital Traction Company, who is president of the board. It was made evident that this board is very much opposed to the teachers' unions—as was to be expected of bankers and street railway magnates in these days. Also, that the original complaint against Miss Wood was framed up by one Reeside, the vice-president of Larner's bank, and one Bradley, a director of the same bank. It was brought out also that the sons of these men had tried to organize the boys in their class to spy and inform on Miss Wood and other teachers who were sympathetic with labor organizations here and abroad.

One of the last letters issued by these anti-union dictators of public education in the District of Columbia suggests that the board may be willing to meet, once every six months, a committee representing all the teachers, but it suggests that the committee should represent "one distinct professional organization." That means that the same old answer of the anti-union boss to the union representative is being passed out here to the teachers. As a matter of fact, the union has been holding meetings all winter to deal with educational reconstruction and other problems upon which these street-car bosses and spy-setting bankers are densely ignorant.

At the close of the discussion at to-day's meeting, resolutions were adopted declaring that the teachers are not the servants of the board, but of the people of the district, and that the action of the board "invades the fundamental rights of the teachers, the pupils and the public."

In every city in the country the same anti-labor interests are reported to be entrenching around the school boards to fight the teachers' unions. The fight is made against the spirit of unionism in the first

place, but it is made also in order to terrorize and break the spirit of the pupils who are going out into industry. As one of these anti-labor members of the Washington board said, rebuking Miss Wood: "You have been teaching the children to approach new and dangerous topics with an open mind."

That is a crime marked down in advance against every teacher in grade school, high school or university, who joins the union of educators. Unionism means fundamental democracy. It is contagious. It is not warded off by the calling of ugly names. It sticks, and grows.

Look into the labor attitude of your school board before the game of repression is developed much further.

TIMELY TOPICS DISCUSSED.

I. The Danger of Overdoing Victory.

It is one thing to win a victory, but quite a different matter to handle it wisely when you've got it. The most fateful question of the day seems to be this: Will the Allies be lenient enough with the new Germany to make it worth while for the latter to survive as a republic or will they, to redeem exorbitant election pledges, demand so much territory and indemnity that no German government can deliver it and that a communistic regime will fall heir to the whole Continent east of the Rhine?

That is no idle apprehension. The "statesmen" who for months after the armistice kept up such a blockade that the German masses have been plunged into wild despair, haunted with hunger and the lack of raw materials for work, and who in 1917 and 1918 spurned Russian aid because it was offered by "radicals," are perfectly capable now of killing the (German) goose that lays the golden egg. If President Wilson cannot keep the Clemenceaus and Orlandos from driving Germany and Austria into communism, then the forced solidarity of the outcast peoples outside the League of Nations may convert the latter into another Holy Alliance for the suppression of heresy, and compromise the beneficent purposes it should properly serve. If you doubt it, I suggest a thoughtful reading of that vivid picture of "The Political Scene," by Walter Lippmann, in a supplement to the New Republic of March 22, 1919 (now amplified in book form).

II. The League of Nations.

Among the beneficent purposes which a League of Nations may (and may not) serve, some of the foremost are (a) to remove the usual excuses for "strategic frontiers" and big armies—one reason why the League must be a part of the peace treaty, (b) to prevent the governing classes on the Continent from continuing to stir up race-hatred as a means of scaring their victims at home and reconciling them to domestic oppression, (c) to provide a mechanism for adjusting disputes over colonial raw materials and franchises, which may grow in importance as European and American investments in "backward regions" are resumed, and (d) to provide for representation of peoples as well as governments in an international parliament.

The League as originally proposed is obviously not a democratic institution and it absolves Germany and Russia from the obligations as well as privileges of League members. Insofar as it effectively limits the burden of armaments and requires an airing of grievances and time for the crystallizing of world-opinion before the resort to arms, it is a step in the right direction. But the territorial "adjustments" now proposed for Italian satisfaction and for ultimate control of the Saar Valley will be, if adopted, a provocation to future wars, even if the indemnities do not drive the remnants of Teuton empires into communism.

And if the United States, under any innocent-looking reservation of the Monroe Doctrine as proposed by Elihu Root, shall later claim ungoverned self-assertiveness in the Western Hemisphere without responsibility to the League, that will so outrage the spirit of fair play and common accountability in international affairs as to deal the League its deadliest blow.

That doctrine originally meant simply that European monarchies were not to set up their henchmen in the Western Hemisphere as in fact the French did set up Maximilian in Mexico while we were busy with the Civil War. But its alleged corollary is that we ourselves may set up virtual protectorates (as in Cuba, Haiti, the Dominican Republic, Panama, Honduras and Nicaragua) and in general exercise "righteous overlordship" in this hemisphere while other powers may not do so. The United States already has advantage enough in being the one overwhelming creditor nation. It is to be hoped that we will not cultivate the hatred of Europe or South America by staking off the Western Hemisphere as ours to manipulate in an irresponsible way. The real Monroe Doctrine against tyrants is all right, but its bastard offspring is a snake in the grass, deadly alike to the League and to our own future peace. There are too many Americans who would like, for instance, to embroil this country with Mexico in order to further their own economic interests at the expense of the American taxpayer.

III. Universal Military Training.

General Jan Smuts, in his illuminating "Plan for a League of Nations" (Sec. III of the Nation for Feb. 8, '19) says: "Of the three proposals for disarmament, the abolition of conscription is by far the most important. . . . If the instrument (conscription) is ready for use, the occasion will arrive and the men will arise to use it. Conscription is the tap-root of militarism; unless that is cut, all our labors will eventually be in vain."

But inoculation with the "military mind" is what is wrong with compulsory training, even more than its fruitage in war. For the "military mind" is unimaginative and unintelligent, conceited and caste-ridden, hostile to social betterment, contemptuous of compromise, knowing no instrument but force itching to "maintain order" with the mailed fist, arrogant, insolent—Prussianism incarnate!

It was the military mind which prevented four West Point graduates from attending a dinner with forty ex-civilian officers and noncoms of my section at Washington, the military mind which delights in tormenting conscientious objectors and treating them generally as felons, the military mind which spurned Soviet assistance against the Germans in Russia and is now organizing a modern Klu Klux to hound the independent farmers in Minnesota, the military mind which wasted soldiers' lives in needless attacks on the very morning the armistice went into effect, the military mind which is curing the boys "over there" for all time of any illusions about the beneficence of universal service. When their influence begins to be felt at home, believe me it will be against compulsory training under either local or national auspices. Thank God for that! This country didn't fight Prussianism in order to swallow it whole.

IV. Russia.

I had read the interesting account of "The Testimony of Raymond Robins" in the New Republic of March 29, but heard it at a meeting in Chicago from his own lips. Three hours of facts, facts, facts about recent history in Russia, thrilling "inside" history which only a man with documentary proof would dare reveal. You should have seen the attitude of that originally hostile audience thaw out as they recognized a "man who knows." You should have heard his story of the quick, practical sagacity of our (Red Cross) Colonel Wm. B. Thompson and of the incredible stupidity of Generals Knox and Neville, and his account of the intimate negotiations with Lenine and Trotsky and the cumulative evidence of Soviet power. If you are sick of the newspaper half-truths about Russia and want the truth without their invariable filtering through economic bias, hear Robins at the first opportunity.—Frank F. Anderson.

Privately owned railroads, managed directly by corporation hirelings, with Uncle Sam guaranteeing generous dividends—this is what is called "government control." This is the straw man of Socialism that our reactionaries are industriously engaged in pelting with their pessimistic piffle.—Ex.

Labor's Economic Platform

Following is the Economic Platform adopted by the American Federation of Labor:

1. The abolition of all forms of involuntary servitude, except as a punishment for crime
2. Free schools, free text books and compulsory education.
3. Unrelenting protest against the issuance and abuse of injunction process in labor disputes.
4. A work day of not more than eight hours in the twenty-four hour day.
5. A strict recognition of not over eight hours per day on all Federal, State or municipal work, and not less than the prevailing per diem wage rate of the class of employment in the vicinity where the work is performed.
6. Release from employment one day in seven.
7. The abolition of the contract system on public work.
8. The municipal ownership of public utilities.
9. The abolition of the sweat-shop system.
10. Sanitary inspection of factory, workshop, mine and home.
11. Liability of employers for injury to body or loss of life.
12. The nationalization of telegraph and telephone.
13. The passage of anti-child labor laws in States where they do not exist and rigid defense of them where they have been enacted into law.
14. Woman suffrage co-equal with man-suffrage.
15. Suitable and plentiful playgrounds for children in all cities.
16. The Initiative and Referendum and the Imperative Mandate and Right of Recall.
17. Continued agitation for the public bath system in all cities.
18. Qualification in permits to build of all cities and towns, that there shall be bathrooms and bathroom attachments in all houses or compartments used for habitation.
19. We favor a system of finance whereby money shall be issued exclusively by the Government, with such regulations and restrictions as will protect it from manipulation by the banking interests for their own private gain.

WEEKLY NEWS LETTER.

(Continued from Page 3.)

door to the freedom of the people which is guarded by the Constitution of the United States."

In his opening address to the convention President Greer declared that labor will not accept lower wages.

"Labor does not go backward," he said. "We are going to hold what we have and we are going to march forward. Reduce the wages and you reduce the standards of living, shatter the ideals of workers and force them back to the levels out of which they have emerged by long years of struggle."

Metal Trades Advance.

The American Ship Building Company, representing eight ship yards along the Great Lakes, has signed an agreement with the A. F. of L. metal trades department similar to that signed by the Bethlehem Shipbuilding Corporation. For the workers, the agreement is signed by James O'Connell, president, and A. J. Berres, secretary-treasurer of the metal trades department.

A joint labor adjustment committee of five employers and five trade unionists appointed by the department shall be set up to hear or consider all grievances or other questions affecting wages, hours of labor or working conditions which have been first considered by the joint shop committee and then by the two secretaries appointed by each party to the joint labor adjustment committee.

In the agreement the company recognizes the metal trades department "as a suitable agency to act with the company's representatives to arbitrate all questions as to wages, hours of labor and working conditions."

It is stated that the United States Emergency Fleet Corporation, which operates three shipbuilding yards, will sign a similar agreement, as will the Atlantic Coast shipbuilding companies. Workers in Pacific Coast ship yards are now considering this agreement.

HARD TO PLEASE!

It seems impossible to please some people! After the newspapers and "our best people" have conducted a campaign for months to drive all aliens out of the country and the aliens take it seriously and prepare to move "back to Europe where they came from, when they don't like American institutions," the savings banks are raising a howl about it and want them stopped. It seems that in going back to their own country the aliens are taking with them a trifle of about four billions of money that they have accumulated by hard work and harder saving and this is what pains the bankers. Perhaps it would not be a bad idea to make the living and working conditions in this country such that the aliens would not want to leave—and then maybe the people who were born here might have a chance to make a living.—Seattle Union Record.

The Bank of England has thirty-two different methods of detecting forged banknotes.

JURY FIND FOR SEAMAN.

Editor, SEAMEN'S JOURNAL:—

We have had such poor success in winning cases for seamen where the determination of the facts have been left to admiralty judges, and such good success where the facts have been submitted to a jury, that I beg leave to call your attention, and that of your readers, to the following case:

An Arabian, by the name of Ali Mohammed, was a member of the crew of one of the Lamport & Holt steamers; he had signed in a foreign port and had arrived in New York with about $150 in wages owing to him. Five days out of Norfolk, he had injured his right wrist while using a slice bar; he reported the matter to the engineer who let him lay off a couple of days, and then he was compelled to go to work. No doctor was furnished him. Six days later a doctor was finally called. He was told that he should go to a hospital, but it would be all right to stay on the ship if he was not required to work. On the vessel from New Orleans to New York the rest of the firemen did his work. At the New York Broad Street Hospital a doctor treated him and gave him a certificate indicating that his wrist had been dislocated, that he was suffering from inflammation that should have to be treated before he undertook to do any heavy work.

Nevertheless, the captain of the ship and the British Consul, insisted that he go on board ship to go to England and be paid off, and no substitute was provided. Then he came to me for advice, and I told him to take his clothes and leave the ship, and started suit in the City Court for his wages and maintenance and cure.

The case was defended by Messrs. Burlingham, Veeder, Masten & Fearey, Mr. Paul Allen of counsel assisted by two other attorneys tried the case. Officials of the Lamport & Holt Line came to court to testify. The jury concluded that the doctor at Broad Street Hospital had been caused to change his testimony by reason of conversations with the officials of that line. At any rate, they did not believe his testimony; they did believe the seaman, and returned a verdict for plaintiff in about 20 minutes for the full amount claimed—$259 with costs, which brought the sum to well over $300. The amount of time spent in preparation of the case was so great that it was a losing proposition for me, but the satisfaction of winning made it worth while.

S. B. AXTELL.

SIX MONTHS TO PAY.

The Victory Liberty Loan is here. It is the best bargain of all of America's stupendous war security issues. That financiers and economists agree upon. It is also the last of the Liberty Loans.

The loan is for $4,500,000,000, supported by notes carrying 4¾ per cent. interest and liberal tax exemption features. These are convertible into notes bearing 3¾ per cent. interest virtually free of taxation. The first will be more valuable to the poor man. The rich man will buy the second. Both series mature in 1923, but the Government has the privilege of calling them in, in 1922. The early maturity of these notes makes them a prized investment.

In order to get wide distribution of the Victory Loan among the rank and file of Americans—in order to get these notes into the humblest homes of America, the Government will sell them on time. The man who buys a Victory Note will have six months to pay for it. In other words, the Government does not want the banks to take the Loan even if the banks could.

Six months to pay! Think of the years these boys of ours who have come back without legs or arms or eyes, are going to pay. Is there a man among us who calls himself an American who cannot take his share of this Loan under these terms? Can that man face these armless and legless fellows and tell them why he is not taking his share?

If the war has done one thing for this community it has made it American, heart and soul. It is going to stay American.

The test of that Americanism is its record in the Victory Loan.

Men and Women! This is the last Liberty Loan. Let's stand shoulder to shoulder—Americans all—and finish this war job that those who died shall have died not in vain.

THE CALIFORNIA LEGISLATURE.

(Continued from Page 7.)

ployment and rural homes for our returned soldiers and sailors.

9. The adoption of a resolution which, in effect, endorses the Federal Seamen's Act of 1915, and calls upon California's delegation in Congress to uphold beneficent features of that law.

Some Things Labor Did Not Get.

1. The Anti-Injunction bill. This was considered labor's most important measure. It was introduced exactly as approved by the previous Legislature and subsequently vetoed by Governor Stephens. Although four different State Legislatures enacted such a law this year, five California Senators (Evans, Ingram, King, Rigdon and Rush) who voted for this bill two years ago turned against it this year, apparently for no other reason than to save the Governor the embarrassment of again having to veto labor's bill of rights.

2. The graduated tax on land values, designed to break up large land holdings and make the land available to prospective settlers.

3. The Employment Bureau bill, limiting the fees charged by private employment agencies to 10 per cent. of one month's pay.

4. The Sunday Closing bill.

5. The Miners' Eight-Hour bill.

6. The Barbers' Sanitation bill.

7. The bill providing protection for Alaska Cannery Workers.

8. An investigation of the San Francisco District Attorney's office.

It would be tedious and useless to enumerate the long list of attacks upon the great progressive enactments of the last ten years. Nothing was immune and scarcely anything escaped in this respect.

The Initiative and Referendum, the Women's Eight-hour law, the Workmen's Compensation law, the Housing laws, etc., etc., were all subject to the assaults of the sinister standpat forces which infested the halls of our Legislature and shamelessly advocated reaction rather than progress.

Much of labor's success in preventing reaction must be credited to the earnest and painstaking work of my splendid colleagues in the labor lobby. There was perfect co-operation and harmony at all times and it has been a pleasure as well as a privilege to work for the cause with such men as Daniel C. Murphy, John Finlay, B. J. Wilson, M. G. McIntyre and Harry L. Davis.

Fraternally,

PAUL SCHARRENBERG,
Legislative Representative, California State Federation of Labor.

Sacramento, Cal., April 23, 1919.

The Pacific Steamship Company has been assigned two additional steel ships as flour carriers for the Food Administration. The new steamers, both of which were built in Portland yards, are the "West Hargrave" and the "West Cherow." The former was built by the Columbia Shipbuilding Corporation and the latter is a product of the Northwest Steel Company.

THE HIGHER LAW.

Eugene Victor Debs has gone to jail in a cause as old as time and as noble as human nature—the cause of the fundamental rights of man. Against the arbitrary law which jailed him, he stands as the defender of the intrinsic law. The hearts of true and independent men everywhere follow him with thankfulness as he goes to his high office; and not the least in loyalty among them are those who in varying measure have often opposed his special doctrine. A great man always is generous. And when a great man is wronged, the innate generosity of peoples flows out to him in no uncertain measure. Debs in his cell is well aware how broad this feeling is, and what it means. He needs no encouragement. He is freer there than those he has left behind. He is more at peace, for he has fulfilled his task. He has remained true to his convictions, and has done all that one man can do.

One wonders more and more at the failure of mankind to learn the lesson of truth from century to century. It is such an old and simple lesson—the lesson of the intrinsic law. What was Debs jailed for? To stop the spread of his doctrine? That end, obviously, will not be accomplished. The spread of his doctrine can be stopped only by arguments and ideas. On the score of its own objective, the arbitrary law is its own worst enemy. It definitely retards the principle for which it was enacted, and forwards the principle against which it is brought into play. At certain periods in the world's history, the arbitrary and the intrinsic law tend to swing farther and farther apart, until they bear little relation to each other; the result is natural revolution, the flying together of the two laws again. We are now coming to such a period. Those who have the power of the arbitrary law say: This shall be done. They have forgotten that it will not be done unless it conforms also to the intrinsic law. The Supreme Court did not make Debs change his mind, retrace his course, or abandon a single one of his ideas. These ideas, if they lie nearer than the law of the Supreme Court to the intrinsic law of truth, will overturn the Supreme Court itself in their own time; and nothing in heaven or earth will stop the process. Least of all will the exercise of the arbitrary law stop it: instead, it will greatly accelerate it: yet the arbitrary law will be called upon more and more as the natural revolution draws near. The rulers of men seem overcome with their own perversity. They have learned no faith from life, no wisdom from the ages, no humility from place and power.

A man who has led a life of great courage and virtue, who has consistently championed the cause of the weak and the oppressed, who has gained the love of multitudes and the universal respect of his opponents, whose simple integrity and sweet nobility have carried his name to far places and to high regard—this man is jailed for ten years on the score of outspoken opposition to war. To the intrinsic law of truth, this is sheer absurdity; and every honest man so recognizes it. It is possible only under the technicalities of the arbitrary law. Abraham Lincoln, were he alive, would have cut through the arbitrary law. But in these times we are ruled by arbitrary legalists. The human element has been lost sight of; and, most disastrous of all, it has been forgotten that the human element is the only true basis of government and society. That element, however, cannot be denied too long. The only certain thing in a world of mutation is the final reassertion of the human element.

"These are pregnant and promising days," says Debs, as he entered the prison doors. "We are all on the threshold of tremendous changes. The workers of the world are awakening and bestirring themselves as never before. All the forces that are playing upon the modern world are making for the overthrow of despotism in all its forms and for the emancipation of the masses of mankind. I shall be in prison in the days to come, but my revolutionary spirit will be abroad, and I shall not be inactive. Let us all in the supreme hour measure up to our full stature and work together as one for the cause that means emancipation for us all." These are the words of simple greatness. We may believe or not in the underlying doctrine; we cannot fail to honor and to believe in the man.—The Nation.

SAVING RUSSIA.

From "Here and There With the Thirty-First" American Army Paper, Printed in Siberia.

Note:—That discontent with their senseless Siberian expedition is not confined to the company of American infantry which mutinied recently is made clear by the following sarcastic poem, which boldly appears in the Army paper printed by the Thirty-first infantry which is now in Siberia. Copies have just reached this country. Editor.

My mother says, says she to me,
Most patriotic you must be.
Stand ready, boy of mine, to be a hero;
Be ready with your gun in hand
To fight for this, your native land,
Although its provocation sink to zero.
I'll send you, laddie, night or day,
To die for the old U. S. A.
Against its foes from Britain, Spain or Prussia;
But what she never said to me
Is that she'd send me oversea
To die for Russia.

The Russians may be good or not
(They seem a fairly decent lot,
Although their arguments are thin and squeaky),
But maw, she never said: "My boy,
If you would fill my heart with joy,
Go save the Russians from the Bolsheviki."
I'd like to ask maw if she knows
Why I should tramp through endless snows
Now that the stuffin's out of worthless Prussia;
To ask her if with joy she'd yell
Should I return all shot to 'ell,
Through saving Russia.

So when they put me in a crate
And ship me "Trans-Pacific freight,"
Down in the hold where it is dark (oh, very),
Then dump me on a lonely pier,
A pretty flag around my bier,
They'll cart me off with honors military.
Then home at last, upon the hill
I'll lie beside my Uncle Will,
As if I'd died a hero, fightin' Prussia.
And maw—how happy maw will be
To mark the stone placed over me,
"He died for Russia!"

The war lifted the Chinese rug industry, with its centuries of indifferent activity, from a position of obscurity in relation to Western markets to a place of popularity and permanency, principally because the supply of Oriental rugs from Persia and Turkey was cut off from the American market at a time when large accumulations of wealth had increased the demand. During the year 1917 China exported nearly $800,000 (gold) worth of rugs.

Labor News

The Toledo Painters have established their new wage scale, which raises rates from $5 to $6 a day.

A strike of unorganized employes of the Nashville Bridge Company has resulted in these workers organizing a union of bridge and structural iron workers.

Efforts of the United States Employment Service to secure labor for work on the farms has met with little success, says a statement made public by the Department of Labor.

The War Labor Board decided unanimously for the adoption of a forty-eight hours' week for the silk mills in the metropolitan or New York district. Nearly 110,000 workers in 486 mills are affected by the decision.

The Boston Leather Workers' Union No. 42 announces that the large harness making firms in that city have accepted a new wage schedule, which raises wages from $20 to $24 a week and Saturday half holiday the entire year.

The Ottawa Printing Pressmen and Assistants' Union No. 5 has secured a 10-months' agreement which increases wages $5 a week for cylinder pressmen, $2 to $3.50 for other members and establishes a 45-hour week for night work at one and one-third the day scale.

The War Labor Board in a finding handed down recently recommended that the Western Chemical Company, of Denver, Colo., give women employees equal pay with men for equal work. The Board also recommended that the employes of the company elect a shop committee which would take up with the company complaints of the employes.

The Farmers' National Council, speaking for the organized farmers of this country, are opposed to the plan of Edward N. Hurley, chairman United States Shipping Board, to have the government dispose of its merchant ships to private parties at present market prices. Mr. Hurley suggests that the government charge up its losses in this transaction to "war expenses."

Organized Blacksmiths and Helpers in the United States will not join in any Nation-wide strike in protest against the prohibition law, according to a resolution adopted at the quadrennial session of the International Brotherhood of Blacksmiths and Helpers. The officers are directed to refuse to entertain any propaganda from any source urging such a proposed strike.

The Texas State Legislature has passed a law creating a commission to set minimum wages for women. A woman's division of the State department of labor with three inspectors has been established. Other legislation includes authorization by cities to create a pension fund for aged and injured fire fighters; a plumbers' license law and a law protecting carpenters on tall buildings.

A Connecticut House Committee has made a favorable report on a bill providing that no female shall be employed in any manufacturing, mechanical or mercantile establishment between 10 p. m. and 6 a. m., "provided that in event of war or other serious emergency the Governor may, in his discretion, suspend the limitations upon night work contained in this act as to such industries or occupations as he may find is demanded by such emergency."

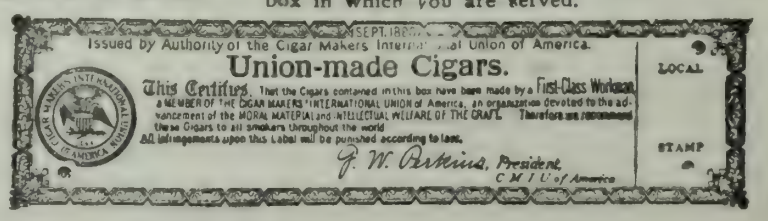
SMOKERS See that this label (in light blue) appears on the box in which you are served.



Are You a Quitter?

The world has no use for the quitter. In the prize ring, on the battlefield, and in the whole field of human endeavor, there is nothing but contempt for the man who fails to see his effort through.

America's reputation for gameness is at stake in the Fifth Liberty Loan. All the fruits of victory will be lost if we fail to finish. It is for every money-earning individual to do his or her part for the nation's good name. Let the world say: "America saw it through —those Yankees never quit!"

DON'T BE A QUITTER!

PUT YOUR DOLLARS BEHIND

THE VICTORY LIBERTY LOAN

ANY BANK WILL HELP YOU

Domestic and Naval

The conversion of Chinese junks or lorcas into auxiliary motor ships is stated to have given very poor results.

Chairman E. N. Hurley of the Shipping Board has said that the dominant type of Emergency Fleet vessels will be the 12,500-ton cargo carrier.

The giant liner "Imperator," one of the twelve German ships allocated to the United States to return American troops, is expected to be delivered in England May 1.

The Commonwealth Government has decided to prohibit the movement of all shipping from Australian ports in consequence of severity of the influenza epidemic in Australia and New Zealand.

The first entente food ships that reached Germany had to leave in ballast on their return trips because in all Germany there could not be collected enough freight to load them. Neither was it possible to recoal the steamers completely.

The head offices of the Prince Line, Limited, heretofore located at Newcastle-on-the-Tyne, are being removed to London. Since the control of the line was acquired by Furness, Withy & Co., Limited, it was expected that such a change would be made sooner or later.

The Government maintained in a brief filed in the Supreme Court that steamships owned by the Government were immune from suits for damages and other legal processes and that it remained for Congress to enact legislation providing for proper adjustment of claims resulting from operation of Government-owned vessels.

It is officially stated that the loss in British merchant vessels of all sizes due to enemy action during the war amounted to 7,759,155 tons. The total tonnage of enemy merchant vessels of 500 tons gross or over in British hands is as follows: Detained, 216,709; condemned, 150,836; awaiting adjudication, 10,565; giving a total of 378,110 tons.

Approximately 1800 officers and men will be engaged under Rear-Admiral Strauss in the dangerous task of removing the 57,000 mines which American naval forces laid in the North Sea anti-submarine barrage. Eighteen mine sweepers will be used, and attached to the fleet as tenders will be twenty submarine chasers now overseas.

Owing to the success achieved with the "Refanut" (the raft built up from lumber in the shape of a ship), it is now proposed to build several rafts twice as large, the deck cargo being discharged at Copenhagen and the "hull" going through the North Baltic canal to England. It is hoped that all the great reserves of timber in Sweden and Finland can be transported by this means.

A regulation has been prepared by the British Board of Trade and the Admiralty, which will forbid the employment (except with the sanction of either of these departments) of anyone as master of a British ship unless he is a natural born British subject, and the son of parents who were at the time of his birth British subjects by birth or naturalization. This regulation will be issued very shortly under the Defense of the Realm Act.

News from Abroad

The vote of New Zealand soldiers has wiped out the majority for prohibition which was rolled up in that commonwealth on April 11.

Sebastopol has been evacuated by the Crimean Government, which is proceeding to Constantinople. The Government of Sebastopol is now in the hands of the revolutionary committee.

A British aviator of the air force has made a record flight from London to Paris in one hour and fifteen minutes, or an average speed of 172 miles an hour, according to a report of the air ministry.

Four Bolshevik agents arrested in Bucharest have been sentenced to long terms of imprisonment by a court martial. Trials of other Bolshevik agents and of persons accused of circulating enemy propaganda continue.

The Australian Government has completed a plan for aerial defense, and proposes to establish aviation schools with squadrons of airplanes, seaplanes and airships. The personnel will number 1400 men. The initial expediture will be $2,500,000 and the annual expenditure thereafter $2,500,000.

Thirteen American soldiers killed in the wreck of an express train at Crisse were buried at Le Mans. The bodies were carried in thirteen Red Cross motor ambulances, covered with flowers and flags, from the American hospital to the cemetery, followed by American commanders and their staffs.

The decision reached by the League of Nations Commission in Paris to make Geneva the seat of the League, has caused the liveliest satisfaction in official circles there. If the decision of the commission is ratified, the headquarters of the league will be established in the immediate outskirts of the city.

Pope Benedict has sent an autograph letter to Cardinal Gibbons, addressed to the entire American Catholic clergy, in which the Pontiff announces that he is presenting to the shrine at the Catholic University in Washington, D. C., a reproduction of Murillo's "Conception" made in the mosaic factory in the Vatican.

Four hundred mining properties in the State of Chihuahua, Mexico, which were confiscated during the revolutions, will be returned to the owners at once. Exceptions were made in the cases of General Luis Terrazas, General Huerta's estate and that of General Pascual Orozco. These properties will not be returned.

Edward L. Dufourcq, an American, assistant general manager of the Teziutlan Copper Company, has been killed and Orme Gaisman, a Swiss subject and business manager of the company, seriously wounded by Zapatistas, who waylaid them, according to an announcement by the National Association for the Protection of American Rights in Mexico.

The first Bolshevik newspaper in France appeared under the name, "Le Titre Censure" ("The Title Censored"), as the title originally proposed, "Le Bolshevik," had been prohibited. The newspaper is a weekly and is edited by Georges Anquetil, who, in an editorial, proclaims himself a Bolshevik doctrinaire. The editor says he will undertake a defense of Bolshevism. He denounces the present condition of human society.

With the Wits

Contributor (as the editor smiles)—How does that joke look to you?

Editor—It never looked better in its life.—Buffalo Express.

"Does your husband play cards for money?" "Yes, but I've given up hopes that he's ever going to get rich that way."—Detroit Free Press.

Physiology Teacher—Robert, you may explain how we hear things.

Bobby—Pa tells 'em to ma as a secret and ma gives 'em away at the bridge club.—Houston Post.

Bobby—Are you the trained nurse mother said was coming?

Nurse—Yes, dear. I'm the trained nurse.

Bobby—Let's see you do some of your tricks.—Fort Ontario Post.

"Owin' to de way smarter men dan I is has got mixed up in arguments," said Uncle Eben, "whenever anybody 'splains de League o' Nations to me, I jes says 'Yesir,' an' goes on 'bout my business."—Washington Star.

"Aren't you the man who used to sign yourself 'Taxpayer'?" "Yes," replied the citizen with a bunch of notebooks. "Now they are not satisfied with my mere signature to that effect. The revenue collector requires an affidavit to it."—Milwaukee News.

"Why don't you get out and hustle? Hard work never killed anybody," remarked the philosophical gentleman to whom Rastus applied for a little charity. "You're mistaken dar, boss," replied Rastus; "I'se lost fouah wives dat way."—Los Angeles Times.

Frayed Phil—Dis paper says dey's quite a lot of people dat thinks it's unlucky ter begin any work on Friday.

Weary Walker—Well, dat's encouragin'. Mebbe after er while people will be dat sensible about every day er the week.—Cleveland Press.

"I understand you come from a great game country?" said the lady on the committee to welcome the grizzly warriors of the Western plains. "Indeed, yes, ma'am," was the cowboy's reply. "What is the biggest game you have in Wyoming?" "Poker, ma'am."—Yonkers Statesman.

"Sorry I gave you the wrong number," said the polite telephone operator. "Don't mention it," answered the man who had made up his mind not to lose his temper. "I'm sure the number you gave me was much better than the one I asked for. Only it just happened I wasn't able to use it."—Washington Star.

An Invitation

We invite deposits from every one—rich, poor, old and young. We recognize no classes, but treat large and small depositors with the same courtesy and consideration.

HUMBOLDT SAVINGS BANK

733 MARKET STREET, Near Fourth
SAN FRANCISCO

Taylor's Nautical Academy

Established 1888

Consular Building, Corner Washington and Battery Streets, Opposite New Custom House, San Francisco, Cal.

THIS OLD AND NOTEWORTHY SCHOOL is under the direct and personal supervision of CAPTAIN HENRY TAYLOR and equipped with all modern appliances to illustrate and teach any branch of Navigation.

The class of teachers of Navigation in the past have been those having simply a knowledge of Navigation, and Navigation only. Conditions have changed, and the American seamen demand a man as a teacher with higher attainments than one who has only the limited ability of a seaman. The Principal of this School, keeping this always in view, studied several years the Maritime Law, and is now, in addition to being a thorough teacher of Navigation and its kindred subjects, a regularly admitted Member of the Bar.

There is no standard of education required of a pupil entering the School, for no matter how ignorant the seaman may be, even in the rudiments of common education, Captain Henry Taylor will teach and raise him from the depths of ignorance to the height of the average well-informed man, and in a comparatively short interval of time.

THE SEAMEN'S JOURNAL

FOR THE SEAFARING PEOPLE OF THE WORLD.
Official Paper of the International Seamen's Union of America.

A Journal of Seamen, by Seamen, for Seamen. Our Aim: The Brotherhood of the Sea. Our Motto: Justice by Organization.

VOL. XXXII, No. 35. SAN FRANCISCO, WEDNESDAY, MAY 7, 1919. Whole No. 2537.

THE SEAFARERS' CONFERENCE

Official Reports Submitted by the American Delegates

The Journal herewith presents the first of a series of reports, etc., on the recent International Seafarers' Conference held at London and Paris during February and March.

Seamen everywhere are earnestly requested to read and digest these reports and the summarized stenographic notes of addresses delivered at the Seafarers' Conference, which are to follow in subsequent issues.

Only through a liberal dissemination of all that transpired at the London conference can the world's seafarers realize and appreciate the importance of the struggle "within" the newly organized International Seafarers' Federation.

76 Victoria Street,
London, S. W. 1,
7th March, 1919.

Mr. Thomas A. Hanson, Secretary-Treasurer,
332 W. Randolph St.,
Chicago, Ill., U. S. A.

Dear Comrade:

The last definite information from me was dated January 8th. It was two days before the meeting of the Executive Board of the British Seamen's Union, which lasted for two days and which I attended.

At this Executive it became perfectly plain that the British Seamen's Union was not going to endorse the Seamen's Act in the sense of having it made a standard for Great Britain. The Executive Meeting took exactly the position that Havelock Wilson had taken, namely: "We want to do everything we can to support and protect the Seamen's Act in the United States, but do not think it good for the British seamen."

Immediately upon the adjournment of that meeting, I went to Paris. While there, I saw the representatives of the French seamen. They stated that they wanted the principles of the Seamen's Act made applicable to France. I further saw the secretary of Colonel House, the secretary of Mr. Lansing, General Bliss, one of the commissioners; Mr. Hurley and Mr. Robinson. Colonel House was sick and could not be seen; Mr. Lansing was too busy to be seen, but through their secretaries I succeeded in filing with the Commissioners a protest against any effort to chloroform the Seamen's Act through the medium of an International Treaty. General Bliss, with whom I conversed, said that the American Commission would be emphatically against any such proposition, and he did not believe that the Peace Conference would do anything in that direction over the protest of the American Delegation. Mr. Hurley was very pleased with the prospect of an International Conference of Seamen, and hoped that the American Seamen's Act might at least be made the model and that a resolution for an International wage based upon the American wage might be passed. Mr. Robinson is an attorney, serving as nautical adviser of the American Delegation. He is for the Seamen's Act because he understands it.

I was in Paris for seven days and went back to London in the hope of being able to visit Denmark, Sweden and Norway. I was detained in London for ten days before obtaining passports to Norway. This made the time extremely short and it became necessary to abandon at once the visit to Denmark. After arriving in Norway, and seeing the Seamen's representatives in Bergen and Christiania, and paying a visit to the office of Mr. Abrahamson, the Social Minister,—Secretary of Labor,—in the Norwegian Government, I was prepared to proceed to Stockholm and Gotheborg when it transpired that a strike was called on the Swedish railways which made any effort to get to Sweden futile. I then visited two sea-coast towns on the East Coast of Norway and came back to Christiania.

Through the intervention of the former Commissioner of Navigation of Norway, whom I had met in London in 1913, I was able to see and have a rather full interview with the Premier, Gunnar Knudsen, and Minister of Merchant Marine and Fisheries, Mr. Friis Petersen. To the Premier and the Minister of Marine and Fisheries I gave a fairly full description of the Seamen's Act. Mr Petersen did not commit himself definitely, but the Premier said: "I shall not have the slightest objection to the incorporation of the principles of the American Seamen's Act into the laws of Norway." He further suggested that I should see the organization of the shipowners, shipmasters and engineers (he is a big shipowner himself), and also some members of the Norwegian Storthing —Parliament.

I found it necessary to have translated into Norwegian, first, a short description of the Seamen's Act showing wherein it differed from the old law, and the Appeal to all the World, with which you are acquainted. Enclosed please find one copy of this Norwegian translation; also an English copy which was prepared in England, and which was published in a London newspaper called "The Herald," the national labor weekly, and I believe—but I am not certain—in the "Manchester Guardian."

The editor and proprietor of "The Herald," Mr. Lansbury, caused the Appeal to be translated into French, and I believe that it was published in two of the large French newspapers after I had left Paris.

In Norway it was published in a weekly newspaper called the "Nationalposten." I ordered one thousand copies of this paper, and had it sent, accompanied by a special note, to all daily, weekly and monthly publications in Norway, to all public reading rooms in Norway, to the members of the Norwegian Government, and to the members of the Norwegian, Swedish and Danish Parliaments.

Going back to England I was in company with one Dane, two Swedes and three Norwegians, who were bound for the International Conference. Two Swedes, two Danes and one Norwegian had either gone before, or gone a different way. On the way, I explained to them as far as I could the Seamen's Act, and they stated that they would vote to make it a standard and to recommend that its principles be extended to all other nations.

We arrived in London on the 23rd of February, in the evening. The Conference met on Monday. Delegates were present from Denmark, Norway, Sweden, England and France. Later on additional delegates arrived from France and one from Italy, and on Tuesday night the two delegates from America reached London late in the evening, and had to walk the streets of London during the night, unable to get a roof for their heads.

This is not a report from the Conference. It sat for seven days and adjourned, to meet again in France on the 11th.

Incidentally we may state that a resolution was adopted unanimously acknowledging the great value of the Seamen's Act to American seamen and all other seamen visiting the United States, and protesting against any Treaty or other agreement which might in any way interfere with the freedom of the seamen in the United States or with any other nation which might choose to adopt the principles of the Act.

The French representatives could not see their way to vote in favor of the principles of the Seamen's Act but it appeared later that it was because they did not understand—because they introduced a resolution exactly on the lines of the Seamen's Act which we seconded, and which was adopted unanimously. Another resolution was adopted, endorsing the language clause of the Seamen's Act, and another resolution making the present American wages the standard, and pledging all other nations' seamen to fight for these wages as the International standard for all seamen. Then they adopted another resolution which means—if we understand its meaning—that the Conference asked the Peace Conference to provide a Commission made up of one national representative from each nation, one representative from each nation representing its shipowners and one representative from each nation representing its seamen, and then asked that this Commission be given power to make laws governing seamen. This proposition, of course, was fought by us to the very utmost. We were overridden, and at once made up our minds that it was our duty to go to Paris and lay the full facts before the American Delegation. When later it was proposed that the Conference should adjourn to meet again at Paris, we, of course, had no objections, inasmuch as we were going to Paris anyway.

There were several other resolutions adopted, some good, some bad, some indifferent. Taken as a whole, the Conference up to the present has proved a failure to really understand.

We have bought a typewritten copy of the transcribed stenographic notes at the price of £25-17-0, which we intend to file with Mr. Robinson, the nautical expert of the American

Commission, so that they will be in a position to judge how far the other delegates really understood this question and as to whether they really desired the surrender by each nation of their jurisdiction over their seamen and seamen coming to their ports. A copy of this official stenographic report will be brought to the United States by the first of us who shall leave for home, of course along with such reports as may be made from the sitting at Paris, and we think it would be well to publish the whole stenographic report in the Journal when it arrives. No copies have been sent of this report except to you and the Secretary of Labor's office, so we expect you, if you think well, to send this out to the other addresses in order that they may get this preliminary information.

You are, therefore, not to consider this as a report, but as a kind of preliminary information forwarded in order that you may have an idea of what is going on and in order that you may understand why we find it necessary to go to Paris.

There was another resolution introduced by the French which will be further considered at Paris. The resolution is to the effect that the French nation, or its shipowners, shall have preference in buying new tonnage, a resolution which we, of course, opposed as being entirely foreign to the purposes of the Conference.

Judging by what can be gathered from public men, and from the press, it appears that if the seamen were to ask for big things, to exhibit a knowledge of why they ask, and insist upon it, they could get those things from most countries now or in the near future. If they ask for small things, it will please the givers better, and they will get that. The real unfortunate thing is that it appears that the officials of the seamen, at least, have neither the vision to see nor the courage to ask.

Respectfully submitted,

(Signed) ANDREW FURUSETH,
PATRICK FLYNN.

Washington, D. C.,
March 26, 1919.

Thos. A. Hanson, Secretary-Treasurer, Chicago.

Following cable received: Seamen's Act safe after terrible fight. Leaving for England tomorrow. Signed Furuseth. From Baily of Ship'g. Board.

Paris, France,
March 16, 1919.

Mr. Thos. A. Hanson,
Secretary-Treasurer,
332 W. Randolph St.,
Chicago, Ill., U. S. A.,

Dear Comrade:

Continuing our preliminary report dated London, March 7th, we have first to state that we deemed it proper and necessary that Comrade Cartledge should come along with us to Paris, because he represented more especially the Cooks and Stewards' department. Having no authorization from his Union, we decided that the cost and expenses of the trip from London to Paris and return should properly be borne by the International. You will, therefore, find his bill for the trip included in our financial statement.

Immediately upon our arrival at Paris, we endeavored to obtain and did obtain a copy of the Covenant of the League of Nations and a copy of the proposed Constitution of the Commission on International Labor Legislation.

In the Covenant we found, as being of special importance to us, the following sections:

Article XX:—

"The high contracting parties will endeavor to secure and maintain fair and humane conditions of labor for men, women and children both in their own countries and in all countries to which their commercial and industrial relations extend; and to that end agree to establish as part of the organization of the League a permanent Bureau of Labor."

Article XII:—

"The high contracting parties agree that should disputes arise between them which cannot be adjusted by the ordinary processes of diplomacy, they will in no case resort to war without previously submitting the questions and matters involved either to arbitration or to inquiry by the Executive Council and until three months after the award by the arbitrators or a recommendation by the Executive Council; and that they will not even then resort to war as against a member of the League which implies with the award of the arbitrators or the recommendations of the Executive Council.

"In any case under this Article, the award of the arbitrators shall be made within a reasonable time, and the recommendation of the Executive Council shall be made within six months after the submission of the dispute."

Article XVI:—

"Should any of the high contracting parties break or disregard its covenants under Article XII, it shall thereby ipso facto be deemed to have committed an act of war against all the other members of the League, which hereby undertake immediately to subject it to the severance of all trade or financial relations, the prohibition of all intercourse between their nationals and the nationals of the covenant-breaking state, and the prevention of all financial, commercial, or personal intercourse between the nationals of the covenant-breaking state and the nationals of any other state, whether a member of the League or not.

"It shall be the duty of the Executive Council in such case to recommend what effective military or naval force the members of the League shall severally contribute to the armed forces to be used to protect the covenants of the League.

"The high contracting parties agree, further, that they will mutually support one another in the financial and economic measures which are taken under this Article, in order to minimize the loss and inconvenience resulting from the above measures, and that they will mutually support one another in resisting any special measures aimed at one of their number by the covenant-breaking state, and that they will afford passage through their territory to the forces of any of the high contracting parties who are co-operating to protect the covenants of the League."

Article XVIII:—

"In the event of disputes between one state member of the League and another state which is not a member of the League, or between states not members of the League, the high contracting parties agree that the state or states not members of the League shall be invited to accept the obligations of membership in the League for the purposes of such dispute, upon such conditions as the Executive Council may deem just, and upon acceptance of any such invitation, the above provisions shall be applied with such modifications as may be deemed necessary by the League.

"Upon such invitation being given the Executive Council shall immediately institute an inquiry into the circumstances and merits of the dispute and recommend such action as may seem best and most effectual in the circumstances.

"In the event of a power so invited refusing to accept the obligations of membership in the League for the purposes of such dispute, and taking any action against a state member of the League which in the case of a state member of the League would constitute a breach of Article XII, the provisions of Article XVI shall be applicable as against the state taking such action.

"If both parties to the dispute when so invited refuse to accept the obligations of membership in the League for the purposes of such dispute, the Executive Council may take such action and make such recommendations as will prevent hostilities and will result in the settlement of the dispute."

You will see that Section 20 gives the authority, and the other sections are the means of enforcing obedience to any action that may be taken dealing with the working people. The League of Nations is necessarily the judge of what is "fair and humane conditions."

The proposed Constitution of the International Conference on Labor legislation had not been finally adopted—there was, in fact, a struggle on about its final contents, the representatives from the United States being the principal objectors.

The preamble of this proposed Constitution reads as follows:

Preamble:

"Whereas the League of Nations has for its object the establishment of universal peace, and such a peace can be established only if it is based upon social justice; and

"Whereas, Conditions of labor exist which involve such injustice, hardship, and privation to large numbers of people as to produce unrest so great as to be a menace to the peace and harmony of the world; and an improvement of these conditions is urgently required; as, for example, by the regulation of the hours of work, including the establishment of a maximum working day and week, the prevention of unemployment, the provision of an adequate living wage, the protection of the worker against sickness, disease, and injury arising out of his employment, the protection of child and female labor, provision for old age and injury, protection of the interests of workers when employed in countries other than their own, recognition of the principle of freedom of association, and other measures.

"Whereas, also, the failure of any nation to adopt humane conditions of labor is an obstacle in the way of other nations which desire to improve the conditions in their own countries:

"The high contracting parties, moved by sentiments of justice and humanity as well as by the desire to secure the permanent peace of the world, agree to the following convention:—"

From Chapter II procedure we deem it important to insert the following:

Article XIX.

"When the Conference has decided on the adoption of proposals with regard to an item in the agenda, these proposals shall be embodied in a draft international convention. This draft convention shall then forthwith be laid for final consideration and decision before the Conference.

"If on the final vote the convention receives the support of two-thirds of the votes cast by the delegates present, it shall be held to be adopted by the Conference, and a copy of the convention authenticated by the signatures of the President of the Conference and of the Director shall be deposited with the Secretary-General of the League of Nations.

"Each of the high contracting parties undertakes that it will within the period of one year at most from the end of the meeting of the Conference communicate its formal ratification to the Director, and will forthwith take all steps necessary to put the Convention into operation, unless such convention fails to obtain the consent of the competent authorities.

"In the case of a Federal State, if the power of legislation on any matters dealt with in a convention rests with the legislatures of the constituent states, the high contracting party shall communicate the convention to the constituent states, and each such state may adhere separately to the convention. Notification of the adhesion of any such state through the Federal Government to the Director shall be deemed to be the ratification of the convention in respect of that state."

Article XX.

"Any convention so ratified shall be registered by the Director with the Secretary-General of the League of Nations and shall, subject to any conditions which may be contained in the convention itself, be binding upon all states which have ratified it or which shall subsequently ratify it."

Article XXI.

"If any convention laid before the Conference for final consideration fails to secure the support of two-thirds of the votes cast by the delegates present, it shall nevertheless be within the right of any of the high contracting parties to agree to such convention among themselves.

"Any convention so agreed to shall be communicated by the governments of the states concerned to the Director, who shall register it with the Secretary-General of the League of Nations."

Article XXII.

"Each of the high contracting parties agrees to make an annual report to the International Labor Office on the measures which it has taken to give effect to the provisions of conventions to which it is a party. These reports shall be made in such form and shall contain such particulars as the governing body may request. The Director shall lay a summary of these reports before the next meeting of the Conference."

Article XXIII.

"In the event of any representation being made to the International Labor Office by an industrial association of employers or of workpeople that any of the high contracting parties has failed to secure in any respect the effective observance within its jurisdiction of any convention to which it is a party, the governing body may communicate this representation to the state against which it is made and may invite that state to make such statement on the subject as it may think fit."

Article XXIV.

"If no statement is received within a reasonable time from the state against which the representation is made, or if the statement when received is not deemed to be satisfactory by the governing body, the latter shall have the right to publish the representation and the statement, if any, made in reply to it."

Article XXV.

"Any of the high contracting parties shall have the right to file a complaint with the International Labor Office if it is not satisfied that any other of the high contracting parties is securing the effective observance of any convention which both have ratified in accordance with the foregoing articles.

"The governing body may, if it thinks fit, before referring such a complaint to a commission of enquiry, as hereinafter provided for, communicate with the state against which the complaint is made in the manner described in Article 23.

"If the governing body do not think it necessary to communicate the complaint to the state against which it is made, or if, when they have made such communication, no statement in reply has been received within a reasonable time which the complaining state considers to be satisfactory, the governing body shall apply for the appointment of a commission of enquiry to consider the complaint and to report thereon.

"The governing body may adopt the same procedure either of its own motion or on receipt of a complaint from a delegate to the conference.

"When any matter arising out of Articles 24 or 25 is being considered by the governing body, the state against which the representation or complaint is made shall, if not already represented thereon, be entitled to send a representative to take part in the proceedings of the governing body while the matter is under consideration. Adequate notice of the date on which the matter will be considered shall be given to the state

WEEKLY NEWS LETTER

Contributed by American Federation of Labor

Six-Hour Day Urged; Miners Often Idle.

In defense of the six-hour-day demand of organized coal miners, the United Mine Workers' Journal quotes statistics by the United States Bureau of Mines to show that during the past ten years the average days worked in the mines of this country ranged between 195 days in 1908 to 251 days in 1917. No figures are given for last year, when all mining records were broken, although 70,000 members of the United Mine Workers were with the military forces.

"We see from these official figures," says the United Mine Workers' Journal, "that even in the years when the demand for coal was at its highest point the miners worked only an average of from 209 days (in 1915) to 251 days (in 1917) out of the 312 working days of the year. And yet they met every demand and every requirement. They could have produced a billion tons of coal in a year if it had been needed, instead of approximately 660,000,000 tons, which was the highest mark.

"If the miners produced this amount of coal in 251 eight-hour days, they could have met the same demand in 312 six-hour days. And if they were paid the same price per ton for producing the coal, what difference would it make in the cost whether they produced the coal in eight hours or six hours? None whatever.

"If the miners can produce in six hours all the coal that is needed, why should they be required to work eight to get out the same amount of coal?"

Postal Chief Scored by Boston Newspaper.

Responsibility for the strike of telephone girls and electrical workers that tied up business in that section of the country is laid at the door of Postmaster General Burleson by the Boston Evening Record.

In an editorial entitled "The Casual Mr. Burleson," that paper says:

"What Mr. Burleson appears incapable of understanding is that there is a deep-seated and ineradicable hostility towards his method of exerting Government control over the telephone system. What he fails to comprehend is that in its present status this strike is not simply a strike for higher wages, but is a protest against his inefficient and exasperating method of treating such questions.

"The attitude of the telephone operators is that they have been handed promises and have encountered vexations and delays for three months, and that they are not interested in any promises of a continuance of precisely those conditions against which they have made their stand. Presumably if Mr. Burleson should tell the operators that their schedules for higher wages would be immediately accepted, they would return to the switchboards. Mr. Burleson offers nothing of the kind. The striking operators are quite logical in assuming, then, that his promise of further consideration implies no such granting of their demands, but, on the contrary, may lead to a modification or complete denial of them.

"Mr. Burleson throughout the situation—which began to develop three months ago—has shown an amazing lack of understanding and an exasperating inability to grasp the fact that by dawdling and shifting, the convenience and safety of Boston, and other cities, was being imperilled. His course thoughout has been futile and it has produced disaster. His latest action is consistently blundering."

Fight Contagious Ills.

A nationwide campaign to prevent all communicable disease from following in the wake of the war is being inaugurated by the United States Public Health Service.

Appeals are being made to every community in the land through the mayors, health officers, chambers of commerce, community councils, Red Cross chapters and citizens generally who are interested in health and welfare to stir them to action.

A program of work outlined by Surgeon-Geieral Blue shows the organization required and the diseases most commonly known.

The water supply must be made safe by regular bacteriological tests to prevent typhoid fever, diarrhoea, dysentery and other water-borne diseases. Next in importance is the elimination of flies and the screening of food.

"An effort to ascertain whether or not the milk supply is safe is of the utmost importance," Dr. Blue said.

"Are the schools provided with medical supervision to control the spread of communicable diseases among the children and to limit the number of sources of contagious diseases which often spread rapidly when carried to susceptible persons?"

Good Will Necessary.

The average workman resents any tendency on the part of his superiors to look upon him as an automaton, says the California Safety News, issued by the California State Accident Commission.

"He does, however, respond readily to any attitude which appears to give him a square deal and he will in nearly all cases respond in a co-operative way to any proposition which is put to him on a practical common-sense basis.

"The workman should always be encouraged to make safety suggestions. Companies have thought it advisable to offer prizes for good suggestions, but it has been found rather that a letter from the management, expressing appreciation of the value of the suggestion, is almost certain to obtain a higher degree of co-operation from the recpient. In fact, some workmen positively refuse to respond to what they term 'bribing with prizes.'

"The most lasting interest is probably that which is awakened when the workman is brought to a realization of his responsibility, first to his dependents and second to his fellow workers. There have so far been developed no hard and fast rules which can be followed in all cases

World's Workers

For every 100 workers in the factories of Sweden there are twenty-three women.

Trade union membership in Switzerland has increased over 15 per cent. in the last two years.

The S. Bleichroeder Banking Company, which owns nearly all the shares of the great Oppeln mine, at Oppeln, Silesia, has arranged to turn over its stock to members of the miners' union at par. This mine, if the arrangement is carried out, will become the first in Germany to be owned by the employes.

The total number of strikes in the kingdom of Sweden for 1918 was 458. These strikes involved 399 employers and 45,019 workers. There were eight lockouts, involving 666 employees. The total number of working days lost was 1,108,819. These figures are far in excess of those for the year 1917.—(Svenska Soclialisten, Chicago, April 17.)

The newly-formed Dunedin Storemen's Union has filed an industrial dispute with the proprietaries of the various wool stores, and the case will come before the Conciliation Commissioners in due course. The union is asking for a 44-hour week and for £3/17/6 a week to permanent hands and 1/10 an hour for casuals.

The London Times in recent issues gives prominence to the serious conditions of unemployment existing in the cotton districts of Great Britain A primary cause is said to be the stoppage of machinery for lack of orders, a condition which, it is claimed, could be remedied partially by the raising of the blockade for the export of cotton goods to neutral countries. In Lancashire and Cheshire the out-of-work government donation is being paid to about 70,000 cotton operatives. Some unemployment figures are given; Acrington, 8700; Blackburn, 26,000; Burnley, 25,000; Bury, 7260; Oldham, 11,400; Preston, 12,300. The operatives emplowed are seeking a reduction in hours from 55½ to 44 per week without a decrease in wages, but the employers maintain that, in view of the increased competition from America, India and Japan, a reduction in wages must accompany reduced working hours.

The war has hastened the movement toward the amalgamation of British unions, already of considerable strength before war was declared The newest of the important amalgamations is a scheme for joining together the trade unions connected with the engineering and shipbuilding industries, and the Amalgamated Society of Engineers has just held a special meeting to discuss the proposal. If the scheme fructifies it will mean an amalgamation of 600,000 workmen. At the same time there is a proposal that the famous Triple Alliance of Labor shall be converted into a quadruple alliance by the entry of the postal workers. The strongest numerically of the postal unions is the Letter Carriers' Association, and the desire is to amalgamate this union with the Post and Telegraph Clerks' Association, in which organization practically every worker in the postal service would then be included. Officials of the Postal Union would then feel justified in approaching the Triple Alliance with their suggestion for co-operation.

Pacific Coast Marine.

To the fourteen government wooden steamships now laid up in the Lake Union basin of the Lake Washington ship canal eleven more will be added within the next sixty days.

Eighteen wooden steamships built in Puget Sound and Gray's Harbor shipyards are at various plants in those two districts having steel rudder stocks installed in place of wooden ones.

The Crowley Company is preparing its two double-deckers for a big volume of picnic travel expected to develop this summer. These and other craft will be used to convey the big crowds from San Francisco to Paradise Park, on the Marin coast.

Captain Emil Hellesto, master of the steamer "Grays Harbor," had his license suspended for three months by Inspectors of Hulls and Boilers J. Guthrie and J. T. Dolan. Captain Hellesto was in command when his ship ran aground on Fish Rock.

An aggregate of 430,000,000 pounds of canned salmon, having a value of $51,041,949, reached Seattle docks in the year 1918, according to a compilation by the United States Bureau of Fisheries. The figures do not include an enormous amount of salmon that was salted and mild-cured.

Alaska passenger agents in Seattle are swamped with inquiries relative to excursion trips to Alaska this spring and record traffic is expected. The tourist season north begins in June, when the Admiral liner "Senator" will make the first trip of the season into Nome to open navigation.

To be completed by June 1, 1920, with five of them to go into commission this year, twelve steamships of large capacity, including two 10,000-ton passenger liners for the Seattle-Far East trade, are building for the Osaka Shosen Kaisha in Japan, according to advices received by the Seattle agency of the company.

According to present plans of the Alaska Sulphur Company, which is opening its mines on Akum Island, Alaska, 1,000 tons of sulphur a month will be shipped east by way of Puget Sound. The Company intends to purchase a steamer to bring its product to Puget Sound, and also to carry supplies to its plant.

Shipping men of Seattle and vicinity who have been assigned as managers or operators of Shipping Board vessels, announced formation of the Puget Sound Steamship Managers and Operators' Association, with W. C. Dawson as president. Tacoma shipping firms with similar interests have been invited to affiliate.

The four-mast sailing schooner "Gunn," building in the yards of the Cholberg Ship Company for Norwegian interests, has been chartered to the British Columbia Mills, Timber and Trading Company, Ltd., of Vancouver. She will load at the Hastings mill, Vancouver, late in May and will get a rate of $45 net prepaid. The vessel will take a cargo of 1,200,000 feet of lumber.

Dredging work in Coos Bay channel will be carried four feet deeper than was first planned, according to announcement from the United States Engineers' office, thus giving a low water depth of twenty-two feet in the harbor entrance. The engineers' dredge "Oregon" has gone to Yaquina to remain until the end of May, after which she will go to Coos Bay to join the dredge "Colonel P. S. Michie."

Asked the reason why so many new steel steamships are in Seattle harbor awaiting delivery, Captain W. A. Magee, Northern Pacific District Manager of the Emergency Fleet Corporation, explained that after a new steel carrier has been in the water forty days or more before acceptance the Government requires drydock inspection. The seven-week shipyard strike early in the War placed a number of new carriers in that classification, as they were in the water when the strike began.

Two Ferris vessels, finished some time ago by the Coos Bay Shipbuilding Company, but held waiting Government orders, are being equipped with new features, among them coverings for all piping on the main deck, providing against damage by proposed coal cargoes. The new addition to the boats contemplates that coal room will be utilized in the enclosed portion of the main deck to permit offshore sailings without danger of exhausting the fuel supply.

Capt. Ferguson of the Peninsula-built wooden motorship "Adrien Baden," writing from Sourabira, states that the vessel made an excellent showing on two legs of a long ocean trip. She reeled off 2,900 miles in 15 days in one instance and 2,500 miles in 13 days in another. Captain Ferguson says his present vessel is the best she ever sailed in, and that he did not have to spend one cent on her decks. He says she burns thirteen barrels of fuel oil and only ten gallons of lubricating oil per day, which is very economical.

According to the owners of the sailing vessel "Glory of the Seas," in commenting on the run of the barkentine "Sterling" from San Francisco to Sydney this voyage, the "Sterling" still has to go some to make the record the Tacoma vessel made more than forty years ago between the two ports. The claim is made that the "Glory" negotiated the run of a little more than 6000 miles in thirty-five days. The old ship is now owned by the Glacier Fish Company, and used as a cold storage vessel. Her hull is in excellent condition.

Twenty-nine vessels loaded at the mills of the lower Columbia River district during the month of April, and their combined cargoes amounted to 20,283,793 feet of lumber, according to statistics compiled by Deputy Collector Haddix. Twenty-five of those vessels carried 18,714,000 feet for California; one, laden with 14,423,959 feet, went to the Atlantic Coast; two craft, carrying 143,854 feet, went to Alaska, and one, laden with 300,000 feet, is en route foreign. In the same period, five vessels loaded 1,575,000 feet at the up-river mills, making a grand total of 22,158,795 feet of lumber that left the Columbia River in cargoes during the month of April.

Wireless telephones will be installed on tugs and launches of the Henry C. Peterson Company if negotiations now taking place between the boat company and the Marconi Wireless Company prove effective. Permission for the commercial use of the telephone has been asked of Washington. The Peterson company believes it can increase the efficiency of its present fleet of craft at least 50 per cent. and that the cost of the wireless telephone equipment would be more than offset by the saving in price of additional equipment, the purchase of which was contemplated at the time the telephone was first considered. The expected saving would be effected, officials of the company say, by having the captains of the boats constantly under call and by obviating the doubling back that is often necessary to pick up a tow in the same part of the harbor that a tow is dropped.

The fitting of a tug and a freight hull with semi-Diesel engines is the latest innovation in river transportation and the craft are being rushed to completion to handle the bumper 1919 crops. The work is to be completed within sixty days. A seventy-five horse power engine will be installed in a fifty-four foot tug that is designed to tow a 110 by 30-foot barge of 300-to capacity. The second unit will be a regular river freight hull that is to have twin sixty horse power engines and with a carrying capacity of 300 tons. Six horse power hoisting appliances will be part of the equipment of both the barge and the freight hull. It is expected that these boats will be the most economical operating and running vessels on the San Joaquin and they are expected to attract wide attention. At present the only power is steam or distillate. The new boats will burn four and one-half cent oil or fuel costing one-half the price of distillate.

A protest against the threatened cancellation by the Shipping Board of contracts for all ships for which keels have not been laid was voiced by the shipbuilders of California, meeting during the week at San Francisco with representatives of labor. The Mayors of San Francisco and Oakland, Senator James D. Phelan and Congressmen J. A. Elston and John I. Nolan were present and spoke of the effect of such an order, were it to be made, promising their active opposition. The conclusion was the adoption of resolutions calling upon civic and industrial organizations to voice opposition to the threatened cancellation in messages to Chairman Edward N. Hurley. It was said that the effect of cancellation would be so serious that every measure possible should be taken to prevent its actual promulgation. Some of the speakers advanced the explanation that the Shipping Board, fearing criticism by the coming session of Congress on the operation of the "cost plus" plan, is seeking the backing of popular expression in advance.

Further details of the two express liners which the Pacific Steamship Company contemplates building for the Seattle, San Francisco and San Diego freight and passenger trade were announced by A. F. Haines, general manager of the Admiral Line. Haines said the vessels would be of 6,000 tons register each, would have accommodations for 500 first cabin passengers and a speed of not less than twenty-one knots. The new liners will not have a greater cargo-carrying capacity than the "President" or "Governor." To increase the freight capacity, Haines said, would mean that the new liners would be required to remain longer in port loading freight, thus making it impossible to establish a forty-eight-hour service between San Diego and Seattle, which is the company's object in constructing the two vessels. Haines asserted that bids would be called for within a short time. It is hoped to have both vessels in service within eighteen months. The "Queen" and "Admiral Dewey" will then be shifted to the Alaskan service. Haines predicted that vacation travel by sea this season will be the heaviest in years.

F. R. WALL, who was for many years an officer in the United States Navy, is now practicing marine law in San Francisco. He gives claims of all seafarers careful attention. 324 Merchants Exchange Bldg., 3rd Floor, California St., nr. Montgomery. Phone, Sutter 5807 (Adv.)

Advertising Rates on Application.
Business and Editorial Office, Maritime Hall Building, 59 Clay Street, San Francisco. Telephone Kearny 2228.

Changes in advertisements must be in by Saturday noon of each week.

To insure a prompt reply, correspondents should address all communications of a business nature to the Business Manager.

Entered at the San Francisco Postoffice as second-class matter. Acceptance for mailing at special rate of postage provided for in Section 1103, Act of October 3, 1917, authorized September 7, 1918.

NOTICE TO CORRESPONDENTS.
Communications from seafaring readers will be published in the JOURNAL, provided they are of general interest, brief, legible, written on one side only of the paper, and accompanied by the writer's name and address. The JOURNAL is not responsible for the expressions of correspondents, nor for the return of manuscript.

WEDNESDAY, MAY 7, 1919.

GOVERNMENT OWNERSHIP.

What is our National Merchant Marine policy?

Perhaps the best answer is a frank declaration that—as yet—there is no such thing as a National policy in this respect. On the other hand, it would be only fair to supplement this assertion by pointing to the fact that for the first time in many, many years the principal interested factors in our National life are at least earnestly trying to define such a policy.

Three courses are apparently open:

First. The adoption of a policy of public ownership and public operation of merchant vessels.

Second. A policy of public ownership, but operation by private firms to whom Government vessels would be chartered, leaving in the hands of the Government a general control of policy and rates.

Third. The sale to private owners, upon sufficiently favorable terms to attract purchasers, of all Government owned merchant vessels, leaving to the purchasers freedom of operation.

As to the first proposition, the theory of public ownership is well understood, but the practical operation of that system is not so well known. Experience in dealing with publicly owned and controlled vessels has led many former enthusiasts to the conclusion that unless the rights of the employes are carefully conserved their conditions may be no better, and may even be worse, than those of the private employe. It is contended, therefore, that in every scheme of public ownership provision should be made for the protection of the employes in all their rights of citizenship, including the right to organize and to exercise all the powers of organization. Should it be determined that this policy is inconsistent with the principle of public ownership, many of the veterans in the labor movement would frankly prefer to bear the ills of private ownership rather than risk the loss of that power upon which in the long run labor must depend for its own advancement.

It is a curious fact that the public side of the question has been amply exploited, while little or nothing is known concerning the position of labor under public ownership. In this particular, boosters for public ownership are prone to take too much on trust, on the assumption that the word "public" implies some magical power to change the very nature of things. So far as labor is concerned, the choice between public and private ownership is chiefly a choice between bosses—between a number of small bosses and one big boss. Both public and private bosses seek the same object, namely, cheap labor. It is a fact worth noting that in this respect the big boss has an advantage over the small boss. That is to say, the public employer has a stronger motive for seeking cheap labor and a greater power to secure it, as compared with the private employer. It is therefore the more imperative that the employees of the big boss (i. e., the public) should be assured the full exercise of every possible and legitimate means of self-protection.

No immediate advantage arising from public ownership can compensate for the surrender of the power to secure more, and ever more, improvement in the future. Possibly this surrender is inherent in the principle of public ownership. That it is more difficult to exercise all the powers of organization in the case of trouble with a publicly-owned utility than in the case of a private corporation is proved by common experience.

Many of the best and keenest minds in the ranks of the workers still insist that the right of labor to organize and to exercise all the powers of organization is the chief desideratum in a choice between private and public ownership. In other words, it is a choice between dealing with a "soulless corporation," whom nobody loves, and the public, whose rights are deemed sacred from "attack."

When the public assumes the role of employer, its motives and interests become the same as those of the private employer, and its employes must therefore be guaranteed the same freedom of action, individually and collectively, as in the case of private employes. If such policy be inconsistent with public ownership, that fact would outweigh any possible advantages of the system.

These views apply with equal, and possibly greater force in considering the question of public ownership of merchant shipping. The shipping question is in a different category from that of a public utility operated entirely within the jurisdiction of the Government—that is within the territory of the United States—for the reason, among others, that ships entering the ports of foreign countries are subject to the laws of such countries, which may, or may not, be consistent with our own laws.

The American consul in a foreign port, who now represents the Government in disputes between seamen and shipowners, would under public ownership represent the shipowner. Of course, he would still represent the Government, but in its capacity of shipowner. Seamen frequently complain of the partiality of consuls toward shipowners, even going so far as to charge that the consuls are mere agents of the shipowners. Under public ownership this charge would be an established fact, with this difference, that whereas under the present system the consul may be held accountable to the Government as a disinterested party, under the system of public ownership the consul would be responsible to the Government as a shipowner. Such a change in the relations between the consul and the Government would increase the seaman's difficulties in dealing with his employer.

Presumably the Government would be represented in foreign ports by agents, who would occupy, nominally at least, the same position as the agents of the private shipowners, and therefore subject to the authority of the consul. Nevertheless, the latter would be at a disadvantage in asserting his authority over the Government agents, who would be themselves officials of another branch of the Government.

The same objection applies in the case of shipping-commissioners, collectors of customs, and other officials in American ports. All officials who are vested with authority to enforce the Navigation Laws, and who succeed in doing so by virtue of the "authoritative" position they occupy toward the private shipowner, would be practically powerless under public ownership, for the reason that it is impossible for the officials of different departments to exercise any authority over each other. For instance, a shipping-commissioner may require a private shipowner to settle accounts with a seaman, or take his chances in a law suit. But in the case of claims by seamen employed on publicly-owned vessels the shipping-commissioner is powerless to do more than make representations.

In both instances the seamen are employed under the same law; in both instances the shipping-commissioner has nominally the same authority and responsibility; but the outcome in each instance is different because of the difference in the position actually occupied by seamen and shipping-commissioner toward the shipowner. The seaman employed on the publicly-owned vessel suffers by reason of the fact that in his case the shipowner (i. e., the public) can not be reached by the ordinary processes of law or influenced by the ordinary officials of the Government. As to the seaman's position in event of recourse to the courts, it is questionable if suit could be entered against the Government. In any case it is beyond question that the seaman would be at a disadvantage in suing the Government, as compared with his position in a suit against a private shipowner.

The second proposition outlined at the beginning of this article seems to be entirely impractical. It contains the objectionable features of both public and private ownership, and besides involves a divided responsibility that would leave the seaman practically without recourse in either direction.

The present system of management through the United States Shipping Board affords an example of the probable workings of the proposed system. Under the Shipping Board system the private shipowner is bound by the regulations of the Board. In many important instances these regulations are contrary to law and work an injustice to the seaman. The shipowner may be willing to comply with the Navigation Laws, but he finds himself powerless in the matter. Appeal to the shipping-commissioner, and by the latter to the Shipping Board, is usually met by a reference to the regulations—and there the matter ends.

Such a system would be a cat-and-

mouse affair, the shipowner being allowed a certain amount of freedom, but never entirely free. It may be taken for granted that the Shipping Board system was a wartime necessity, justified both by the needs of the occasion and the results achieved. But any system to be adapted to the needs of normal times must be free from "regulations" and other forms of interference that amount to a species of overlordship. In a word, the system must be exclusively that of public ownership and control or private ownership and control. The two systems cannot be combined. Any attempt to do so will simply make for confusion.

Considering the objections enumerated to the first and second propositions it would appear (with due regard for existing conditions, economically, politically, etc.) as if the third proposal is the more desirable—as a lesser evil!

Leaving to others the question of terms for the purchase of ships, it is suggested, however, that in whatever plan be agreed upon provision be made for the creation of a body, or council, composed of shipowners and seamen, whose function it shall be to supervise the operation of the ships and to exercise at least advisory authority in all matters relating to the conditions of the seamen employed on ships. A future issue of the JOURNAL will discuss the proposed advisory council of merchant shipping.

It will be noted that the question of public ownership has been dealt with herein solely as it affects the interests of the men employed in the respective industries, and without regard to any consideration of advantage, or otherwise, to the public. Again, it should be borne in mind that the subject dealt with is essentially a National, as distinguished from the municipal utility. In the case of municipal light, heat, water, etc., the argument of public ownership is stronger because the justification therefor is greater, while the objections are weaker because the power of the employer (i. e., the public) is also weaker. The question of municipal ownership stands by itself and should be discussed by itself.

It may be that no inherent danger or difficulty exists in the relations of employer and employe in the case of a national utility such as railroads or ships, and that the objections pointed out in the foregoing may be met by making the needed provisions in the plans of ownership and operation. In that event the case would stand in a different light, and the only question remaining would be one of general public policy. This in itself, is a serious matter, concerning which there is room for discussion.

Rome fell when one per cent. of the population owned ninety per cent. of the wealth. Is America heading the same way?

Oliver Goldsmith wasn't talking at random when he said that the law grinds the poor, and the rich men rule the law.

Don't be afraid of unconventional thoughts; all thinking worth while has shocked some fool.

Just criticism never did any nation or individual harm, and the other kind cannot.

WANTED—WITNESSES.

Progress of the Prosecution in the "Puako" Case—Hell-Fire Pedersen's Unsavory Record to be Exposed.

The Journal is in receipt of the following self-explanatory communication from Attorney Silas Blake Axtell of New York:

Editor, The Seamen's Journal:

Please continue to send copies of the Seamen's Journal to John Campbell and other witnesses in the case of United States v. Pedersen, late master of the Barkentine "Puako," to 54 Ludlow Street, care of U. S. Marshal, New York City.

I am arranging an automobile ride for them this week. I am getting a bus that holds about 20 men, so that there will be plenty of room for them and their escorts, the U. S. Deputy Marshals, who will have to go along.

Your editorials on this case are inspiring to these men, and I hope you will keep it up until the trial is over. I will send you "dope" on the matter as fast as I get it.

I saw all these men Saturday and took down their claims. They retained me to bring actions against the owner of the bark or the bark itself for damages for personal injuries, suffered by reason of the neglect of the master to give them treatment for bruises, cuts and wounds after the master and his sons had inflicted the same upon them. Three of these men were kept in the pump hole, and water pumped on them; they were beaten with a heavy strap or rope for hours, in an effort to make them sign a false statement as to the disappearance of Axel Hansen and the chief steward.

The men were deliberately beaten, pounded, kicked and clubbed. There are only one or two of them who did not bear scars and marks of their handling by Pedersen and his sons. The latter, who are now on trial for their lives, were armed with a shot gun, pistol and a short revolver all the time. In addition, they carried brass knuckles, two or three lead blackjacks and some loaded wooden clubs. With these they laid open scalps, broke shins, knocked out teeth, and inflicted hurts and torture to other parts of the seamen's bodies. Every man was beaten into a state of abject submission; the men were ordered into dangerous position in the rigging, and while the wind was blowing hard, evidently in an attempt to cause them to fall overboard. Most of this cruelty occurred a few days before reaching Capetown, where the Captain no doubt thought he could engage a new crew at lower wages.

Hell-Fire Pedersen appears to have been a fiend incarnate; he may be insane, but, according to the story told by the carpenter who had been aboard his ship for six or seven years, his murderous insanity is of a consistent kind, intended to benefit Pedersen financially; and during that time he has prosecuted the business and ably represented the ship's interests as well as his own.

Will not the Seamen's Journal endeavor to locate, as soon as possible, shipping masters or seamen who know the reputation of Hell-Fire Pedersen, who can come to New York to testify at this trial? Their expenses, to be sure, will be paid by the Government. It is possible that he may put his "good" reputation in evidence; and in the event he does, the Government should be ready to prove what his real character is. Now is the chance for the seamen and the Seamen's Union and the Journal to help.

The men further told me that the Chief Steward and Axel Hansen were the only members of seamen's labor organizations on the ship. As a matter of fact, the Captain went to Seattle, advertised that he wanted men for Manila at $95 a month; then he picked the seamen, some of them young boys who had never been to sea before, and told them he had a fine ship, and would treat them like a father. One of the men who had been an iron worker, said: "He talked so nice that butter would melt in his mouth, until he got us aboard the ship, and he anchored up." Then he sailed for Capetown. To most of the men he promised $75 a month; he made them sign off for $40 or $60. With the exception of the two men who were killed, one driven to suicide—the cook, a man by the name of Stewart, an American, a mild tempered, obedient, God-fearing sailor, who never raised his hand in opposition, but who was constantly beaten, harassed and prodded until he was driven to utter distraction and madness (the story of his treatment on board and his final plunge over the side, witnessed by the crew, is one of the saddest episodes I have ever heard)—and the other Axel Hansen, who was being beaten by one of the mates at the time he went over the side, and whose face was bleeding and his eyes were swollen shut from poundings received during the previous week, who, nevertheless, had been ordered aloft to do some dangerous work, and when he came down was beaten some more, and who, after he went overboard and had caught hold of the life line, begging for help, would have been saved by the crew who endeavored to help him, but was left to drown because Pedersen set upon and beat one of the

DIED.

Robert Muller, No. 1243, a native of Germany, age 46. Died at San Francisco, Cal., May 4, 1919.

David Thompson, No. 1137, a native of British Columbia, age 35. Died at Honolulu, T. H., May 2, 1919.

The Navy Department has transferred from the San Francisco Union plant of the Bethlehem Shipbuilding Corporation to an Eastern shipyard a contract for the construction of two scout cruisers to be built at a cost of $7,000,000 each, it was announced during the week. No reason for the transfer of the contracts was given. Each of the vessels will be equipped with engines capable of developing 130,000 horsepower and will have a speed of more than 35 knots.

OUR WASHINGTON LETTER.

(By Laurence Todd.)

Thomas F. Flaherty, Secretary-Treasurer of the National Federation of Postal Employes, is the happiest man in the American labor movement to-day. His seven years' fight against Albert Sidney Burleson, Postmaster General of the United States, is coming to a victorious end. Burleson, implacable enemy of organized labor, destroyer of morale and security and efficiency in the service, is apparently about to be removed from the Cabinet. Whether Burleson is removed, or resigns, or is left in the office until March, 1921, by the President, the American public now understands that Burleson is discredited and repudiated by the whole labor movement, by a vast majority of the Democratic party, and by the friends of common justice everywhere.

"They are just finding out what we have been trying to make known for the last seven years," said Flaherty this morning, as he looked up from a pile of editorials taken from big newspapers and political journals from all parts of the nation. "I believe that we are in sight of the end of Burlesonism. The Democratic National Committee is discovering that Burleson is a reckless autocrat, with the viewpoint, as I said in the Buffalo convention of November, 1917, 'of a seventeenth century feudal baron.'"

Just now, while the President is receiving messages from big Democrats of all factions, calling upon him to get rid of the man who has done so much to destroy the faith of labor in the Wilson administration, it is worth while to recall what has happened this week in connection with the telephone strike—the strike which brought public feeling against the Postmaster General to a climax.

The telephone strike has been won. The principle of collective bargaining is recognized, and the Department has been put on record as agreeing to meet the representatives of the union to discuss the hours and wages and shop conditions under which the workers in the telephone industry are to be employed.

At the beginning of the strike, Burleson ordered General Manager Driver of the New England telephone system to "maintain service" at any cost. That is to say, he was to employ strikebreakers. Driver advertised in the Boston papers, but did not secure many scabs. It was at that point that the Democratic politicians in Boston cabled to the President. Burleson then sent Assistant Postmaster General Koons to Boston. Some weeks earlier, Koons had been "unable" to see Miss Julia O'Connor, leader of the organized telephone operators, when she waited in his outer office in Washington to discuss the girls' grievances with him. This time he was not only able but very glad to see Miss O'Connor, across the conference table, and to sign on the dotted line when she handed him the terms upon which the strike would be settled.

If Burleson had been able to break this telephone strike, he might have been more popular with certain of our big newspapers. But since he was beaten, and by a trade union girl at that, his political backers in States as distant as Texas and Georgia saw that the jig was up, and the editors found other reasons for joining in the demand that he must go.

While Democrats are rejoicing, and Republican campaign managers are regretting, that the Burleson issue is not to be brought into the campaign of next year, the officers of the Federation of Postal Employees are asking whether they cannot be safeguarded against the coming of another dictator in his place, either this year or in 1921. In this connection there is a revival of the talk of a year ago that David J. Lewis may be named as Postmaster General for the remainder of this administration. Lewis was formerly a coal miner, was chairman of the Labor Committee in the House, and is moderately friendly to the labor movement. He is not disposed to favor a rapid increase in salaries. but he is committed to the idea of collective bargaining.

Government relations with organized labor are to be one of the chief topics of discussion at the Latin-American Socialist and Labor Conference at Buenos Aires next week. As our State Department has refused to grant a passport to the American Socialist delegate, Dan Hogan of Arkansas, and as the American Federation of Labor has ignored the invitation, the only representation from this country will be in the form of a message of greeting from the Pan-American Federation of Labor, whose offices are in the A. F. of L. building. The Buenos Aires conference seeks to establish and increase the power of the organized workers, through both political and industrial effort, in controlling the governmental policies of the nineteen republics of Latin-America. Since the United States and Caada will have no delegates present, the proceedings will be directed by the Socialist leadership of Argentina, Uruguay, Yucatan, and Peru.

These Latin-American labor organizations share the revolutionary character of the labor movement in Italy and Spain. It would not be surprising, in view of the remarkable strike which has tied up the port of Buenos Aires for nearly four months past, if the conference were to adopt a program which would call for nationalization of the chief industries, including transportation, in Latin America, and would pledge an international general strike to force this issue.

The connection between the Italian and Japanese efforts to break down the program of the Paris Peace Conference, and the program of Italian and Japanese organized labor, has been carefully ignored by most of the newspaper correspondents in Paris. Both the Italian and the Japanese governments are afraid of the growing power of the workers. Both have decided that only by annexing some foreign territory can they stir up any further public enthusiasm for the war game. If they fail to bring home any territorial loot, then the unrest of their workers becomes more dangerous than ever before. Italy is declared by most competent observers to be on the verge of social revolution; only the fear of the labor leaders that the Allies might cut off her food and coal supply has prevented an uprising thus far. Before these lines are in print the monarchy may be fighting for its life against an uprising in Milan, Turin, Rome and other cities. For the people realize that the Italian government cannot hold the city of Fiume and the Dalmatian Islands except by keeping up a big army and navy, and that will mean heavier burdens upon the workers.

Japan has thus far stamped out all attempts at the formation of a strong trade-union movement within her empire. As a result, we have seen the rice riots of the past year, and now comes the revolutionary movement in Japan and the great revolutionary strike throughout Korea. The 20,000,000 Koreans, who are being treated by the Japanese military autocrats as the Russian Czar used to treat the Poles and Jews, and as the Turks treated the Armenians, are refusing to work. This strike may have a serious effect on the coolie situation. It may arouse the coolie to fight for economic liberty.

Italian workers in this country declare that the co-operative movement is going to play an important part in the new Italy that they expect to come from the collapse of the monarchy. In the Italian co-operative movement thousands of men and women have been trained for taking the more active control of industry which is the first of their demands.

From Everett, Washington, I have received a copy of a resolution adopted recently by Local 81 of the Amalgamated Meat Cutters and Butcher Workmen of North America, calling for the establishment by the membership of the American Federation of Labor of a co-operative woolen mill, as a means of securing clothing for the wage workers at a reasonable cost. It proposes an assessment of a dollar per member, to be levied for this purpose by each international union upon its membership. The woolen mill is either to be built or purchased, as may be found best.

The resolution was called to my notice because of the attempt being made in the East to bring the workers in the woolen and cotton and silk mills into the same industrial organization with clothing workers. The secretary of Local 81 suggests that if organized labor will finance its own clothing industry on a co-operative basis it will be started on the road to settle all industrial organization problems.

It may be taken for granted that the Atlantic City convention in June will not vote to undertake any particular co-operative enterprise; on the other hand, the convention will probably take some action to stimulate the formation of co-operative buying and manufacturing concerns in all parts of the country.

News from Pittsburg is to the effect that the steel companies are trying to get rid of all union men before the big organization convention summoned for May 25 by the National Committee for Organizing Iron and Steel Workers. The repressive tactics are not so successful as in the days before the war. Chairman Foster of the committee expects to have a big hall filled with delegates from the various steel mills in Ohio, Pennsylvania, southern New York and New Jersey. The convention will make industrial history.

In every great epoch there is some one idea at work which is more powerful than any other, and which shapes the events of the time and determines their ultimate issues. —Buckle.

Demand the union label upon all purchases!

THE SEAFARERS' CONFERENCE.

(Continued from Page 2.)

against which the representation or complaint is made."

Article XXVI.

The commission of enquiry shall be constituted in accordance with the following provisions:

"Each of the high contracting parties agrees to nominate within six months of the date on which this Convention comes into force, three persons of industrial experience, of whom one shall be a representative of employers, one a representative of workpeople, and one a person of independent standing, who shall together form a panel from which the members of the commission of enquiry shall be drawn.

"The qualifications of the persons so nominated shall be subject to scrutiny by the governing body, which may by two-thirds of the votes cast by the members present refuse to accept the nomination of any person whose qualifications do not in its opinion comply with the requirements of the present article.

Upon the application of the governing body, the Secretary-General of the League of Nations shall nominate three persons, one from each section of this panel, to constitute the commission of enquiry, and shall designate one of them as the President of the Commission. None of these three persons shall be a person nominated to the panel by any state directly concerned in the complaint."

Article XXVII.

"The high contracting parties agree that, in the event of the reference of a complaint to a commission of enquiry under Article 25, they will each, whether directly concerned in the complaint or not, place at the disposal of the commission all the information in their possession which bears upon the subject-matter of the complaint."

Article XXVIII.

"When the commission of enquiry has fully considered the complaint, it shall prepare a report embodying its findings on all questions of fact relevant to determining the issue between the parties and containing such recommendations as it may think proper as to the steps which should be taken to meet the complaint and the time within which they should be taken.

"It shall also indicate in this report the measures, if any, of an economic character against a defaulting state which it considers to be appropriate, and which it considers all other states would be justified in adopting."

Article XXIX.

"The Secretary-General of the League of Nations shall communicate the report of the commission of enquiry to each of the states concerned in the complaint, and shall cause it to be published.

"Each of these states shall within one month inform the Secretary-General of the League of Nations whether or not it accepts the recommendations contained in the report of the commission; and if not, whether it proposes to refer the complaint to the permanent Court of International Justice of the League of Nations."

Article XXX.

"In event of any of the high contracting parties failing to take within the specified period the action required by Article 19, any other of the high contracting parties shall be entitled to refer the matter to the Permanent Court of International Justice."

Article XXXI.

"The decision of the Permanent Court of International Justice to which a complaint has been referred shall be final."

Article XXXII.

"The Permanent Court of International Justice may affirm, vary or reverse any of the findings or recommendations of the commission of enquiry, if any, and shall, in its decision indicate the measures, if any, of an economic character against a defaulting state which it considers to be appropriate, and which other states would be justified in adopting."

Article XXXIII.

"In the event of any state failing to carry out within the time specified the recommendations, if any, contained in the report of the commission of enquiry, or in the decision of the Permanent Court of International Justice, as the case may be, any other state may take against that state the measures of an economic character indicated in the report of the commission or in the decision of the Court as appropriate to the case."

Article XXXIV.

"The defaulting state may at any time inform the governing body that it has taken the steps necessary to comply with the recommendations of the commission of enquiry or in the decision of the Permanent Court of International Justice, as the case may be, and may request it to apply to the Secretary-General of the League to constitute a commission of enquiry to verify its contention. In this case the provisions of Articles 26, 27, 28, 29, 31 and 32 shall apply, and if the report of the commission of enquiry or decision of the Permanent Court of International Justice is in favor of the defaulting state, the other states shall forthwith discontinue the measures of an economic character that they have taken against the defaulting state."

From Chapter III insert the following:

Chapter III (General.)

Article XXXV.

"The British Dominions and India shall have the same rights and obligations under this Convention as if they were separate high contracting parties.

"The same shall apply to any colony or possession of any of the high contracting parties which on the application of such high contracting party is recognized as fully self-governing by the Executive Council of the League of Nations.

"Convention adopted in pursuance of the provisions of this Convention shall not be applicable to a colony, protectorate or possession which is not fully self-governing of any of the high contracting parties, unless the high contracting party concerned expressly decides that the Convention shall apply. Each of the high contracting parties engages to consider the application of such conventions to those of its colonies, possessions or protectorates which are not fully self-governing."

Upon the foregoing we prepared the following comments, which we submitted to Mr. Robinson, nautical adviser to the United States Peace Commission and a member of the Commission on International Labor Legislation, and also to President Gompers and Major Berry—George Berry, President of the International Organization of Pressmen of America—who laid it before Colonel House.

Comment on the Proposed Constitution of the Commission on International Labor Legislation Submitted by the Delegation from the Seamen.

"We have had but very short time in which to consider the draft. It appears to us to be in the form of a treaty which, if accepted by the United States Senate, necessarily becomes part of the Supreme Law of the United States.

"If each nation as such has two delegates, the employers of each nation one delegate and the working people of each nation one delegate, the votes may be one for the workers, three against them. If each nation as such has one delegate, it may be two to one.

Power.

"(Article III.)

"The power seems to be derived from Article 20 of the Covenant, and to be enforced under Articles 12, 16 and 17 of the Covenant. The power seems to be a blanket power, destroying in effect the legislative power of any and all States with which the membership of the League of Nations or any individual member thereof has commercial or industrial relations.

Procedure.

"Before the working people of any nation can get anything on the Agenda, it must have (1st) the consent of its own nation; 2nd, the consent of the Governing Body.

"(Article XIV.)

"Any question may be placed on the Agenda upon the motion of any one nation, and by a two-thirds vote may be forced to consideration and decision, notwithstanding any protest from the working people most interested made to their own government.

"(The Seamen's Act seems likely to be disposed of in reasonable time, the machinery is in order.)

"Most of the business of the Conference will be decided by a majority vote, 3 to 1, or 2 to 1, of all the delegates, will determine the most intimate daily industrial life of the workers of any nation or of all nations, unless there be a national protest, in which case two-thirds majority will rule. (Article 19.)

"(All protests by the workers are overridden and the workers shackled hands and feet.)

"It seems that the final decision arrived at by the Conference and endorsed by the governing body is by this draft promised ratification before it is considered. The competent authority may refuse ratification, but will in that case stand as pledge breakers before the world, and is subject to isolation. (Article 21.)

"If by chance some decision favorable to the working people has been adopted and ratified, but is not complied with, the penalty upon the nation so failing may be, at the discretion of the governing body, an appeal to public opinion. (Article 24.)

"A nation defaulting in its obligations under this proposed treaty may, upon the recommendation of a commission of inquiry, be subject to an economic boycott. (Articles 28 and 32.)

General.

"The self-governing colonies of Great Britain seem to be endowed separately with the same representation as the United States. It would appear as a consequence that the British Empire as such enters the Conference with a very large number of votes in excess of that of any other nation. The British Empire, through its several delegates and its influence and power of other nations, appears to be out in a position of determining the lives to be led by the working people of the world.

"(Is it perhaps true, as was stated some years ago by a noted European writer, that the purpose of the commercial class would be, 1st, to destroy the remaining power of the historic upper class; 2nd, to so burden and shackle the working class of the world that the commercial class would in fact be the heir to the political power held by the castles and the industrial power held by the guilds in the Middle Ages?)

"It is not conceivable that the President of the United States had in view any such purposes as these—disclosed in the draft—when he consented to the insertion of Article 20 in the Covenant.

"On behalf of the International Seamen's Union of America, we respectfully protest against the whole draft and fervently pray that God in His mercy may save the working people of the world, the working people of the United States, but more especially the seamen.

"If we might suggest something, we would beg tentatively to propose that an International Labor Bureau be instructed to collect information to be collated under supervision of the governing body. Let it be submitted to a yearly conference to make their recommendations to the several nations, there to be dealt with as might be thought wise under pressure of public opinion. Let the facts be obtained and the recommendations be advisory, leaving to each nation its sovereignty and to each nation's work people their hope and possible power of influencing their own legislative authorities without waiting the pleasure of the most backward of nations. Let it try to lift the lowest instead of depressing the highest."

We had these comments translated into French and Scandinavian and gave the paper to the French delegation to our Seamen's Conference here in Paris.

(To be Continued.)

WANTED—WITNESSES.

(Continued from Page 7.)

seamen who went to turn the wheel, and deliberately turned the ship away and sailed away—these two men were the only union men on the ship. According to the stories of the crew this is not the first murder to be charged against Pedersen. He seems to have emulated Wolf Larsen of Jack London's story "The Sea Wolf."

Very truly yours,
SILAS B. AXTELL.

New York, April 30, 1919.

Labor's Economic Platform

Following is the Economic Platform adopted by the American Federation of Labor:

1. The abolition of all forms of involuntary servitude, except as a punishment for crime
2. Free schools, free text books and compulsory education.
3. Unrelenting protest against the issuance and abuse of injunction process in labor disputes.
4. A work day of not more than eight hours in the twenty-four hour day.
5. A strict recognition of not over eight hours per day on all Federal, State or municipal work, and not less than the prevailing per diem wage rate of the class of employment in the vicinity where the work is performed.
6. Release from employment one day in seven.
7. The abolition of the contract system on public work.
8. The municipal ownership of public utilities.
9. The abolition of the sweat-shop system.
10. Sanitary inspection of factory, workshop, mine and home.
11. Liability of employers for injury to body or loss of life.
12. The nationalization of telegraph and telephone.
13. The passage of anti-child labor laws in States where they do not exist and rigid defense of them where they have been enacted into law.
14. Woman suffrage co-equal with man-suffrage.
15. Suitable and plentiful playgrounds for children in all cities.
16. The Initiative and Referendum and the Imperative Mandate and Right of Recall.
17. Continued agitation for the public bath system in all cities.
18. Qualification in permits to build of all cities and towns, that there shall be bathrooms and bathroom attachments in all houses or compartments used for habitation.
19. We favor a system of finance whereby money shall be issued exclusively by the Government, with such regulations and restrictions as will protect it from manipulation by the banking interests for their own private gain.

WEEKLY NEWS LETTER.

(Continued from Page 3.)

with successful results, but special studies are necessary to overcome, let us not say a careless spirit, but rather an ignorance of the propositon and a tendency which exists in large measure in most men to gamble their personal chances against the law of averages."

U. S. Revenue Bureau to Enforce Law.

The Internal Revenue Bureau of the Treasury Department has issued regulations putting into effect the 10 per cent. tax on net profits of any concern employing children under the age of 14 years. Mines and quarries must pay a 10 per cent. tax if children under 16 years are employed.

The Department of Labor which enforced the Keating Child Labor law before it was declared unconstiutional by the United States Supreme Court, is elminiated as an enforcing factor of the new law.

This was made possible when the Revenue Act, of which the Child Labor law is an amendment, went to conference at the last Congress.

The Senate had adopted a provision that appropriated money to enable the Department of Labor to make inspections and to fulfill such other duties as may be assigned to the Secretary of Labor to carry into effect, in co-operation with the Commissioner of Internal Revenue, the provisions of the Child Labor amendment.

When this amendment came out of conference the words "in co-operation with the Commissioner of Internal Revenue" were changed to read "upon the request of the Commissioner of Internal Revenue."

As the law stands, the Department of Labor can not make inspections or carry on a rigid campaign to enforce the law until a request is made by the Commissioner of Internal Revenue.

The manner in which the Internal Revenue Bureau will handle this social evil is indicated by the following statement issued by the bureau:

"While it is the purpose of the Bureau of Internal Revenue strictly to enforce the law, its aim is to administer its provisions in a way to cause as little inconvenience as possible to the business world and to offer no injustice to employes."

Boston Phone Girls Force Wage Advance.

Telephone girls in Boston and vicinity have won a six-days' strike for higher wages and against the "postponing" policy of the Postoffice Department in the adjustment of grievances. A general wage advance has been secured, and will total $3 a week where girls have been employed seven years and over. This class will now receive $19; they asked for $22. The new schedule dates back to December 31, when the old scale expired.

Electrical workers who joined the strike have been increased 50 cents a day in Boston and 62½ cents a day outside of Boston. This establishes a uniform rate for these workers.

First Assistant Postmaster General Koons represented Postmaster General Burleson while the strike was on, and local trade unionists are marveling at the rapidity with which he "looked up the finances of the company." The postal official was quoted in the daily press that this was necessary first. With several thousand girls on strike and the system tied up throughout New England, Mr. Koons' investigation seems to have been both quick and thorough.

Step-at-a-Time Plan.

In an editorial on the trade union movement the Baltimore Sun prints a good illustration of organized labor's policy, which was contemptuously referred to a few years ago as a step-at-a-time plan by so-called revolutionists. The Sun says:

"Forty or fifty years ago a chess player by the name of Steinitz invented what is known as the modern style of chess play. Its chief characteristic was what he called 'the accumulation of small advantages.'

"The old chess masters staked success on bold and reckless strokes. More often than not they came to grief. Steinitz moved prudently, cautiously, gaining a small advantage here and another there, and finally winning out through the accumulation of these trifling advantages. The Steinitz method has driven out the old method among first-class players. It is the style that wins.

"The Federation of Labor, in the three decades during which Mr. Gompers has been its leading figure, has played the game of labor advancement in this way. It has striven to get a reduction in the hours of labor here, an increase of wages there, better working conditions in this place or that. It has resolutely put out of mind all dreams of the achievement of the millennium overnight and kept its mind always on the next step in advance."

AMERICAN CITIZENSHIP.

(By Henry A. McAnarney.)

The road to the schoolhouse is the route to progress. Education is the terminal. Candidates for citizenship have had the road opened to them. The training that the elementary schools can give is within their reach. Opportunity to benefit by that education is brought to their doors.

By an act of Congress, May 15, 1918, the Bureau of Naturalization, United States Department of Labor, is directed to promote instructon in citizenship and to send to the public schools the names of candidates. The law authorizes the free distribution of textbooks to those candidates who are in attendance upon citizenship classes. Thus the Government of the United States has undertaken to acquaint the alien resident with a knowledge of his own interests.

Congress, by its enactment, has put this advancement within reach and the beneficence of the law itself makes it a matter of pride and self-interest for each community to make the purpose of the law operative.

There is one sure way to get to the noncitizens. The first step is to approach them at their place of work and in the organizations of which they are members.

The next is to get them enrolled in the citizenship classes in the local public schools. The Bureau of Naturalization has arranged for such classes in 2100 cities, towns, and communities, and is daily extending its list of co-operating schools. Most likely, there is such a school in your locality. If there is none, it will be provided when a group of candidates is recorded.

Members of labor organizations know the benefits of citizenship. Who better than they can impress upon the foreign-born the advantages to them, to industry, and to all the workers in industry when every worker is a citizen, speaking our language, or a candidate for citizenship learning our language and taking the viewpoint of Americans? It will make our country more prosperous and united. It will make every city, almost every industrial community, brighter, healthier and happier because it will raise the general standard of intelligence, and thus will add to a new measure of political, social and industrial safety for all the people.

"OU KLEPTO TEN NIKEN"

—Alexander the Great said it when he was urged to surprise Darius, the Persian King, in a night attack.

It means, "I will not steal the victory."

Say it aloud in Greek.

Then, if you have sufficient funds to pay the first instalment, buy Victory Bonds; for remember, the man who quits in this Victory Loan is stealing victory—stealing victory bought with the blood of Americans.

He is a "rotten sport." That, to be sure, is not an elegant expression and probably there is no Greek for it, but it is accurately descriptive.

The more a fellow writes about this Victory Loan, the more disgusted he is to think that it is necessary to urge Americans to lend their money to pay for victory. What the devil can a man who calls himself American be thinking about when he says, "I can't afford it," or "The war is over," or the seventy-seven other lame-duck excuses one hears? Hasn't he got any self-respect?

The simple announcement that there is a Victory Liberty Loan, why it is necessary, and what the rate of interest is, should be all that is necessary to put the Loan over.

There is only one class of Americans who have a right to pass up America and the Victory Loan. They are dead.

Let's cut out all this pin-headed excuse-making and take our share of victory.

"Many have given all forever. Those of us who have the funds are only asked to loan for a while."

What is the attitude toward labor of the great press associations, of the powerful newspapers, of the wealthy magazines that furnish nine-tenths of the reading matter regularly absorbed by the people? Their attitude is one of hypocritical congratulation so long as labor is content to accept its position as a lower class, as a slave class, as a submissively exploited class; of superior contempt when labor begins to assert its right to be free industrially, to be relieved from exploitation, to take its rightful place in the social scheme; of malicious and open enmity when labor actually rises in protest against its subjection. Why should labor contribute a penny to the support of mediums of opinion and misinformation so obviously and completely enslaved by anti-labor prejudice and ruling class interests?—Ex.

POST-WAR REFLECTIONS.

(By W. B. Rubin.)

Power tends toward autocracy.

Autocracy and democracy cannot dwell side by side any more than can a cat and a canary. One of the two must be caged. If you cage the cat and not the canary, the canary will fly away, but if you cage the canary, the cat will stay around, hoping that in an unguarded moment the bird will become her prey. So, if you let democracy go unlicensed, it may lead to Bolshevism, while if you hem it in, autocracy will hover about, hoping some day to swallow it up.

Militarism is the very marrow of autocracy.

A soldier is merely a cog in the machine of autocracy. A democracy, like any other nation, needs policing and protection. But a standing army beyond that is a threatening menace to its democracy and leans toward autocracy.

The boys and men who laid down their tasks to go "over there" for Uncle Sam and Democracy soon learned that they were there only "to do and die."

Generals do not and cannot call for a referendum. Soldiers do not and cannot invoke the recall. There is and can be no election in the army. In war time, there is no time for debate. The general is not to be argued with and the soldier is not to be argued for. The whole scheme of war and army is autocratic.

The war, in the interest of expedition, necessitated the delegation of power to certain individuals. How swiftly they assumed autocratic power! Perhaps it was necessary to suspend Democracy and give autocratic power to some individuals in order that Democracy might be saved.

In some departments of civil life, in civic affairs, the power exercised has been so undemocratic and the persons wielding that power have become so autocratic that we often tremble with fear at the consequences yet to follow. What if our Democracy should fall? No matter how benevolent the autocrat who either assumed or was given such power, if that power be uncurbed, unchecked, however weak or democratically exercised in its inception, however well intended at first, it moves inevitably toward the making of an autocrat out of the person invested with power.

When France nationalized her railroads, this was hailed by the workmen with joy. Briand was the chief advocate of labor's rights, but in time of labor's contention, he became another Briand. Briand without power was the fighting champion for the working classes; Briand with power became the autocrat, oppressing labor.

Governmental control of railroads, telegraphs, and telephones, too, has developed autocrats in this country.

The excuse of war is no longer here. The reason for haste no longer exists and the members of the Cabinet who have been assigned to extra cabinet duties should now be shorn of the autocratic powers that they have created out of such duties. Perhaps it was necessary to confer autocratic power to save Democracy, but now it is just as necessary to take away that autocratic power to save Democracy.

Germany had too much efficiency. Efficiency has its place in every business save the business of democracy.

We who live for the morrow, as well as for the day, and we who strive to maintain our Democracy and who love it with all its faults more than we would the best autocracy, must not let even a single administrative or departmental branch of government take further hold. There must be rescission, not accession, of power.

President and cabinet officers, peace envoys, Senators and Congressmen, judges and police, if the thunders of war drive you in fear from listening in the open to the voice of Democracy, do heed that voice in the sunshine of peace.

The war is over. Soldiers are returning. There is no further need of straining, bending, or squinting at old fashioned constitutional rights.

In peace time, there is no room for espionage laws. The rights of men must be preserved. Autocracy must not overtake America and Americans, their Constitution and free government.

Whatever may have been your duty during the war, now it is your duty to begin, as fast as you know how, to rid this nation of all semblance of autocracy, manifested and exercised in the war.

Make full headway for the complete Democracy of these United States.

GOVERNMENT OWNERSHIP.

Senator Hiram W. Johnson, of California, says the railroads must never return to private ownership. The following expression of his views is from his contribution to a symposium of answers to the question, "What Should the New Congress Do?" in Everybody's for March:

"We have paid the price of private ownership. We have paid the price of private ownership in millions of acres of our best farm lands. We have paid the price in our forests, in our coal deposits, our lands gushing with oil. We have paid the price in building up overnight fabulous fortunes, used for the undoing of the State. We have paid the price in handicapping our own people, in distorting our public and our private economy, in corrupting our political life, and in tainting the very fountainhead of justice. We have paid the price of private ownership in this nation, and no matter what may be the attitude of any of us to-day, despite barriers or obstacles, the nation is marching straight to the goal of public ownership, and the people at last will come into their own.

"Volumes have been written in the past of the superiority of private management. The railroad propagandist has plastered the whole nation with demonstrations of the superiority of private efficiency. The question, though, has been decided. It is no longer academic. The pitiless logic of events has determined it. Private management and the boasted efficiency of private management could not do the job. They acknowledged defeat, and Government management succeeded. Two months ago I would have been prepared to meet, and to meet fully every argument presented in favor of the efficiency of private management as contrasted with the efficiency of Government management. But the question now is no longer debatable."

Labor News

The Boston Wood, Wire and Metal Lathers' Union No. 72 has prepared a new wage contract which calls for $1 an hour, instead of the present 75-cent rate.

The New Albany Electrical Workers employed by the United Gas and Electric Company suspended work to enforce a wage awarded by the National War Labor Board.

The Department of Labor has created the office of director of citizenship to teach American ideals to alien residents. Details of this educational work have not been developed.

The Seattle Teamsters' Union No. 174 has secured a new agreement with the Team Owners' Association, representing nearly 400 employers. Wages of 1,800 workers are raised 25 cents a day.

The Massachusetts Minimum Wage for Women employed as cleaners by private employers in office and other buildings, is now in effect. The regulation calls for 30 cents an hour for night work and 26 cents an hour for day work.

Officers of the Bakery and Confectionery Workers' International Union have sent an address to every affiliate urging that formal demand for abolition of night work be made when wage scales for the year are presented on May 1.

The Boston Painters and Decorators have secured wage increases. The new minimum for painters will be 82 1-2 cents an hour and 87 1-2 cents an hour for decorators. The work day will be eight hours for five days a week, making the work week 40 hours.

The National War Labor Board has ordered a wage advance of 10 per cent. to members of Brush Makers' Union No. 35, employed by the Chicago (Ill.) Brush Manufacturing Company. The award dates back to November 1, of last year and time and one-half shall be paid for overtime.

The Fresno Stereotypers and Electrotypers' Union No. 104 has signed a new wage scale with the newspaper publishers. Foremen are advanced to $6.50 for night work and $6.25 for day work; journeymen, $5.75 for night work and $5.66 2-3 for day work. The old scale was $5 for night and day foremen and $4.50 for night and day work done by journeymen.

Officers of the International Fur Workers' Union announce that the 44-hour week has been won in Boston, Chicago and Montreal. A prior statement announced the same condition in New York City. In Montreal, it is stated, the memory of the protracted strike in 1917 moved the employers to compose differences with employes. At one time a strike seemed imminent because of the employers' seeming determination to fight.

The Los Angeles Typographical Union No. 174 has signed a two-years' wage agreement with local newspaper and linotype shop proprietors. Wages are increased $4 a week the first year and an additional 50 cents a week will be paid the second year. The agreement is retroactive and dates back to the first of the year. The union has been conducting negotiations for four months, but because of the retroactive feature of the contract the printers lose nothing by the long-drawn-out negotiations.

INFORMATION WANTED.

Relatives of Axel Hansen, the seaman for whose murder Capt. Pedersen, or "Hell-Fire Pedersen" of the bark "Puako," is to be tried May 15, at New York City, please communicate with the undersigned. Any seaman knowing aught of Hansen or his relatives, please write. The names and addresses of one or two witnesses who have known for some time past Capt. Pedersen's reputation, the way he is reputed to have handled his men on board ship, are also desired to communicate with the undersigned. Silas B. Axtell, 1 Broadway, New York City.

For the benefit of the widow of John Karus, lost at sea, October 17, 1918, at 2:15 a. m., according to the report in the official log of the barkentine "Aurora," will all members of the crew of that vessel who know anything about the ship, the condition of her rigging, before and after the accident, or anything that will tend to explain his disappearance, communicate with the undersigned attorney for the widow?—Silas Blake Axtell, No. 1 Broadway, New York City. 1-1-19

The following men: August Rosso, oiler; Robert Anser, oiler, and V. Florio, wiper, who were employed on the S. S. "Comet," on or about November 22nd, 1917, when John Olsen was injured through the leaking of a gland which caused his hand to get tangled up in the motor, whereby he sustained severe and permanent injuries, will please communicate with me without delay. They may furnish valuable evidence to assist Olsen in his suit against the Standard Transportation Company. His injuries are very serious. S. B. Axtell, 1 Broadway, New York City.

Members of the crew of the SS. "Munrio" who were on board said vessel at the time she salved the SS. "Curytibia" in the month of January, 1918, and who have not yet received their full share of the salvage award, will kindly communicate with or call on Silas B. Axtell, 1 Broadway, New York City. 10-23-18

The salvage case of S. S. "Princeton" which salvaged the S. S. "Ardmore," both vessels owned by Standard Oil Company of New Jersey, has been tried and resulted in an award of $7,500 to the crew. This amount has been received, and members of the crew of S. S. "Princeton" are requested to call for same at the offices of Mr. Axtell, One Broadway, New York, N. Y.

Members of the crew of the S. S. "Fred W. Whellen" who were on board November 11, 1918, when she picked up the bark "Galica" should file their claims with this office and be joined in libel which is being filed by the undersigned on behalf of the members of the crew. Silas B. Axtell, 1 Broadway, New York City. 12-25-18

Anyone knowing the whereabouts of Woodley Ransome and Charles Bland, who were members of the tug "Virginian" when she was damaged by the "Navy Tug No. 4," will kindly communicate with Arthur Jones, Agent, Marine Firemen's, Oilers' and Watertenders' Union, 513 Main St., Norfolk, Va. 11-6-18

Charles L. Carlsen, No. 1834, who disappeared from the barge "Isaac Reed" at Eureka, California, on December 31, 1918, is inquired for by his wife, Mrs. C. L. Carlsen, 107 Courtland Ave., San Francisco, Cal. 2-5-19

Members of the crew of the S. S. "Argonaut," who assisted in the salvage services to the S. S. "Jason," at the time she was in distress off the coast of Florida, on or about January 1st, 1918, will kindly call or communicate with the undersigned who is representing most of the officers and crew of the S. S. "Argonaut." Silas B. Axtell, One Broadway, New York City.

Ellis R. Nelson, last heard from at New Orleans, La., Nov., 1916, when on board U. S. C. G. S. S. "Davy," is inquired for by his mother. Anyone knowing his whereabouts will kindly communicate with R. J. Nelson, 59 Clay St., San Francisco, Cal. 11-6-18

Carl Hansen, a native of Soon, Norway, age 35, formerly a member of the Lake Seamen's Union, is inquired for by his mother, Marn Hansen, 778 Sixth Ave., Milwaukee, Wis. 8-17-18

You Want the Truth

This year there will be stirring times in the Nation. Under government censorship it is increasingly difficult for the average man to get the real meaning of the social and political movements of the day.

LA FOLLETTE'S MAGAZINE

will be specially represented at Washington and will analyze and present the news from the capital truthfully and fairly. Senator La Follette is making a real fight to lift some of the tax burdens from the common people and place them where they belong — on excess profits, war profits and surplus fortunes and incomes. Because of this he is being attacked more bitterly than any other man in public life.

Send in your order today.

$1.00 Per Year—Agents Wanted

La Follette's Magazine, Madison, Wis.

Home News

Deposits and resources of national banks outside of New York city on March 4 were the greatest ever reported and were notably large in country banks.

Unfinished housing projects, undertaken during the war by the Government to relieve congestion in several industrial centers will be completed before the end of this month.

The Bangor Historical Society has just come into possession of an iron kettle which came to America in the "Mayflower," the utensil belonging to Governor William Bradford of Massachusetts.

American dairy cattle are to be sent to devastated districts of France where they will do their "bit" toward restoring the health of children. More than 100 head will leave New York shortly.

Unless pardoned by President Wilson, Eugene V. Debs, Socialist leader, probably will begin serving in the penitentiary at Moundsville, W. Va., his ten-year sentence for violating the espionage act about May 1.

Mexican border passport regulations are practically suspended in a zone forty miles south of the border. Hereafter bona fide citizens of the United States may obtain permits to cross the border on verbal application.

Cable messages for inhabitants of German territories on the left bank of the Rhine occupied by the allied forces will be accepted at the sender's risk. Messages to members of the occupying forces are restricted to personal and domestic affairs.

Continuing decline during March of deaths from influenza throughout the country is noted in the Census Bureau's weekly health report. The deaths from influenza for each of the four weeks ending March 29 were, respectively, 946, 932, 737 and 655.

Recruiting by airplane is to be adopted as part of "a whirlwind campaign" by the Army for enlisting its new peace forces. From air service stations throughout the country aviators will shortly swoop down on anything that looks like a town and convert young men to the desirability of any Army career.

A course of action intended to prevent foreigners leaving the country with income taxes unpaid has been arranged by the Treasury and State departments. Before an alien can obtain a passport, he has to produce either a receipt for his income tax, in full to date, or an official statement that no tax is due.

The internal revenue bureau has begun to comb the country for income tax dodgers. Commissioner Roper sent instructions to all collectors urging them to gather from all employers of labor the names and addresses of persons in their employ who were paid more than $1,000 last year. This information must be in the hands of collectors by May 15.

Secretary of War Baker is in "hearty concurrence" with suggestions made by Lieut. Col. S. T. Ansell, regarding changes in the court-martial system, if the present laws prove to be defective, a letter from Adjutant General Harris to Colonel Ansell said. Disagrements between Ansell and Judge Advocate General Crowder were regretted by Baker. He declared, the letter said, that Crowder had not begun the "personal comment" indulged in.

Domestic and Naval

A Shipping Board announcement states that the American Merchant Marine now represents nearly one-fifth of the entire sea-going tonnage of the world, and comprises 46 per cent. of all ships clearing from the United States ports, as compared with 9.7 per cent. prior to the commencement of the war in 1914.

A new navigation company named "Lloyd Latino" has been formed at Genoa with a capital of Lire 1,000,000 entirely paid up. The new company has been constituted by French and Italian capitalists and on the French side the subscription has been taken up by the Societe Generale de Transports Maritimes a Vapeur.

In pursuance of its policy of expansion to meet the demands of peace-time passenger and freight traffic the Cunard Steamship Company, Ltd., has made arrangements for an office in the port of Antwerp, Belgium. The office is situated in Hansa House, with entrance from the Canal aux Sucres and also from the Quai Van Dyck.

One hundred and fifty-one U. S. Shipping Board vessels, representing a tonnage of 950,000 deadweight tons are now plying the Atlantic and Pacific with food supplies for the starving lands. Based on reports received up to April 1, the Board announced this is an increase of 150,000 deadweight tons over ships in service on March 1, and an increase of 600 tons over December 1, 1918.

The British Government have entered into an agreement with Norwegian owners to grant facilities for (1) the building of 35 ships of about 50,000 gross tons to replace vessels lost while under requisition by the British Government, and (2) for the laying down of about 260,000 gross tons in each of the three years after the cessation of hostilities. This agreement is in return for extremely valuable financial and tonnage assistance rendered to Great Britain during the war.

Rear-Admiral Clarence S. Williams has been detached from command of Division No. 1 of the Pacific Fleet and ordered to the Naval War College at Newport, R. I., as chief of staff. Naval orders published also show that Captain Herbert G. Sparrow has been detached from the cruiser "Chicago" and assigned to duty at the War College. Captain D. W. Todd, who has been the chief cable censor at the Navy Department, has been assigned to command the armored cruiser "Pittsburg," formerly flagship of the Pacific fleet.

Ship production throughout the entire world in 1918 aggregated 5,447,444 gross tons, a figure never before approached. The total is 63 per cent. higher than the output of 1913, record pre-war year. The records compiled by Lloyd's Register show the production in the United States was 3,033,030 gross tons, a total greater than the entire output of the United States during the ten years, 1907-1916, three times greater than the 1917 record and 25 per cent. above the combined output of the rest of the world in 1918. Production in the United Kingdom was 1,348,120 tons; in Japan, 489,924 gross tons; in Canada, 258,191 tons.

News from Abroad

Every German town and city which had its own garrison, of which it has been proud for decades, has been officially notified by the National Assembly that it has been decided to disband the German army.

Norway, Sweden and Denmark are working through a co-operative conference to procure good and sound food for the people of the Scandinavian countries. The program of the conference will be submitted for approval to the governments of the three nations.

The British military representative has notified Dr. Otto Bauer, Foreign Minister of German Austria, that the British Government had authorized him to declare that if disorders occurred in German Austria, imports, including food and raw materials, would be stopped immediately and entirely.

A Hungarian Government wireless dispatch says, the Budapest authorities have opened the safe of the Hungarian Allgemeine Kredit Bank, containing the jewels of Joseph Hapsburg, Former Archduke Joseph, and his family including diadems, collars and diamonds valued at more than $810,400.

The League of Greek Refugees has sent a telegram to President Wilson and the allied Premiers at Paris, asking that the allied powers intervene in Asia Minor in behalf of the inhabitants of Northern Cappadocia, where thousands are dying from starvation. The territory is largely inhabited by Greeks.

In contravention of the Russo-Chinese treaty, which is now regarded as having lapsed, the Chinese Government has sent 500 Chinese troops to Urga and a similar number to Kiachta, and it is indicated that additional men may be sent later. The Russian legation has presented a note to the Government protesting against this dispatch of Chinese troops into Outer Mongolia.

The Swiss Government announces that it has given permission for former King Ludwig of Bavaria to reside at Ziers, in the Canton of Grisons, in a home for aged Catholic priests, which forms a wing of the ancient capital of Salist. The King has been living in Liechtenstein. Permission also has been granted to several former Austrian Archdukes to come to Switzerland on condition that they undertake to refrain from all political activity and propaganda.

Australia's total casualties during the war, with the figures brought up to February 8 of the current year, totaled 307,900, according to a statement made public by the Government of the Commonwealth. The total forces of Australia, raised by voluntary enlistment, numbered 400,000, out of a total population of less than 5,000,000. The casualties are divided as follows: Death, 58,035; missing, 193; prisoners, 430; wounded, 166,606; sick, 82,409, unspecified, 219.

Vickers, Limited, are about to start a transatlantic service with airships which the company was building for the British Navy when the armistice was signed and which are no longer needed, the Pall Mall Gazette says. The passenger rate will be £48 and mail will be carried at the rate of £405 a ton. The pioneer ship will have a gas capacity of 1,200,000 cubic feet and engines of one thousand horse-power. Larger ships are being designed to carry two hundred passengers.

With the Wits

Teacher—What do you know about Aladdin's lamp?

Willie Willis—If he's the new kid in the back row, I'm the guy that blacked it for him.—Judge.

"Brevity is the soul of wit," quoted the ready-made philosopher.

"Yes," replied Senator Sorghum, "but it's no good in a filibuster."—Washington Star.

Judge (to witness)—Why didn't you go to the help of the defendant in the fight?

Witness—I didn't know which was going to be the defendant.—Boston Trianscript.

"Tough guy, aint you?" "It's this way, pardner. Even when a baby the only rattle I ever had was one my ma got offen a rattlesnake."—Louisville Courier-Journal.

"Blithersby says some hard things about the capitalistic class." "That's true. But if a certain mining venture of Blithersby's had proved a success you couldn't have forced a socialistic word out of him with a crowbar."—Birmingham Age-Herald.

"I see where they are going to have a cat show in New York for the soldiers and sailors." "Well, the profits ought, of a show like that, to amount to a considerable purr-cent."—Baltimore American.

"I understand you have a number of the old masters in your gallery." "Gallery?" echoed Mr. Cumrox. "Nonsense! I've got 'em right down in the front row."—Washington Star.

"Just a minute, mister." "Yes?" "My wife is starving." "So's mine," responded the affable millionaire. "It's tough on the girls, but it's the only way to get a fashionable figure."—Louisville Courier-Journal.

Rastus (just back from the army)—Yessah. I dun had ten thousand dollars war insurance on mah life when Ah was in de war.

Sambo—Gwan, niggah! Ten thousand dollars jest on you! Why, ain't dat more'n the hull war cost?—Life.

"Why do you object to the League of Nations?" "On musical grounds. After singing 'My Country, 'Tis of Thee,' all these years I don't want the mental effort of changing to 'Our Countries, 'Tis of Those.'"—Washington Star.

"Do you read what the newspapers say about you?" "Every line," said Senator Sorghum. "A politician who doesn't read what the newspapers say about him stands no more chance than an actor who tries to make up without the aid of a looking glass."—Washington Star.

An Invitation

We invite deposits from every one—rich, poor, old and young. We recognize no classes, but treat large and small depositors with the same courtesy and consideration.

HUMBOLDT SAVINGS BANK

733 MARKET STREET, Near Fourth
SAN FRANCISCO

Taylor's Nautical Academy

Established 1888

Consular Building, Corner Washington and Battery Streets, Opposite New Custom House, San Francisco, Cal.

THIS OLD AND NOTEWORTHY SCHOOL is under the direct and personal supervision of CAPTAIN HENRY TAYLOR and equipped with all modern appliances to illustrate and teach any branch of Navigation.

The class of teachers of Navigation in the past have been those having simply a knowledge of Navigation, and Navigation only. Conditions have changed, and the American seamen demand a man as a teacher with higher attainments than one who has only the limited ability of a seaman. The Principal of this School, keeping this always in view, studied several years the Maritime Law, and is now, in addition to being a thorough teacher of Navigation and its kindred subjects, a regularly admitted Member of the Bar

There is no standard of education required of a pupil entering the School, for no matter how ignorant the seaman may be, even in the rudiments of common education, Captain Henry Taylor will teach and raise him from the depths of ignorance to the height of the average well-informed man, and in a comparatively short interval of time.

THE SEAMEN'S JOURNAL

FOR THE SEAFARING PEOPLE OF THE WORLD.
Official Paper of the International Seamen's Union of America.

A Journal of Seamen, by Seamen, for Seamen. Our Aim: The Brotherhood of the Sea. Our Motto: Justice by Organization.

VOL. XXXII, No. 36. SAN FRANCISCO, WEDNESDAY, MAY 14, 1919. Whole No. 2538.

THE SEAFARERS' CONFERENCE

Second Instalment of Official Reports Submitted by American Delegates

In this issue the Journal submits the second instalment of a series of reports, etc., on the recent International Seafarers' Conference held at London and Paris during February and March.

This was the first international conference at which none but organized seafarers were eligible for representation.

It was a gathering of an unusual character, considering the services rendered by the merchant seamen during the world struggle to crush the autocrats of Central Europe.

Readers of the Journal are again urged to peruse these reports with care, for in the very nature of their calling the seamen of the world must necessarily remain in the vanguard of International Unionism.

(Continued from last week.)

The Seamen's Conference began at ten o'clock on March 11 and continued with intermittent adjournments until the evening of March 14. The verbatim report was taken down in French, it will be translated into English, and sent out along with the other verbatim report. Upon its arrival it might with advantage be given the same treatment as we recommended for the verbatim report of the London Conference. We shall therefore at this time simply indicate the actions taken at Paris.

First: In seeking to make arrangements to execute the resolution dealing with a standard wage, it was decided that the wages of the sailors and firemen (deck and engineers' department) had been settled and would stand.

Second: That the wages in the stewards' department had not been sufficiently determined and that therefore all information about the wages of the different countries must be sent to the Secretariat within six weeks, and then to be finally acted upon.

Third: Officers' wages were to be left to a committee to be selected by the officers themselves, to gather information and to report to the Secretariat at the earliest opportunity.

A resolution instructing the Secretariat to endeavor to bring about an international conference of shipowners was proposed and adopted, we opposing the resolution and voting "No."

A resolution giving the Secretariat the power to carry out resolutions adopted in London and Paris was proposed and adopted; under the impression that it would include the resolution to submit everything to the Peace Conference, we opposed the resolution and voted "No."

A resolution requesting the Allied Powers to insist upon compensation from the Central Powers for all murdered or injured seamen amounting to at least one thousand pounds each, was proposed by the French delegation. A substitute was offered by the representative of the English masters and officers, and this substitute was adopted; we opposed this resolution as it was written by the French and the English, and voted "No," our position being that all seamen being on board of armed vessels were on war vessels, and as such were men-of-war men.

A resolution was proposed to endorse the claimed promise by England and the United States to assist France in restoring French tonnage, and was unanimously adopted.

A resolution to give all possible assistance to master, officers, engineer-officers and pilots in obtaining conditions, wages and legislation, was unanimously adopted.

The resolution adopted in London that all resolutions adopted by the Conference be laid before the Peace Conference, was introduced. We opposed it upon the grounds that it would submit the seamen's future to the International Conference on International Labor Legislation, the constitution of which was not yet agreed upon, and which promised to be of such nature as to give the seamen no hope and to the American seamen no safety. We moved as an amendment that it be laid over at least until the composition and power of such body shall be decided. In this we obtained the active support of the French and Swedish delegations; whereupon, the resolution was unanimously laid over, and was not further considered by the Conference. There is therefore no power to submit anything done to the Peace Conference.

A resolution was proposed to amend the laws relating to wireless telegraphy and dealing with wireless operators, amongst which was a request to the different nations to make the operators officers on board of ships. This resolution was opposed by us and the British, because it was a new matter with which we were not prepared to deal, owing to lack of information. The resolution was withdrawn and the wireless telegraphers were invited to furnish to the Secretariat full information, so that it might be taken up and dealt with in the next conference of the International Seafarers' Federation; whereupon the Conference adjourned to meet at the regular time at a place to be later determined by the Secretariat.

Respectfully,
(Signed) ANDREW FURUSETH.
EDWARD P. FLYNN.

Paris, March 16th, 1919.

We three American delegates, after considering the situation, here and in Scandinavia, have agreed that Furuseth may have to remain here some time after we leave, and that it appears in the best interests of American seamen especially, and seamen generally, that Furuseth should again go to Scandinavia.

(Signed) WILLIAM L. CARTLEDGE.
PATRICK FLYNN.
ANDREW FURUSETH.

ADDITIONAL REPORT.

March 24th, 1919.

Comrade Flynn left Paris on the 18th instant, when we thought everything about set. I went with him to the station and then came back to see Mr. Robinson, who told me that everything had been upset and that it had been agreed by a sub-committee that Sections 19 and 20 were to read as follows:

New Article XIX.

"When the Conference has decided on the adoption of proposals with regard to an item in the Agenda, it will rest with the Conference to determine whether these proposals should take the form (a) of a recommendation to be submitted to the high contracting parties for consideration with a view to its being effected by national legislation or otherwise, or (b) of a draft international convention for ratification by the high contracting parties.

"In either case a majority of two-thirds of the votes cast by the delegates present shall be necessary on the final vote for the adoption of the recommendation or draft convention, as the case may be, by the Conference.

"A copy of the recommendation or draft convention shall be authenticated by the signature of the President of the Conference and of the Director and shall be deposited with the Secretary-General of the League of Nations. The Secretary-General will communicate certified copies of the recommendation or draft convention to all the high contracting parties.

"Each of the high contracting parties undertakes that it will, within the period of one year at most from the end of the meeting of the Conference, bring the recommendation or draft convention before the authority or authorities within whose competence the matter lies for the enactment of legislation or other action.

In the case of a recommendation, the high contracting parties will inform the Secretary-General of the action taken.

In the case of a draft convention, the high contracting party will, if it obtains the consent of the competent authority or authorities, communicate the formal ratification of the convention to the Secretary-General and will take such action as may be necessary to make effective the provisions of such Convention.

"If on a recommendation no legislative or other action to make such recommendation effective is taken, or if the draft convention fails to obtain the consent of the authority or authorities within whose competence the matter lies, no further obligation shall rest upon the high contracting parties.

"In the case of a federal state, the power of which to enter into Conventions on labor matters is subject to limitations, it shall be in the discretion of the Government of such state to treat a draft convention to which such limitations apply as a recommendation only, and the provisions of this article with respect to recommendations shall apply in such case.

New Article XX:

"Any Convention so ratified shall be registered by the Secretary-General of the League

of Nations but shall only be binding upon the states which ratify it subject to any conditions which may be contained in the Convention itself."

This of course left the seamen entirely at the mercy of our British friends.

On the 19th of March the above Sections, 19 and 20, were adopted along with the rest of the constitution. It was assumed by the American delegates that this Labor Charter would contain a definite statement saving the Seamen's Act and also extending its principles. I did not feel that way and therefore promptly submitted to Mr. Robinson, to Mr. Barry, to Mr. Gompers and through them to Colonel House, the following memorandum:—

Paris, March 20, 1919.

MEMORANDUM:

On the Constitution of the Conference on Labor Legislation in Relation to the Seamen's Act of America.

"On behalf of the seamen we respectfully protest against the whole constitution—the representation and the powers granted—but more especially against Article XIX.

"There may be some question, about the extent to which the powers granted may go. It is, we think, possible to take the view that Conventions prepared and adopted by the Conference and obtaining the endorsement of the governing body must be ratified to preserve good faith and escape the punitive clauses in so far as the Nation has the power under its own Constitution to deal with the question by way of Convention or Treaty. But even if this be not the case there is certainly a moral obligation to ratify such Conventions."

The Consequence:

"The Seamen's Act was subject to strong opposition before it was enacted. The protests against it by other nations have continued. It compels equalization of wage-cost in operating merchant vessels and therefore gives to America—the high-wage Nation—an equal opportunity on the ocean in international commerce. This according to European and especially British opinion is contrary to the interests of Great Britain.

"The Conference on Labor Legislation meets and dominated by Great Britain and her self-governing colonies and dependencies uses the machinery provided to adopt a Convention, which in some form establishes an international law, when ratified, a principle to the effect, "that Seamen for the purposes of protection and discipline shall be subject at all times and places to the law of the flag under which he serves," and the Seamen's Act with its freedom for the seamen and its opportunity for America passes away if such Convention is ratified by the U. S. Senate.

"The seamen lose such protection as comes from the popular branch of our Congress and the fact that ordinary legislation must be enacted in the open under the searchlight of publicity.

"If it be contended that this is the situation now, our answer is, that an ordinary treaty with one nation has not the prestige that will be carried by a general treaty coming with the recommendations of the Conference on Labor Legislation and backed by the League of Nations.

"We feel that this machinery is especially arranged to cover this question and possibly the question of immigration. We cannot subscribe to any suggestion that this is not in the minds of the European delegates who insist upon the convention idea in place of the principle of recommendation.

"We cannot believe that the delegates from Great Britain and other nations are not acquainted with our constitutional limitations. We believe that they know and that they are either trying to over-reach the United States or to deceive their own people.

"If it be purely a question of the United States being part of a scheme to enforce something on other nations under the idea that it will, when dealing with working people other than those employed in interstate and foreign commerce, apply to the working people of the United States, then of course it is a deception of their own people.

"This constitution with its practically unlimited power granted resembles somewhat the first draft of the Constitution of the United States before the limiting amendments were adopted.

"There are limiting amendments—the Labor Charter—proposed here. They may or may not be adopted. If it should be adopted that: "A seaman shall not be punished by imprisonment for leaving his vessel in a safe harbor, nor shall he be arrested, detained and surrendered to his vessel," then we seamen might feel safe under this constitution, otherwise not.

"Respectfully submitted on behalf of the Seamen by

"ANDREW FURUSETH.
"EDWARD PATRICK FLYNN."

On the 21st of March the so-called Labor Charter came up, and it became promptly evident that there was no disposition to put into that charter any definite statements that would save either the working men generally, or the seamen especially. Mr. Gompers made all the fight that he possibly could, but failed to get either the Thirteenth Amendment or the Seamen's Freedom adopted and nailed down. It was, however, finally adopted that: "In no case shall any of the high contracting powers be asked or required, as a result of the adoption by the Conference of any recommendation or draft convention, to diminish the protection afforded by its existing legislation to the workers concerned."

The following is a definite Report upon this matter submitted to Mr. Robinson, to be submitted to the American Peace Delegates, together with the memorandum dated March 20th:

SUPPLEMENTAL MEMORANDUM:

March 22, 1919.

"The Convention on Labor Legislation met on Friday, March 21, and in considering the Labor Charter or limiting amendments to its constitution reached the American proposal On the question of insisting that 'the labor power of a human being is not a commodity or article of commerce' the Convention voted 'Aye.'

"On the question of adopting as part of the 'Labor Charter' the Thirteenth Amendment to the Constitution of the United States—prohibiting slavery or involuntary servitude—the Convention—claiming that there is no such thing in Europe—voted 'No.'

"On the question 'that a seaman shall not be punished by imprisonment for leaving his vessel in a safe harbor nor shall he be arrested, detained and surrendered to his vessel' the opposition as was to be expected was led by Great Britain. Mr Barnes, pleading for the seamen, opposed this declaration He was followed by Mr. Fontaine, for France expressing great sympathy with the seamen but feeling that this proposition must be laid over for some body of technical experts. He was followed by Italy whose representatives took the same position.

"Upon the request of Mr. Gompers an adjournment was taken in order that he might keep an engagement with the President of the United States.

"On reconvening this day Mr. Gompers made an earnest appeal for some guarantee that the working people who have reached a higher standard than the average which some future conference might be willing to adopt and requested that the question before the House be temporarily laid aside to consider such guarantee. This was agreed to and the following was adopted as a protocol to be read in connection with Article 19 of the constitution:

> "'In no case shall any of the high contracting powers be asked or required, as a result of the adoption by the Conference of any recommendation or draft convention, to diminish the protection afforded by its existing legislation to the workers concerned.'

"The French suggested that there ought to be either special organization or special meeting to deal with seamen's legislation. After some discussion and with the understanding that it meant 'eventually' this was adopted, the representatives from the United States voting 'No'.

"The question then recurred on the freedom of seamen. A vote was taken, American representatives and the representatives from Cuba voting 'Aye,' the representatives from England, France, Italy, Belgium, etc., voted 'No'.

"Most respectfully submitted.
(Signed) ANDREW FURUSETH."

It seems that the Seamen's Act is safe, together with such higher standards for other work people as have been attained in the several other countries but it should not be forgotten that there is nothing definite here. The Conference and the nations to which its draft convention are submitted will of course be the parties to determine what is to be considered as diminishing the protection afforded by existing standards to the workers concerned.

Respectfully submitted,
(Signed) ANDREW FURUSETH.

Since my arrival in London I have written the following letter to the President:—

"London, March 26, 1919.

"Honorable Woodrow Wilson,
President of the United States,
Paris, France.

My dear Mr. President.

Busy and over-burdened as you must necessarily be, I feel that I would not be doing my duty to you if I failed to send you this letter.

The representatives from the United States to the Convention on International Labor Legislation submitted two clauses for the proposed Labor Charter dealing with human freedom.

> 1. Neither slavery nor involuntary servitude except as a penalty for crime for which a person shall have been duly convicted shall exist.

This was voted down. The representatives from Great Britain leading the opposition.

> 2 A seaman shall not be punished by imprisonment for leaving his vessel in a safe harbor nor shall he be arrested, detained and surrendered to his vessel.

This was also voted down, America and Cuba voted 'Aye', all the others voted 'No' under the leadership of Great Britain. If this had been adopted the several powers would have been debarred from imprisoning any seaman who might return to his own country after having deserted his vessel in some other country.

After a tremendous struggle the following was adopted as a protocol to be read in connection with Article 19 of the Constitution of the Conference on International Labor Legislation:

> "In no case shall any of the high contracting Powers be asked or required, as a result of the adoption by the Conference of any recommendation or draft convention, to diminish the protection afforded by its existing legislation to the workers concerned."

Since my arrival here I have submitted these matters to some English labor leaders. They were astounded and shocked.

It is my deliberate judgment that failure to write these two propositions into the Labor Charter will rouse, not only the working peo of America, but the working people of the world against this constitution and against the League of Nations. I do not charge that this was the intention, but considering the expressions from labor leaders here, it would look somewhat like that. With reference to the proviso or protocol, the men with whom I have spoken promptly caught the word "existing" and then said "This is crystallization."

I do not know if it be possible for you to write these two defeated clauses into the Labor Charter. I feel that you would desire to. I feel that I would be lacking in my duty if I did not furnish you with this information. I shall expect no answer.

Most respectfully and faithfully yours,
(Signed) ANDREW FURUSETH,

ADDITIONAL REPORT.

London, March 29, 1919.

Yesterday I learned that the Executive Council of the British Seamen's Union were to meet yesterday and to-day at Anderton's Hotel, in Fleet Street, and as a result I went to their meeting yesterday afternoon; at that time I spoke to several of them, stating that I had a truthful report to make to the seamen of Scandinavia as well as the seamen of America, and I did not want in any way to misrepresent either the statement or the position which the leaders of the British seamen are occupying, and for that reason I had two definite questions to put to them in their executive meeting.

At their convening to-day, Mr. J. Havelock Wilson called to their attention that I was present and that I wanted to put some questions, and he thought it might be better to do that at once. On a motion temporarily to lay aside the Agenda to hear me, it was adopted, and I proceeded to state that the American delegation to the convention for the making of a constitution for a Conference on International Labor Legislation, had submitted for the purposes of an International Labor Charter: First: The adoption and insertion of the Thirteenth Amendment to the Constitution of the United States. Second: A provision that a seaman shall not be punished by imprisonment for leaving his vessel in a safe harbor.

I thereupon read the following letter which I had sent to the President of the United States:

"London, March 26, 1919.

"Hon. Woodrow Wilson,
President of the United States,
Paris, France.

"My dear Mr. President:

"Busy and over-burdened as you must necessarily be, I feel that I would not be doing my duty to you if I failed to send you this letter.

"The representatives from the United States to the Convention on International Labor Legislation submitted two clauses for the proposed Labor Charter dealing with human freedom.

> "1. Neither slavery nor involuntary servitude except as a penalty for crime for which a person shall have been duly convicted shall exist.

"This was voted down. The representative from Great Britain leading the opposition.

> "2. A seaman shall not be punished by imprisonment for leaving his vessel in a safe harbor nor shall he be arrested, detained and surrendered to his vessel.

"This was also voted down, America and Cuba voted 'Aye', all the others voted 'No' under the leadership of Great Britain. If this had been adopted the several powers would have been debarred from imprisoning any seaman who might return to his own country after having deserted his vessel in some other country.

"After a tremendous struggle the following was adopted as a protocol to be read in connection with Article 19 of the Constitution of the Conference on International Labor Legislation:

> "'In no case shall any of the high contracting Powers be asked or required, as a result of the adoption by the Conference of any recommendation or draft con-

(Continued on Page 9.)

WEEKLY NEWS LETTER

Contributed by American Federation of Labor

Burleson Cornered by Unionist.

Resenting what he terms "an indictment against the nation" by Postmaster-General Burleson, in charging that the critics of his administration are actuated by political bias or selfish motives, Secretary-Treasurer Flaherty of the National Federation of Postal Employes, has reviewed organized labor's opposition to the postal executive.

"The truth is," said the trade unionist, "that every element in the nation is now aware of the obvious unfitness of Mr. Burleson for the position he occupies, and organized labor was the first group to publicly call attention to the fact.

"Labor is fighting Mr. Burleson not because of his zone-rate law or his suspension of the pneumatic tube service or his change in the system of compensating the railroads for mail carriage, but solely because he has no conception of modern industrial or economic problems. He still holds to the archaic chattel slavery idea that labor is a commodity. He is so constituted that he cannot understand the aspirations and the ideals of the American workmen over whose welfare political mischance has placed him.

"His viewpoint on labor questions is reflected in his votes as a Congressman. He voted against the Federal compensation law, the phossy jaw legislation, and he sponsored the iniquitous rider that sought to limit the tenure of civil service employes to seven years. This was a direct blow at the Federal civil service.

"For six years he has been Postmaster-General. In that time he has not made a single constructive recommendation for employes' legislation. On the contrary he sought to nullify the employes' eight-hour law and their weekly rest law; he endeavored to lower postal wage standards; he lobbied in person against the legislation giving postal employes increased compensation. In his report to the Sixty-fifth Congress he brutally referred to his employes' agitation for wage increase as a selfish attempt on the part of men already getting three times the wage of the soldiers in the trenches."

Pork Prices Risen 100 Per Cent. Since 1913.

Retail pork prices have jumped 100 per cent. since 1913, United States Labor Department figures show.

Hogs are more plentiful than ever before, according to Department of Agriculture figures, which show that in 1916 the total number on farms was about 67,000,000 head, while it now has jumped to more than 75,000,000 head.

Storage houses are jammed with pork, according to investigations made for the United States Chamber of Commerce.

Retail pork prices, then, are not responding to the normal law of supply and demand, officials say. According to this law pork prices should drop when hogs are plentiful.

But good bacon has soared 117 per cent. in prices paid at the corner grocery, nation-wide surveys of the Labor Department prove. Ham has gone up 99 per cent. and pork chops 93 per cent.

Similar boosts have not overtaken retail prices of other meats. Sirloin steak has jumped only 62 per cent. since 1913; round steak, 75 per cent., and rib roast but 65 per cent.

Hogs are now selling for more than $20 per 100 pounds wholesale at the packing cities. This represents an increase of nearly $5 per 100 pounds since March 1.

Farmers now are getting more for their hogs. But the increase in prices paid them is far below the increase in retail prices of pork cuts paid by the consumer, say officials.

Reason (?) for Child Labor.

Children must remain in industry that they may contribute to the family income, says the Washington Post, in discussing the new law which levies a 10 per cent. tax on the profits of a concern that employs children under 14 years of age.

The Post is not in sympathy with the theory that the coming generation must not be stunted in mill, mine and factory, and that the father should be assured a living wage. This is the way the Post would solve the child labor evil:

"In framing a child labor law the utmost care must be exercised to accomplish the desired result without inflicting hardship upon any one. It must be remembered that all children do not aspire to higher education or professional careers. There are those whom circumstances compel to begin wage earning at an early age in order that they may contribute to the family income. Their opportunities must not be infringed or their prospects curtailed. The new Federal law does not aim to prevent the employment of children in industrial establishments. Its purpose is to regulate that employment so that they will have the protection of law which will guarantee them reasonable hours and proper working conditions."

Poison Traced to Lead.

In a pamphlet on "Women in the Lead Industries," written by Alice Hamilton, M. D., and issued by the United States Bureau of Labor Statistics, it is stated that lead is by far the most common industrial poison, being responsible, according to Teleky, for no less than 95 per cent. of all the poisoning due to occupation.

The popular idea about lead poisoning, held especially by foremen and superintendents, says Dr. Hamilton, is that the workman poisons himself by eating his lunch without carefully washing his hands, but it is safe to say that there is abundant proof that lead dust and lead fumes, not lack of personal cleanliness, are responsible for most of the industrial lead poisoning in this country, as in all countries.

"If a man employed in lead smelting, for instance, were to get into his mouth every bit of soluble lead that is clinging to his hands at the end of a day's work he would not get as much lead as he breathes in during two hours' exposure to the dust and fumes in the air.

"It may be laid down as an absolute rule that the dustier the work the greater will be the amount of lead poisoning. In the pottery trade in the United States the writer found one case of lead poisoning for every seven women employed in lead work, while

World's Workers

The total membership of over 1200 unions in England is put at nearly 4,500,000.

One hundred and twenty labor representatives in Manila signed a pledge to refrain from calling strikes while the Philippine Independence Mission is in the United States.

According to the "Torgovo Promyshiennaya Gazeta," there were in Russia at the beginning of 1918 25.000 consumers' societies, with a membership of 9,000,000 persons, and with a yearly turnover of 500,000,000 rubles.

A co-operative weaving mill is being built in southwestern Jutland, Denmark, for the purpose of making cloth from the wool in the surrounding district, which the people themselves can send to the factory and have woven.

With English agricultural laborers hereafter the weekly hours are to be 54 in summer and 48 in winter. Those from 18 and 19 to get three shillings weekly increase; 19 to 20 four shillings; between 20 and 21 five, and 21 and over six shillings.

An eight-hour bill for all classes of Swedish labor is said to be ready to be introduced in Parliament. Special legislation will be necessary for seamen and for workers in mines. The proposals, if passed, will come in force June 1, 1920, and elapse December 31, 1923. The immediate effect of the proposed bill is an enormous fall in the price of stocks, as manufacturers assert that wages now being paid will make it impossible for Swedish factories to continue production.

According to reports from the Canadian Department of Labor, the labor situation, so far as skilled workmen are concerned, is but slightly worse than normal, and not nearly so bad as at the end of 1915. Recently 1485 labor unions, representing a membership of 178,071 skilled workers, made reports to the labor department, which showed that of this number of workers 4,930 were reported as unemployed on December 31 last, this being a percentage of 2.42, as compared with the previous year of 2.17 per cent.

The following was penned by an Australian labor editor in a pessimistic vain: "Under our present system there are 237,714 organized workers in New South Wales and there are 268,000 unorganized workers in Sydney and Newcastle alone. Note that there are more unorganized workers in Sydney and Newcastle than there are organized workers throughout the State, yet we speak about our strength and **we sing lustily 'Solidarity Forever!'** Surely it is time that we, the workers, aroused ourselves from our long sleep and understood clearly where we stand."

Nationalization of the port of Buenos Aires having proved so effective in bringing the recent strike to a close, bids fair to become a permanent feature of shipping conditions of Argentina. Government control gave confidence to the strikers that their interests would be protected, and they returned to work, relieving a congested condition on the wharves by loading and moving out the cargo steamers. The Labor Unions are submitting a bill embodying this plan of nationalization to their congress. It has a good chance of being carried. It is supported by leading statesmen as well as by labor.

Pacific Coast Marine.

The steel 7500-ton steamer "Ossining" was successfully launched at the plant of the Todd Dry Dock and Constructon Corporation, Seattle, on May 6. The vessel was sponsored by Miss Retha Hicks, daughter of Dr. Grant Hicks.

Sponsored by Miss Edith Barry, daughter of Commodore James H. Barry, naval officer of the port of San Francisco, the United States destroyer "Nicholas" was launched at the Potrero plant of the Bethlehem Shipbuilding Corporation on Thursday, May 1, at 1:30 p. m. The vessel was named in honor of Major Samuel Nicholas of the Marine Corps.

The auxiliary schooner "Marie Derhonde," after eleven months' absence, has returned from Honolulu to Grays Harbor, her home port. Her first cargo was lumber carried from Everett to the west coast, whence she returned with nitrate and later went to the Hawaiian Islands. The "Derhonde" was the last of the auxiliary schooners built at the Grays Harbor motorship yards.

The Port of Astoria Commission has sold $350,000 in port bonds at 99.12½ to Smith & Paschall and the Seattle National Bank. The money derived will be used to defray the expense of additions to the warehouse on Pier 1, the erection of a building for a flouring mill, extension of the belt line railroad and the first work on the constructon of Pier 3 at the port dock.

Announcement was made at North Bend, Oregon, that the Kruse and Banks Shipbuilding Company had a contract from a large San Francisco shipping concern for the construction of a lumber schooner, the keel of which will be laid within a few days. The vessel will be 240 feet long with 44-foot beam, 17 feet depth and a carrying capacity of 1,000,000 feet of lumber.

Construction of a new cable line across the Pacific to insure better communication between Japan and the United States was urged by speakers at a recent dinner given by the American-Japan Society of Tokio. Viscount Kaneko said that America was the father of modern Japan. He urged that there should be another Pacific cable by way of the Aleutian Islands to insure quick communication and to remove the possibility of misunderstanding.

A new Shipowners' Association of the Pacific Coast as contemplated at a conference held recently will not be organized, it was announced. Instead it is now proposed to have each group of interests organize and delegates will be elected or appointed from each group, who will meet together and form a federation. This federation will handle all of the big and broad problems, but the individual problems will be handled by each individual group without reference to the federation.

A paragraph appearing in this column, last week's issue, gave some data regarding vessels loaded at the mills of the lower Columbia River district during the month of April. One vessel, bound for the Atlantic, was alleged to have been laden with 14,423,959 feet of lumber. This, of course, was a joker slipped into type by the operator. The proofreader was asleep on the lookout, and the editor, too, is deserving of censure because he should have insisted on discharging about 13,000,000 feet from that terrific load. But, accidents do happen, and this was one of them. The vessel in question really carried only 1,423,959 feet of lumber.

When the 8800-ton steamer "City of Eureka" was launched on May 8 from the ways of the Columbia River Shipbuilding Corporation at Portland, Ore., the builders asserted that they have reduced the United States record in steel hull fabrication. The record broken was that made by the Northwest Steel Company in Portland last week when the "West Chatala" was launched 37¼ days after keel laying. The days were of sixteen working hours each. The launching of the "City of Eureka" was accomplished in twenty-seven working days of twenty-four hours each after the keel was laid, April 4. So nearly completed was this vessel that it was hoped the machinery could be installed within nine days and her trial trip be held thirty-six days after the keel laying.

Officials of the Matson Company announced that according to information received from Washington the steamers "Wilhelmina," "Maui" and "Matsonia" may be returned to the company about September 1. As the parts taken off by the Government were carefully boxed and crated before being stored away it is anticipated that it will require but a few weeks to get the ships ready to enter the old service between San Francisco and Honolulu. It will be necessary to make a complete survey, however, and determine if the firing of the big guns has caused any damage which will have to be repaired. It is reported that every time one of the big fellows went off the vessel would shake and tremble and it is possible that some of the plates may have been sprung.

Proposal to call another general strike of union longshoremen in all Pacific Coast ports from Prince Rupert, B. C., to San Diego, Cal., in sympathy with the demands of the Seattle Longshoremen's Union, will be put to a ballot of all Coast longshoremen's unions. If approved, the strike will be called immediately afterward. This was said to be the unanimous recommendation of the Pacific Coast district, International Longshoremen's Association, adopted at its annual convention in Seattle on May 8. The strike resolution followed a conference held with District Railroad Director L. C. Gilman, who was asked by union officials to discharge non-union workers at railroad terminal docks, the cause of the local controversy. The Federal representative, it was said, made only the concession that in future water front workers required would be engaged through union halls. This reply was considered unsatisfactory by the union delegates.

Appointment of Henry M. Robinson, of Pasadena, as a member of the Shipping Board, to succeed Charles R. Page, of San Francisco, who recently resigned, was announced from the White House during the week. Robinson is an attorney and financier of Pasadena and Los Angeles and a member of the Natonal Council of Defense. He had been serving as assistant to Edward N. Hurley, chairman of the United States Shipping Board, and now is in France as special commissioner of the board at the Peace Conference, where he also acts as one of two American delegates on labor, according to a statement made at his Pasadena office. Robinson, who is about 50 years old and a Republican in politics, has been closely associated with Morgan & Co., the Bankers' Trust Company, the American Telephone and Telegraph Company, the Redwood Lumber Company and various power and rubber companies.

Unless the Shipping Board takes immdeiate action to provide a fleet of vessels adapted to the needs of the Pacific Coast lumber industry, the overseas trade will be crippled and a huge financial loss will be incurred in California, Oregon and Washington, according to Pacific Coast lumbermen, who say there is a present shortage of forty-six steamships and forty sailing vessels, with a carrying capacity of 54,000,000 feet per trip. Lumber operators and shipping men wil send a delegation to Washington to demand of the Shipping Board that provision for the requirements of the industry be made. Lumbermen say there were in 1914 144 lumber-carrying steamers and ninety sailing vessels, with a carrying capacity of approximately 188,000,000 feet per trip. There are now seventy-five steamers and fifty-five sailing ships suitable for the handling of lumber. It is anticipated that when normal conditions are restored there will be a greater demand from the foreign countries than during the pre-war days, and this will mean that a greater fleet will have to be provided. It is accepted as a fact that a big fleet will be needed to carry redwood, fir and spruce railway ties to the Atlantic Coast and to Europe, and that will require another fleet of suitable ships. It is estimated that fully 80 per cent. of the railway ties on the Atlantic Coast and a larger percentage of the ties of the railways of England and Europe will have to be replaced. A number of through shipments to supply the needs of Europe are already being forwarded by steamer via the Panama Canal.

A Japanese steamship company has negotiated a contract with the Mexican Government that provides for the establishment of a transpacific and coastwise steamship line subsidized by the Carranza Government, according to advices received from Mexico City. The official announcement of the plan was published in El Universal, a daily newspaper in Mexico City. The Japanese concern is to place four steamers on the transpacific run within a period of eight months. Four vessels also will operate in the coastwise service. The steamship line will fly the Mexican flag, will enroll and train seamen and officers for a Mexican merchant marine, will carry all mails of the Mexican Government free of expense and will make a discount of 75 per cent. on passenger rates to all Mexican immigrants. The announcement said: "The Mexican Department of Communications and Public Works has approved a contract with Toshio Onodera, representative of a large Japanese navigation company, to establish a line of steamers on the Pacific Coast. The conditions agreed to in this contract are considered very advantageous to the Mexican Government. The company will carry free of charge all correspondence and certain classes of freight. In compensation the company will receive for a period of five years a subvention proportioned to the tonnage transported during that period, but its obligation to the Government shall be maintained for a period of ten years. Eight steamers, which will carry the Mexican flag, will be put into the service, four being used in through trade and four coastwise."

F. R. WALL, who was for many years an officer in the United States Navy, is now practicing marine law in San Francisco. He gives claims of all seafarers careful attention. 324 Merchants Exchange Bldg., 3rd Floor, California St., nr. Montgomery. Phone, Sutter 5807 (Adv.)

Changes in advertisements must be in by Saturday noon of each week.

To insure a prompt reply, correspondents should address all communications of a business nature to the Business Manager.

Entered at the San Francisco Postoffice as second-class matter. Acceptance for mailing at special rate of postage provided for in Section 1103, Act of October 3, 1917, authorized September 7, 1918.

NOTICE TO CORRESPONDENTS.

Communications from seafaring readers will be published in the JOURNAL, provided they are of general interest, brief, legible, written on one side only of the paper, and accompanied by the writer's name and address. The JOURNAL is not responsible for the expressions of correspondents, nor for the return of manuscript.

WEDNESDAY, MAY 14, 1919.

WHY AN "ADVISORY COUNCIL"?

The editorial on "Government Ownership" in last week's issue of the JOURNAL briefly referred to the desirability for creating a new National body, or advisory council, composed of shipowners and seamen. It was stated that the function of such a council should be to supervise the operation of merchant ships and to exercise at least advisory authority in all matters relating to the conditions of seamen while employed on ships.

The reasons which prompted the suggestion for the formation of a joint advisory council of merchant shipping are, of course, quite obvious.

By the very fact of its existence a council of this character would tend to create confidence between shipowners and seamen, and thus make possible the establishment of relations of the most intimate kind, ultimately extending as far in the direction of practical control as the parties to them may deem advisable.

The council should be composed of men elected by the existing organizations of shipowners and seamen, each having an equal voice and vote in its deliberations. It should maintain headquarters, hold general meetings, and publish its proceedings. The expense of maintenance should be borne in equal proportions by seamen and shipowners upon whatever basis may be deemed equitable.

The council should not interfere with or in any way assume to restrict the freedom of action of seamen or shipowners. Both parties should reserve all pre-existing rights of action, individual and collective. The sole obligation of membership should consist in an agreement upon each part to advise with the council in any and all matters affecting the joint interests.

The council should have no power to make or unmake law or regulations. All such power should continue to reside in the Government, and all questions of enforcing law or regulations should continue under the authority of the respective officials of the Government. As the latter, in their relations with the council, would be dealing with an essentially private body, they would be free to act without fear of violating the "comity of the various Government departments," having jurisdiction over ships and shipping.

It may be said that a body so formed would be powerless to do more than create discussion. This, however, is in reality an advantage. With free discussion there is little doubt that agreement would be reached on many matters now in dispute. The proceedings would develop a sense of mutual confidence and responsibility. Partisanship would give way to partnership, with a consequent improvement in the attitude of seamen and shipowners toward each other and a better sense of joint responsibility for the conduct of shipping affairs.

The council should be created by law. To that extent it would be a public body. In every practical sense it would be a private organization, with membership limited to the parties immediately involved in the conduct of shipping.

The JOURNAL submits the foregoing suggestions not for selfish reasons, nor in any attempt to boost the existing organizations of seamen. In the final analysis, the future of the American Merchant Marine will depend largely upon the character and dependability of the human element involved. A national maritime spirit is almost essential to the successful operation of our country's new mercantile fleet. And the basis of such a spirit is co-operation, confidence and joint-responsibility by and between the small group who direct the operation of ships and the larger body of men who are engaged in the manifold duties of sailing the ships from port to port.

INDUSTRIAL UNITY.

The following self-explanatory resolution was unanimously adopted at a recent mass meeting of fresh-water seafarers, at Buffalo, N. Y.:

Whereas, The necessity for co-operation between the organizations of Seamen, Shipowners and the Government is essential to the Nation's progress during the reconstruction period; and

Whereas, The need for developing the personnel of our Merchant Marine is a national necessity which can best be accomplished through a closer relationship between the employer, the employed, and the Government; and

Whereas, The licensed men as well as the unlicensed men comprising the crews of vessels navigating the Great Lakes, realize the value of organization and the strength of co-operation; therefore be it

Resolved, That the Masters, Mates and Pilots, members of Buffalo Harbor No. 41; the Marine Engineers, members of N. M. E. B. A., No. 1; and the Sailors, Firemen and Cooks, members of their respective organizations on the Great Lakes, in meeting assembled, endorse the formation of a maritime federation of all officers and men employed on Lake ships; further

Resolved, That we urge upon these factors to carry this proposition into effect in order that the seamen's standard of life may be improved and the strength of the nation increased to a corresponding degree.

The seamen of the Great Lakes are to be congratulated for striving toward industrial unity. On the Pacific Coast a similar movement has been inaugurated by the Sailors' Union of the Pacific. A preliminary meeting of accredited delegates from the five marine organizations has been held and the sentiments expressed were unanimous to the effect that an alliance of these important factors (i. e., the five crafts who man the ships that go to sea) has become not merely desirable but necessary.

Increased means and increased leisure are the two civilizers of men.—Disraeli.

SOUND ADVICE.

Revolutionary industrial propaganda can never be stilled by arbitrary suppression, by court decisions, by imprisonment, or by strong-arm methods. In my opinion, the use of these methods constitutes grave national danger. It will jeopardize our whole industrial organization and present system of civilized development and will destroy our present form of government. The kind of disorganizing propaganda now so far-reaching in its scope can not be forcibly suppressed. It can only be successfully combated by enlightened, sound, and universal education among those whom this propaganda is intended to reach.—Excerpt from report of Robert P. Bass, Director of the Marine and Dock Industrial Relations Division, United States Shipping Board.

Those who so strenuously advocate repression instead of enlightened reconstruction should find solid food for thought in the foregoing.

Never in all history have anti-conspiracy laws put an end to conspiracies, as long as there were reasons for conspiring.

With equal force and logic it is therefore contended that anti-syndicalism laws will never convert an I. W. W., nor will anti-red flag laws persuade a Socialist that his cause is less righteous just because such silly statutes have been enacted.

But be that as it may, it seems as if we are bound to pass through a period of arbitrary suppression. The Governor of California has approved three bills, enacted by the late Legislature, as outlined herein. And now, presumably, all those impatient souls who have been trying to change the established order of things by one "peaceful" means or another will join the Republican or Democratic party and thus endeavor to bring about reforms by genuinely "lawful" means.

Well, we shall perforce have to wait and see. It may be that human nature will change when everybody is properly muzzled. But those who are near the under currents of America's industrial life will want to be shown. They rather agree with the thoughtful comment of former Governor Bass to the effect that revolutionary industrial propaganda can only be successfully combated by enlightened, sound and universal education—and never by blundering repression or Prussian strong-arm methods.

OUR GROWING NAVY.

Judging from the shipbuilding program of his Navy Department, our Uncle Samuel is not taking much stock in all this talk about the League of Nations going to abolish war from the world.

For instance, ships of all classes now building for the Navy, plus those authorized to be built, number 438. These include 10 super-dreadnaughts, 6 battle cruisers, 10 scout cruisers, 195 destroyers, 71 submarines, 53 "Eagle" boats and 71 auxiliaries.

In the auxiliaries are listed 12 oil tankers, 3 fuel ships, 2 ammunition ships, 1 hospital ship, 19 sea-going tugs and 34 harbor tugs.

Truly an imposing armada, even in this age of naval armaments so huge that the imagination can hardly grasp their cyclopean power and vastness. And all for—what? War or scrap-heap? Well, in the well-worn but ever handy stock phrase, time will show.

Of the super-dreadnaughts referred to above, the keels of six have already been laid. One of these, the "Tennessee," building at the New York Navy Yard, was launched on April 30. Two others, the "California," under construction at the Mare Island, Cal., Navy Yard, and the "Maryland,"

building at Newport News, Va., are well advanced and probably will be launched this year. A fourth, the "Idaho," was launched in March, and is now being completed.

In that month, also, were launched 10 new destroyers, 1 submarine and five auxiliary ships. Present expectations are that 150 additional ships will be completed before the end of the year and delivered to the Government.

Vessels commissioned during March included 10 destroyers, the submarine "R-4," the mine sweeper "Seagull," and four harbor tugs.

Another interesting bit of news given out by the Navy Department is that soon there will be regular delivery by seaplane of mail for officers and men on all warships engaged at offshore target practice. In fact, a beginning was made on the 22nd of April at San Diego, Cal. The initial delivery was made by a seaplane from the air station at North Island, and consisted of several regulation size mail pouches for the cruiser "Minneapolis," then at target drill 20 miles out at sea. Since then regular daily deliveries of mail have been made to all the warships at target practice on the southern drill grounds off San Diego.

Just think what could be done with that bit of information by some budding Jules Verne! Verily, we live in an age that exemplifies, as never era in man's history did, the trite adage that truth is stranger than fiction.

"WETS" VERSUS "DRYS."

Only five members in the lower house of the late California Legislature made a perfect Labor Record. They voted "for" Labor all the time and they never dodged. Four out of these five were "wets" and only one was a Prohibitionist.

Perhaps there is no real significance in this "four to one" comparison. And maybe there is.

Just three members in the same legislative body voted against Labor all the time. They never missed a single roll call in their determination to be recorded against the wishes and desires of Labor. And, strange to relate, all three of them were Prohibitionists.

This is not an attempt to make propaganda for the "wets."

Anyone can draw his own conclusions from the records referred to.

But whatever these conclusions may be it seems reasonably safe to assert that even though the age of Prohibition appears to be right at our doors we are still a very long way from the millennium. In other words, while it may be conceded that the leaders of the Prohibition movement in America are inspired by the best of motives their fanatical zeal seems to run along a single track line. Putting it in still different language: Prohibition and Social Justice do not necessarily ride in the same band wagon!

In keeping with past performances, the Pacific District Unions of the I. S. U. of A. again subscribed liberally to the Liberty Victory Loan. The Sailors', Firemen's, and Alaska Fishermen's Unions each purchased a $10,000 bond. The Cooks added $3000 worth of bonds to their previous investments.

When the workers achieve mental freedom they will soon achieve industrial freedom.

RESULTS OF SEAMEN'S ACT.

Equalizing Process of Law Has Aided in Establishing Practically Standard Wages for Seamen of All Nations.

Our esteemed contributor, Attorney Silas B. Axtell, is an indefatigable champion of the Seamen's Act. Wherever and whenever a foe of that humanizing instrument bobs up to attack it, Mr. Axtell bludgeons him with facts and figures in its defense which put the incautious attacker hors de combat in no time at all. The following communication from him to the New York Globe is a good sample of his vigorous style of fighting where the Seamen's Act is concerned. We commend it to our readers as an ex cathedra exposition of a subject which was deemed of sufficient importance to be taken up for discussion by the Paris peace conference:

Editor Globe:—My attention has been called to Dr. Crane's article, "The Gist of the Shipping Question," in your recent issue, and I beg space for reply.

I am very glad this matter has engaged Dr. Crane's attention. What is said in his paragraph "First," with reference to remedies is true. In his paragraph "Second" he says: "We might induce all the other nations of the earth to enact laws similar to ours. This we cannot do, as we have no means of coercing them." In this respect there is a mistake, and it is this feature of the Seamen's Act that the doctor, as well as many other people, has overlooked.

The Seamen's Act, several hundred copies of which I have had printed in order to assist those who are desirous of informing the public as to the true state of facts, contains the following, Section 16 thereof:

"That in the judgment of Congress articles in treaties and conventions of the United States, in so far as they provide for the arrest and imprisonment of officers and seamen deserting or charged with desertion from merchant vessels of the United States in foreign countries, and for the arrest and imprisonment of officers and seamen deserting or charged with desertion from merchant vessels of foreign nations in the United States and the territories and possessions thereof, and for the co-operation, aid and protection of competent legal authorities in effecting such arrest or imprisonment and any other treaty provision in conflict with the provisions of this act ought to be terminated, and to this end the President be and he is hereby requested and directed within ninety days after the passage of this Act to give notice to the several governments, respectively, that so much as hereinbefore described of all such treaties and conventions between the United States and foreign governments will terminate on the expiration of such periods after notices have been given as may be required in such treaties and conventions."

The Supreme Court of the United States has held in a number of cases, and recently in one that I took before it, that the United States has the right, as a condition of entry, to impose any conditions whatsoever on foreign vessels that come into our ports. Such right to prohibit foreign vessels from entering our ports to comply with our regulations has been enforced by Congress by the Tariff Act, restrictions as to immigration, the prohibition of foreign-built vessels from competing in our coastwise trade, quarantine regulations as affecting foreign vessels, and many others.

England has for years required that foreign vessels carry a plimsoll line and has restricted carriage of deck cargoes from her ports, as well as exercised other prerogatives that we as a nation have exercised, as above indicated. In other words, the general policy of nations is to enforce such local legislation as they see fit for the protection of commerce or the health of its people.

In the Seamen's Act we have given the seamen a little liberty, something they have never had under our laws or the laws of any nation before. We have given them this right, because we know that we cannot hope to build up a merchant marine of native seamen without practising that much of the democracy which we preach.

By the rest of the Seamen's Act we have done what the doctor thought we could not do and did not have a right to do. We have compelled foreign shipowners to do the same thing. In other words, our Seamen's Act provides that seamen on foreign vessels as well as on domestic vessels shall have the right to demand one-half wages they have earned, etc., and the President at the direction of Congress has abrogated all treaties which gave foreign consuls exclusive jurisdiction over matters relating to wages and the internal regime of the ship. We have applied the provisions of our law to foreign vessels which are engaged in competition with our ships. And this is not doing anything unfair to foreign shipowners, for all we say to them is: "We welcome your vessels to our ports, we welcome you as competitors in our carrying trade, but we must require you to give seamen on board your ships the right to one-half portion of the wages they have earned, and upon demand."

Of course, you know that by the laws of all nations the seamen were given no wages during the voyage, except at the option of the master. The principle of the half-wage provision,

128½ Sepulveda Bldg., Sixth St. P. O. Box 67. Tel. 137 R.

Honolulu Agency, April 28, 1919.
Shipping good.

JACK EDWARDSON, Agent.

P. O. Box 314. Tel. 2526.

The United States Shipping Board is preparing to sell the Government's big fleet of steel vessels at a flexible price that will depend on the cost of steel ship construction by private contract, according to J. S. Hines of the Pacific Marine Review, who returned to San Francisco during the week after a series of conferences with officials of the board. The purpose of the Shipping Board, according to Hines, will be to safeguard the interests of persons that purchase from the Government and at the same time to protect men that buy vessels from private contractors. "Contracts for the sale of Government ships will contain a provision for additional payment if the cost of private built vessels is greater and for a refund by the Government if private shipyards build vessels for less," Hines said. "Thus, no shipping man will have an advantage over his competitor." The Shipping Board, according to Hines, has found that it will cost $180 a ton to build vessels under a competitive plan. Edward H. Hurley, the chairman, estimated the cost at $149 a ton recently. Hines explained that a report that British yards were building steel ships at a cost of $125 a ton was not accurate. "Steel is costing the British $5 a ton more than Americans pay," he said. "The cost of labor is advancing and the men are demanding shorter hours. It is estimated that English-built ships will cost $186 a ton."

Among the progressive industries of this country is that which has to do with the canning of fish—sardines, salmon, etc. Investigation of the possibilities of the fish industry in Southern California resulted in finding that the finest sardines in the world were found in California waters. As a consequence a plant was built and placed in operation at East San Pedro, California. This new plant has a capacity of 7,000 to 8,000 cases per day, and 700 to 1,000 hands employed during the busy season. The company has its own fishing fleet of 80 boats, which operate in California waters. Some 350 men are employed on these boats. The principal business of this cannery is the canning of fancy sardines in imported olive oil, and the canning of tuna fish. But they also have a special salt fish department, and also manufacture fish oil and fertilizer as by-products.

OUR WASHINGTON LETTER.

(By Laurence Todd.)

Ralph M. Easley, secretary of the National Civic Federation and editor of the National Civic Federation Review, has decided that the National Catholic War Council is too radical, in its reconstruction program dealing with labor issues.

He says as much, in his magazine.

Dr. John O'Grady, secretary of the Committee on Reconstruction of the War Council, which was composed of Bishops Muldoon, Schrembs, Hayes and Russell, replied to Easley in part as follows:

"We have no desire to engage in a controversy over the merits of the program. It speaks for itself and justifies itself. We want, however, to correct a few misconceptions. You say that the program 'is only the expression of opinion of the gentlemen signing the document and has no official sanction.' That is not true. The Bishops signed it, not as individuals, but as the Administrative Committee of the National Catholic War Council. As such, they are the authorized representatives of the Catholic Hierarchy. . . .

"You find fault with the program for not mentioning the reconstruction proposals of the American Federation of Labor and of the Industrial Conference Board, but neither of these had appeared when the Bishops' program was written. You intimate that the general policies of the American Federation of Labor are well known and should have been noticed. But the Bishops were not discussing the general policies of any organization. They dealt with the opinions of others only in so far as these had found expression in formal programs of reconstruction, and the only formal documents of this sort that had been issued by labor in the United States up to the time that they wrote were the declarations of the State and city federations that they cited. . . .

"The heading of your article (Radicals Mislead Churches About Labor) is not exactly complimentary to the Bishops. They have sufficient intelligence and sufficient knowledge of social thought and conditions to protect themselves against being 'misled by radicals.'

"Your statement that a certain sentence in the program 'sounds as if the committee were somewhat regretful that we were not more ready for revolutionary changes,' is an entirely gratuitous bit of interpretation.

"In your concluding paragraph you say that 'the churches are all controlled by boards of trustees, made up largely of business men.' In the Catholic church the control is in the hands of the Pope and the Bishops."

Easley is not satisfied with this rebuke, for he quotes some anonymous "certain Catholics who are regarded as being versed in Catholic procedure," in a "composite opinion," that Dr. O'Grady and the Bishops do not know what they are talking about.

After a long quotation of these nameless persons whom he regarded as better authority than the Bishops, Easley says:

"To make a positive declaration that 'the State should make comprehensive provision for insurance against illness, invalidity, unemployment and old age,' is to attempt to place the great Roman Catholic Church behind a group of socialistic ventures that neither the wage-earners nor the employers want."

Just who has authorized Ralph Easley to speak for the American labor movement is a mystery. Certainly not the conventions of the American Federation of Labor, nor its executive council, nor its officers, nor its local or State central bodies, nor the membership of any of its international unions. Perhaps his authority to speak for the Catholic church membership in America is similarly self-bestowed. Certainly his friends in Wall Street would not have wished him to display his wisdom just at this time in this way.

The fact is that the Civic Federation crowd is worried over the big strides made by the Labor Party movement in the Middle West and New England this past six months. Wherever organized labor has met in convention to establish a Labor Party it has adopted a program of economic demands, and these demands are aimed at the Wall Street control of American political affairs. Labor knows that with public ownership of the railroads, the merchant ships, the wires and a fair share of the Congress and administrative departments of the Government, it is going to undermine the cost of living. It is going to raise the standard of living for the wage-worker. It is going to restore the right of free press and free discussion of the causes of poverty, and of the need for complete labor organization in the shops and mines and everywhere else. Labor unions each have their own problems in their union meetings, but they face the same big problems when they get together in political convention. The Labor Party movement is closing up the ranks in unionism. Easley is scared.

There will be all kinds of camouflaged attacks on labor "bolshevism" from now on. The Illinois Federation of Labor and the Illinois Labor Party will be vilified, just as the farmers' Nonpartisan League in the Northwest has been vilified—because it is fundamentally hostile to the food profiteers, the fuel profiteers, the transportation profiteers, and the rent profiteers. Thus far the attacks on prominent men who have fought the battles of labor have been more or less indirect. But this week George P. West, who has with Basil Manly assisted Frank P. Walsh in the famous Industrial Relations Commission hearings, and is publishing the report and evidence from that inquiry, is denounced. Next week it may be Chairman Manly of the War Labor Board, or Frank Walsh, or President Fitzpatrick of the Chicago Federation of Labor. One thing is certain—these men will not be silenced by the Easleys, when they see fit to speak of the orderly political and industrial power that lies in the hands of the membership of the internationals in the American Federation of Labor.

One of the things which the convention of the Federation at Atlantic City next month will do by acclamation, unless all signs fail, will be the endorsement of the demand of the Filipino people for national independence. Crisante Evangelista, the labor representative elected by the trades unions in Manila as their member of the mission which is now presenting their independence argument to the American public, has had a conference with Samuel Gompers, and with Frank Morrison, and has found these officials of the Federation ready to give active aid.

"I conferred with many labor bodies in cities from San Francisco to New York," says Evangelista, "and not in a single instance did I find a labor man who was not friendly to the idea of our immediate independence. In the Philippines, 121 labor union officials have pledged themselves not to call any strike while our mission is in the United States."

The labor unions in the islands raised all the funds for Evangelista's expenses on the trip. Then the shoemakers made him a fine pair of shoes, the hat makers a hat, the tailors a suit of clothes, and the cigarmakers loaded him up with fine cigars.

One of the things upon which Evangelista will be qualified to report to the labor movement in the Philippines when he returns will be the danger to the labor movement itself which comes with letting an anti-labor politician get into a cabinet job—the danger of Burlesonism. He finds the Commercial Telegraphers and the Electrical Workers voting for a nation-wide strike, to compel recognition of their right to collective bargaining. He learns that to-day the hundreds of thousands of men and women in the wire service who have never joined a union are getting ready to walk out, at the right moment, to enforce their just demands. He learns that the Electrical Workers' organization is rapidly increasing, in the wire service, as the result of the stubborn hostility not only of Burleson but of the Western Union and Bell Telephone officials under him. And he smiles at the fact that in the Philippines the legislature has already taken over the railroads, the city government is taking over the street cars, and the government is hitting the coal and cement profiteers by opening government coal mines and cement factories under conditions satisfactory to organized labor.

While Burleson holds the stage, and while evidence that President Wilson is about to toss him overboard is piling up, the railroad question is still to be settled. Five thousand railroad shop workers at Denver, the press dispatches say, have adopted resolutions calling for a strike, if necessary, to prevent the return of the roads to private hands. The international officers of the shop crafts are still negotiating—though making progress—with the Railroad Administration adjustment board and the regional directors of the railroads, for the new uniform agreement covering wages and shop rules. When completed, this will establish union shop conditions in every railway shop in the United States. If Congress does not turn the roads back, all will go well. If Congress does turn them back, then the anti-labor element among the railroad stockholders is likely to upset the agreement in short order, and cause a strike.

Congress and the political managers are beginning to see it.

The British National Maritime Board has issued instructions regarding the payment of overtime to sea-going plumbers, electricians, boilermakers and refrigerator engineers. These artisans should be paid overtime at the rates and under the conditions laid down for engineer officers. As regards the plumbers, where a man signs on as a plumber he should rank with the ratings and receive overtime at the rates laid down for the men on the deck department. If, however, a man signs on as sanitary engineer, he should rank with the engineer officers and be paid overtime at the rate and under the same conditions as engineer officers.

Demand the union label upon all purchases!

THE SEAFARERS' CONFERENCE.

(Continued from Page 2.)

vention, to diminish the protection afforded by its existing legislation to the workers concerned.'

"Since my arrival here I have submitted these matters to some English labor leaders. They were astounded and shocked.

"It is my deliberate judgment that failure to write these two propositions into the Labor Charter will rouse, not only the working people of America, but the working people of the world against this Constitution and against the League of Nations. I do not charge that this was the intention, but considering the expressions from labor leaders here, it would look somewhat like that. With reference to the proviso or protocol, the men with whom I have spoken promptly caught the word 'existing' and then said: 'This is crystallization.'

"I do not know if it be possible for you to write these two defeated clauses into the Labor Charter. I feel that you would desire to. I feel that I would be lacking in my duty if I did not furnish you with this information. I shall expect no answer.

"Most respectfully and faithfully yours,
(Signed) ANDREW FURUSETH."

I then read the following again:

"A seaman shall not be punished by imprisonment for leaving his vessel in safe harbor nor shall he be arrested, detained and surrendered to his vessel."

I then put this question: "Are you in favor of a seaman being punished by imprisonment—in addition to losing his earned wages—for leaving his vessel in safe harbor? Secondly: Are you in favor that he shall be arrested, detained and surrendered to his vessel? If you are in favor of the seaman being so treated, you will answer 'Yes' on both questions; if you are not in favor you will answer 'No', in which case you will endorse this definite statement and I hope send it to President Wilson at Paris, or to Lloyd George at Paris."

J. Havelock Wilson spoke at great length, claiming that it was for the benefit of the seaman to compel him to stay by his contract and said finally: "Of two evils I choose the lesser, and if it be necessary to arrest the seaman in order to have him fulfill his contract, I am in favor of him being arrested. I am speaking for myself only."

Considerable discussion ensued; Mr. McGhee rather insisting that imprisonment for the violation of a contract to labor when no life was being endangered from him ceasing to labor, was abhorrent to him, yet, placed in the position as they were, he was not prepared to vote in favor of the declaration quoted.

Mr. Chambers said that in principle he was agreed with the American contention, but under the circumstances he thought it would be all they could do if they would re-adopt the resolution adopted by the International Conference on the subject.

Father Hopkins took the same position. Several others took the same position, and the answer which I received to my question was the re-adoption of the following resolution:

"Unanimously adopted by the International Seamen's Conference, February 27, 1919.

"RESOLVED, That this Conference, having heard the report of the American Delegates on the American Seamen's Act, 1915, is of the opinion that the working of the Act which gives to American seaman the unconditional right to quit his vessel in any safe harbor, to demand one-half his wages and failing to receive which carries cancellation of contracts, and the abolition of all advances, has acted beneficially to the American seamen and seamen of other nations employed on vessels visiting United States ports; further

"RESOLVED, That every effort should be put forward by the Federated Seamen's Unions of the world to maintain the present Act in its entire scope in ports of the United States. They are, however, of opinion that the extension of the Act at the present time to all countries may be detrimental to the best interests of the seamen of such countries. They therefore resolve that the further extension of the principles of the American Seamen's Act should be left to the judgment and efforts of the organized seamen of each respective country, and we most earnestly protest against any treaty or other international agreement which might in any way curtail the seamen's freedom in ports of the United States, or which would prevent any individual nation from conferring freedom upon its seamen and upon other seamen coming within such nation's jurisdiction.

(Signed) J. HAVELOCK WILSON,
Presiding at the Conference."

It would have been a perfectly simple proposition to answer "Yes" or "No" Since they did not answer yes, and since they would not adopt the declaration and make it their own, there is no alternative but to say that the answer was "No." They would not adopt it and therefore they are in favor that, if it be necessary in order to hold a seaman to his contract that he should be punished by imprisonment, outside of the ports of the United States, then they favor the imprisonment.

This was the best answer I could obtain, whereupon I left, bidding them "Good-by."

I am leaving for Norway, Sweden and Denmark on April 1, and shall come back to the United States direct from Scandinavia by some steamer from there.

Respectfully submitted,
(Signed) ANDREW FURUSETH,
PATRICK FLYNN.

MANNING OF NORWEGIAN SHIPS.

A new manning law which has recently become operative in Norway provides: That ships of 25-300 gross tons propelled by machinery must have at least one navigating officer; those of 300-2000 tons two, and larger vessels three officers if they are engaged in foreign service. The ships which trade in the Pacific and Indian oceans must have three navigating officers if they are of 1500 tons deadweight or more. The same stipulations apply to sailing vessels, except that their tonnage will be taken as the net register. There must be a boatswain for every ship of more than 1500 tons propelled by machinery, and on ships with a capacity of more than 700 tons which trade regularly in the North and Baltic seas, as well as on sailing ships of more than 300 tons. There must be a carpenter for ships propelled by machinery of over 300 tons, and for sailing ships of over 300 net tons. With regard to A. B.'s and deckhands, every ship propelled by machinery, of 250-300 tons, must have two and increasing up to twelve for ships of 6000-7000 tons, and after that one more for every 1000 tons. With regard to sailing ships of 200-300 net tons there must be two A. B.'s, two deckhands and one apprentice, increasing to six A. B.'s, six deckhands and three apprentices for 1800-2000 net tons, and of over 2000 tons one man more for every 200 tons. The staff for the engine room must consist of at least two engineers, if the engine power is more than 75 h. p., and at least three if it is more than 1000 h. p. The number of firemen will be reckoned on the basis that for 3½ tons coal consumption (in the tropics 3 tons) there must be one fireman, or if more than seven furnaces there must be one fireman on each furnace for each watch. Every ship with machinery must have at least one cook for 5 to 10 men, for 10 to 15 men a cook and a steward, and for a greater number a cook, a steward and a boy.

"The American Labor Party gives resolute support to President Wilson's fourteen points and a real league of nations. The draft which the President has brought back from Europe may be the best he could wring from the diplomats, but it falls short of what labor everywhere expects. While others grasp for trade and territory and punitive indemnities, labor keeps its mind on the only object worth talking about—there must be no more war. That result can not be obtained by half-way measures. We demand honest self-determination in Ireland as well as in all disputed territories. We demand honest disarmament. We want the open-door policy everywhere, open discussion and open trade. We will not help guarantee any imperialistic peace. At the same time we shall oppose with all our might the jingoes like Senators Poindexter, Reed and Lodge, who want isolation, conscription and conquest. As between them and Wilson we are for Wilson, but we are not behind Wilson. We are a long way ahead of him."—William Kohn, chairman of American Labor Party, in New York Nation.

RESULTS OF SEAMEN'S ACT.

(Continued from Page 7.)

together with the abrogation of treaties, was to give seamen on foreign vessels the right to demand half wages, and this rule has been enforced in our ports. It goes without saying the seaman would not break his contract with a foreign ship in a port of the United States unless it was to his interest to do so. The reason for his breaking of the contract was that the wages on the foreign vessels were in ratio with the wages received by shore men where they had signed on and which were much lower than the wages prevailing in the United States on vessels where there was a like ratio with the shore wages.

The result of the Seamen's Act has been to cause foreign shipowners to pay more wages, and while it is true that before 1916, when the Act went into effect, firemen and sailors could be engaged in Rotterdam, Copenhagen, Bremen, Liverpool, and other European ports at about $20 to $25 per month, now they are paying them $75 a month, or £15, the standard American wage.

It may be necessary to have a ship subsidy to make up for some other inequalities in shipbuilding or operation, but if seamen are given freedom to choose their employers a standard wage for the entire world will necessarily follow and be adopted. The Asiatic will get as much wages as the American or the Englishman. It will then become a question of which one of these races will be preferable to the employer at the same wage. Looking at it in this light, with artificial bonds removed, with the law of economy working properly, not only among nations but among individuals, can there be any doubt that the American people will rise to the opportunity and that the American seaman will again become a known quantity on the high seas?

I trust you will take occasion to treat this matter editorially in your columns. No greater service to the people of the United States could possibly be performed by any publicist than that of telling them the real truth as to the Seamen's Act. Admiral Mahan in his "History of Sea Power" has demonstrated that the principles of the Seamen's Act are true. As a nation we must have seamen as well as ships. Unless we guarantee to the men we want to go to sea a reasonale degree of liberty, protection, and right, and along with them the right to vote, we cannot expect Americans to be taking up the sea as a calling. S. B. AXTELL.

Labor's Economic Platform

Following is the Economic Platform adopted by the American Federation of Labor:

1. The abolition of all forms of involuntary servitude, except as a punishment for crime

2. Free schools, free text books and compulsory education.

3. Unrelenting protest against the issuance and abuse of injunction process in labor disputes.

4. A work day of not more than eight hours in the twenty-four hour day.

5. A strict recognition of not over eight hours per day on all Federal, State or municipal work, and not less than the prevailing per diem wage rate of the class of employment in the vicinity where the work is performed.

6. Release from employment one day in seven.

7. The abolition of the contract system on public work.

8. The municipal ownership of public utilities.

9. The abolition of the sweat-shop system.

10. Sanitary inspection of factory, workshop, mine and home.

11. Liability of employers for injury to body or loss of life.

12. The nationalization of telegraph and telephone.

13. The passage of anti-child labor laws in States where they do not exist and rigid defense of them where they have been enacted into law.

14. Woman suffrage co-equal with man-suffrage.

15. Suitable and plentiful playgrounds for children in all cities.

16. The Initiative and Referendum and the Imperative Mandate and Right of Recall.

17. Continued agitation for the public bath system in all cities.

18. Qualification in permits to build of all cities and towns, that there shall be bathrooms and bathroom attachments in all houses or compartments used for habitation.

19. We favor a system of finance whereby money shall be issued exclusively by the Government, with such regulations and restrictions as will protect it from manipulation by the banking interests for their own private gain.

WEEKLY NEWS LETTER.

(Continued from Page 3.)

in the British potteries the proportion of cases to those employed was only 1 in 64."

Dr. Hamilton recommends a strict sanitary code for employe and work-shop. "In deciding as to the length of the workday for women lead workers," she says, "it must be remembered that the longer the hours the greater the dose of lead absorbed, and the shorter the period for elimination of the dose before the next workday. It must also be remembered that fatigue increases susceptibility to lead poisoning and so does a heated or humid atmosphere."

Mackay Attacks Awards.

In a statement on the recent telegraph rate increase of 20 per cent. by Postmaster General Burleson, President Mackay of the Postal Company says:

"The real explanation is to be found in the report of the Western Union Telegraph Company for 1918 to the Interstate Commerce Commission, which has just been filed. It appears from an analysis of that report that Mr. Burleson has paid that company as compensation for five months, August to December inclusive, more than that company earned to the extent of about $2,500,000. This means a loss of over $5,000,000 for a whole year.

"Why did he give them more than they earned? And why did he give the Postal Company less than half of what it earned? If Mr. Burleson had given both companies exactly what they earned and no more, there would have been no occasion for raising the telegraph rates 20 per cent.

"He gives the Western Union $5,000,000 more than it should get, gives the Postal $2,000,000 less than it should get and then extorts from the public $16,000,000 more than there is any occasion or excuse for extorting."

Railroad Accidents Lessen.

"Safety first" policies under direction of the Railroad Administration have resulted in the organization of safety committees of employees and officers with 20,156 members, as compared with comparatively few men serving in this manner a year ago.

The railroad administration directs attention to the reduction in accidents as the result. In January, for instance, 94 persons were killed on railroads and 363 were injured, while in January, 1918, without the safety first movement developed, 212 persons were killed and 3,118 were injured.

The safety section of the Railroad Administration plans to make May a "no accident month" in the Southwestern region.

Equipment Price Less.

The Canadian Government announces that soldiers who participate in the benefits of its land settlement provisions will have the advantage of considerable reductions in price on the purchase of agricultural implements, live stock and harness. The Government has made arrangements to this effect with private parties, and will not sanction the purchase by soldiers of implements at prices greater than those quoted through these concessions.

Twelve hundred retail lumber dealers in three prairie provinces will sell lumber at wholesale prices, plus bare cost of unloading, handling and other charges.

Under the Government's land scheme a soldier must pay 10 per cent. of the purchase price in cash, but where soldiers have had farm experience in Canada, or who are otherwise qualified or equipped for farming, and who are not able to pay the 10 per cent., this amount may be waived by the Government. The purchase price must be in twenty-five annual installments with a 5 per cent. interest charge. Care is taken that the soldier is not victimized in the sale of land and that the land scheme will not be used by exploiters.

Single Tax Idea Grows.

That opposition is growing to the practice of holding idle land for increased values is shown by this statement published in The Public, a weekly magazine in New York City:

"Rack-rented New Yorkers and Americans in general will do well to keep an eye on Canada. Ottawa has been granted power by the Ontario legislature to submit to the people an ordinance exempting improvements and personal property—excepting water rates and school taxes—from taxation. The terms of the ordinance call for an exemption of 25 per cent. the first year, 50 per cent. the second year, 75 per cent. the third year, and a total exemption the fourth year.

"Persons who are acquainted with local conditions believe the people will approve the bill. If it is approved, Ottawa will in the space of four years have removed all taxes, save school and water taxes, from the products of industry, and added a corresponding amount to the tax on land. The difference to owners of well improved property will not be material, but to the owners of vacant land or poorly improved land it will be a compelling influence toward improvement. New York tenants may well ask themselves what the effect on rents would be if New York had fewer vacant lots and more buildings."

Facts obtained by military experts show that the first long-range guns that fired upon Paris on March 23rd, 1918, numbered three. They were installed near Mont Joie, in the Forest of Saint Gobain. Two were on the same railroad spur leading out of Laon, while the third was a little farther east in the vicinity of Crepy. According to the latest information, the guns were pointed at an angle of more than 65 degrees, a charge of 300 pounds of powder propelling the projectile to a height of 100,000 feet (nearly nineteen miles) on its murderous mission to Paris. With every shot ten or twelve marine guns of sixteen or seventeen-inch calibre fired simultaneously upon targets unknown in order to conceal the location of the super cannon. The shell was of 210-millimeter caliber (about eight inches). It weighed 300 pounds, but the charge of explosive contained therein varied between thirty and forty pounds. The manufacture of the shell was an innovation of the Germans. It is said to have been made of special steel treated with tungsten so as to offer the maximum of resistance for a minimum of weight.

DILLON VS. "STRATHEARN" CASE.

EDITOR, SEAMEN'S JOURNAL:

I have just received word from the attorneys for the steamer "Strathearn" that they are going to the Supreme Court of the United States on the questions of the constitutionality and application of Section 4530 half wage clause of the Seamen's Act to this British ship.

A few days ago I received a letter from John Dillon, libelant in whose name this action was commenced. Later he called upon me. Dillon is a tall, good-looking Irishman about forty years of age. He was a carpenter on the "Strathearn." He seems to understand the Seamen's Act pretty well, in fact better than some judges. He expressed the opinion that Judge Shepard was wrong when he held the five day clause, referred to the day of the arrival of the ship in port. He pointed out right away and said, "Why, the Act would not do any good at all if that was so, because only the big ships stay as long as five days in port."

That was the point on which the appeal from the decision of the District Court was originally taken by me. Then the case was taken to the Supreme Court of the United States on two certified questions. The Suneys for the steamer "Strathearn" that they Court of Appeals on the grounds that the record had not been properly certified and about three weeks ago the Circuit Court of Appeals again took the matter under advisement and on the briefs submitted by W. J. Waguespack and myself, decided that the Act was constitutional and applicable to foreign vessels.

It is interesting to know that the Circuit Court of Appeals in the Second Circuit, a preme Court returned it to the Circuit few days later handed down a decision in the case of Janssons vs. the "Italier," in which it expressed an opinion similar to that of Judge Shepard on the five day clause. This opinion, however, was gratuitous, in other words dicta. The question was not brought before the court for consideration but as stated by the court was set for future guidance of counsel and the courts. As the point was not proven at all and the question was not even discussed upon the argument of the case, it is not probable that the Supreme Court of the United States will give much weight to the opinion.

When Dillon called he also handed me a stipulation evidently prepared in the office for counsel for the ship "Strathearn" at New Orleans. The master tried to get Dillon to sign this, which would have dismissed his cause of action and settled his case forever, but Dillon would not sign and the case went on.

Dillon was very much surprised to learn that the International Seamen's Union had spent about $5,000 in an effort to collect his three months' wages and that the British Government had spent probably much more in an effort to prevent his collecting them.

He had in his hand a copy of the SEAMEN'S JOURNAL containing the recent decision of the Circuit Court of Appeals in his case. He will wait for the final outcome and I think can be depended upon to be on hand to receive the money due him.

Yours very truly,

SILAS B. AXTELL.

New York, May 7, 1919.

IN THE HEART OF A FOOL.

Never in the history of the art of writing has there been such an outpouring of literature on social science questions and kindred topics as to-day. Every known argument and appeal on the subject is artfully thrown in the path of the wayfarer that he who runs may buy. In volume they range from the diminutive brochure to the bulky, pretentious quarto. In mode of expression they run the whole gamut of the printed word, from the purely academic treatise to the more or less soul-stirring problem novel; from the abstruse to the self-evident, the subtle to the commonplace, the vague to the absolute. No possible avenue or vehicle for conveying the desired information has been neglected, so that a veritable embarrassment of riches has been created in a field where once only the select few might browse. About all that is left to the reading public is the matter of selection. And as to that, as Sam Weller said, "You pays your money an' takes your choice."

It goes without saying that where the harvest is so abundant there is bound to be a lot of chaff. In fact, the number of really worth-while books of the kind indicated is distinctly limited. Among the very best of recent vintage we unhesitatingly place "In the Heart of a Fool," a novel by William Allen White.

Were we addressing those only who have read Mr. White's previous stories we might, with profit to all concerned, stop right here. To them—his disciples they may truly be called—a book needs no other introduction or recommendation than the statement that it was written by him. But this, the latest of Mr. White's stories, deserves a circle of readers as wide as the bounds of civilization itself. For it lays bare to the bone the pharisaism and sham pretensions of modern capitalistic society, as manifested in its treatment of the conscientious objector to its tenets. And with the unerring instinct of the artist the author has presented his theme in a guise that cannot fail to impress even the most superficial of readers.

The general style of "In the Heart of a Fool" is lambent, yet subtly didactic. The most outstanding character in the tale is The Fool. His philosophy of life he discloses to a companion thusly:

"Henry, in this life I shall take what I find that I can get. I'm not going to be meek nor humble nor patient, nor forgiving and forbearing. . . . I want the advantage of my strength in this world, and I'm not going to go puling around, golden-ruling and bending my back to give the weak and worthless a ride. Let 'em walk. Let 'em fall. Let 'em rot for all I care. I'm not afraid of their God. There is no God. There is nature. Up to the place where man puts on trousers it's a battle of thews and teeth. And nature never intended pants to mark the line where she changes the order of things. And the servile, weakling, groveling, charitable, cowardly philosophy of Christ—it doesn't fool me, Henry. I'm a pagan and I want the advantage of all the force, all the power, that nature gave me, to live life as a dangerous, exhilarating experience. I shall live life to the full—live it hard—live it beautifully, but live it! live it! Henry, live it like a gentleman and not like an understrapper and bootlicker! I intend to command, not obey! Rule, not serve! I shall take and not give—not give save as it pleases me to have my hand licked now and then!"

Mr. White takes this avowed young hedonist and the other dramatis personae in the cast, and pilots them through a series of interesting and often exciting adventures and situations redolent of the atmosphere of small-town life in the Middle West. Where the pictures incline to somberness the gloom is invariably relieved by a deft touch of humor. As the plot thickens the reader is led by easy stages, and with consummate skill, up to the final climax, where the hero—strike-leader, idealist and apostle of the Democracy of Labor—is done to death by a "law and order" mob.

Running all through the story there is evidence a-plenty of the author's deep insight into human nature, and his sympathetic understanding of the wrongs so long and patiently suffered by the under dog in society. As an unusually lucid expounder of the eternal class struggle, with special reference to its after-the-war phases, the book should be read by every thinking man and woman in the land.

"In the Heart of a Fool" is published by the Macmillan Company, New York. Price, $1.60.

RESPECTABLE (?) SCABS.

The capitalist agitator is quite as scathing as the militant proletarian on occasions. The only thing is that the capitalist agitator generally does his work hidden from view and uses coercive methods that would not be at all "proper" if used by the workers

The chairman of the North Canterbury (N. Z.) Threshing Millowners' Association at the January meeting delivered himself of the following:

"Fifty-one members had paid into the Association, and there were about eighty owners who were not members. He regretted that these owners could not see their way to become members of the Association. It was a mean and niggardly policy on the part of these owners to profit by awards gained by the members of the Association without paying their own subscriptions."

Well, well! Now when union officials make similar remarks a great cry goes up from the capitalist press that the workers should be allowed complete freedom and should not be forced to join the unions.

Perhaps they will now deal similarly with this latest agitator.—The Queensland "Worker."

WALL ST. DEMOCRACY.

"Our laws are all too inadequate to deal with that public enemy, the labor agitator. We have a flabby public opinion which would wring its hands in anguish if we took the labor leader by the scuff of his neck, backed him up against a wall and filled him with lead. Countries which consider themselves every bit as civilized as we are do not hesitate about such matters for a moment."—Wall Street Journal.

In commenting on the foregoing the editor of the Detroit Labor News says: So far no policeman has arrested the editor of the Wall Street Journal for inciting a riot or murder; not even for disturbing the peace. Neither has Postmaster Burleson, the national thought controller, denied the Wall Street Journal the use of its second-class mailing privileges.

We also wonder whether this suggestion to shoot on sight those who do not agree with the exploiting interests, is a part of the new deal that labor is to get out of the victory of universal democracy! We will stop here—and let our readers form their own opinions and pass their own comments upon this stone-age method of adjusting differences between the workers and the exploiters.

Labor News

There are at least 150 co-operative societies in New England, within reach of Boston as a supply center.

The Hartford, Conn., local No. 15, International Brotherhood of Bookbinders, has secured a new wage scale for women members.

The International Brotherhood of Bookbinders secured 304 new members during the month ending March 10. The total membership on that date was 17,411.

The first wage conference held under the new minimum wage law for women in private employ in the District of Columbia has reported a miminum wage of $15.50 per week.

Miss Marie A. Depue, a high school teacher in Philadelphia, said: "The minimum salary of a teacher in Pennsylvania is $315 a year; 10,000 teachers in the State receive that salary. The average salary of a man is $71 a month and of a woman $51.

A special membership drive to enlist the thousands of women workers at the United States Navy Yards and Arsenals has been undertaken as a result of conferences in Washington between officers of the National Federation of Federal Employes and the presidents of local unions at several of the arsenals and navy yards.

Federal supervision of child labor, abolished when the Supreme Court last year declared unconstitutional the existing Child Labor law, was re-established on the 22d under regulations issued by the Internal Revenue Bureau puting into effect the new revenue act's tax on child labor products. The law levies a tax of 10 per cent. on net profits of any concern employing children under the specified ages.

The United States Department of Labor reports the migration of at least 200,000, and possibly 300,000, Negroes from the South to the North during wartime. Among the causes reported are dissatisfaction with conditions, the boll-weevil, floods, changes of crop system, low wages, poor housing and schools, unfairness in court proceedings, lynchings, desire to travel, and the influence of the Negro press.

The Co-operative World, a semi-monthly journal "devoted to the cause of Co-operation," has made its initial appearance as the organ of a local co-operative movement centering about Tampa, Florida. L. Fales, one of the earliest pioneers of co-operation in that secion of the country, is the editor. The organization, the Consumers' and Producers' Co-operative Association, is backed largely by organized labor, and expects to open a store within the next few weeks.

In concluding the annual meeting of the American Newspaper Publishers' Association, Secretary Lane declared, in referring to his plan for establishing soldiers on the land: "There are 250,000,000 acres of unused land in this country, and that includes large tracts in Wisconsin, Michigan, Maine, Minnesota, and the Southern coast States have 40,000,000 acres that are undeveloped, a crime against the world. Our proposition is to put the soldier out on this land, have him work his farm, build his house, pay him until he is on his feet, and then in forty years he can pay back Uncle Sam."

INFORMATION WANTED.

Frank J. Phillips, a member of the Marine Firemen's, Oilers' and Watertenders' Union of the Atlantic and Gulf, last heard of in San Francisco, Cal., April, 1916. Anyone knowing his whereabouts will please notify Mrs. Frank J. Phillips, P. O. Box 521, San Pedro, Cal. 2-19-19

Members of the crew of the SS. "Munrio" who were on board said vessel at the time she salved the SS. "Curytibia" in the month of January, 1918, and who have not yet received their full share of the salvage award, will kindly communicate with or call on Silas B. Axtell, 1 Broadway, New York City. 10-23-18

The Public
A Journal of Democracy

Poverty is A Crime!

It isn't a crime to be poor, any more than it is to be murdered. The poverty-stricken man is not a criminal. He is a victim of a crime for which others as well as himself are responsible. Henry George 33 years ago gave a lecture before the Knights of Labor the title of which was

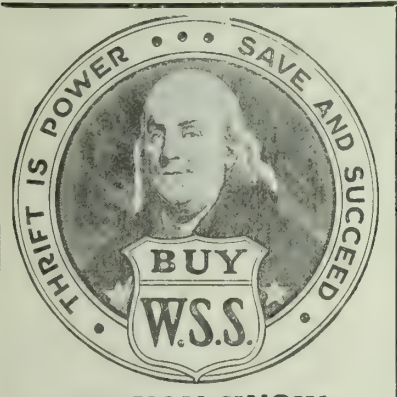
"The Crime of Poverty"

It has since become a classic and has touched the spark of ambition in the hearts of thousands of men and inspired them to better things.
You can get a copy of this gripping lecture, well printed in a neat, cloth-bound book, and THE PUBLIC, A Journal of Democracy, for 13 weeks for only 65 cents. Let THE PUBLIC be your interpreter, as it is for many of the great liberal thinkers of the day: Brand Whitlock, U. S. Minister to Belgium; Wm. C. Colver, Federal Trade Commissioner; Ray Standard Baker, and hundreds of others.

Frank P. Walsh, Joint-Chairman of the National War Labor Board says:
Every worker in America should be a subscriber to THE PUBLIC. All lovers of justice are striving toward the same end. THE PUBLIC points the way.

Write your name and address clearly on the margin, attach 65 cents, stamps or money order, and with the first number of THE PUBLIC we will send you a cloth-bound and handsomely printed copy of "The Crime of Poverty."

THE PUBLIC
122 E. 37th St., New York City



DO YOU KNOW

That War-Savings Stamps pay 4 per cent. compound interest?

That W. S. S. cost $4.12 in January and one cent more each succeeding month of the year, reaching their highest price, $4.23, in December?

That the 1919 W. S. S., known as the Franklin Issue, will be redeemed by the Government on January 1, 1924, for five dollars?

That the 1918 W. S. S. will be redeemed by the Government on January 1, 1923, for five dollars?

That W. S. S. of either issue, if necessary, may be redeemed for value to date, as indicated on the W. S. S. Certificate, at any post office upon ten days' notice?

That one thousand dollars' worth of W. S. S. is the maximum amount allowed to any one purchaser?

That Thrift Stamps cost twenty-five cents? And that sixteen Thrift Stamps are exchangeable for an interest-bearing War-Savings Stamp?

INFORMATION WANTED.

Relatives of Axel Hansen, the seaman for whose murder Capt. Pedersen, or "Hell-Fire Pedersen" of the bark "Puako," is to be tried May 15, at New York City, please communicate with the undersigned. Any seaman knowing aught of Hansen or his relatives, please write. The names and addresses of one or two witnesses who have known for some time past Capt. Pedersen's reputation, the way he is reputed to have handled his men on board ship, are also desired to communicate with the undersigned. Silas B. Axtell, 1 Broadway, New York City.

You Want the Truth

This year there will be stirring times in the Nation. Under government censorship it is increasingly difficult for the average man to get the real meaning of the social and political movements of the day.

LA FOLLETTE'S MAGAZINE

will be specially represented at Washington and will analyze and present the news from the capital truthfully and fairly. Senator La Follette is making a real fight to lift some of the tax burdens from the common people and place them where they belong — on excess profits, war profits and surplus fortunes and incomes. Because of this he is being attacked more bitterly than any other man in public life.

Send in your order today.

$1.00 Per Year—Agents Wanted

INFORMATION WANTED.

One B. Kajakcorchi, oiler, of Russian nativity and member of Seamen's Union, was injured on the steamer "Paraiso," of Swayne & Hoyt, San Francisco. The vessel was one day out of New York and on the second watch the strap on the go ahead starboard eccentric broke, with the result that Kajakcorchi had his left hand smashed all to pieces. He has been in the hospital ever since and will be disabled for many months. He has a permanent disability. Patrick Ennis and Andrew McCann, who know about the previous condition of this strap, will oblige me by communicating with me or the nearest Union delegate. This strap, we have reason to believe, was worn out and defective, as it had been heating up continuously for nearly three weeks prior to the accident. Silas B. Axtell, Esq., 1 Broadway, New York City. 8-21-18

An appeal has been taken by the owners of the Bark "Portugal" from the decision of the Federal District Court in the matter of salvage award of $30,000 recently made and referred to in these columns. The determination of this appeal may be a matter of six months. Seamen who wish to get their money as soon as possible should communicate with Silas B. Axtell, Attorney, One Broadway, New York, in order that I may send them a power of attorney form to be signed, which will be required by the court before the money can be paid out. The crew, of course, are sure to get some money and they will probably get their portion of the amount awarded by the lower court. It seems quite possible that the decision of the lower court will be affirmed.

The following men: August Rosso, oiler; Robert Anser, oiler, and V. Florio, wiper, who were employed on the S. S. "Comet," on or about November 22nd, 1917, when John Olsen was injured through the leaking of a gland which caused his hand to get tangled up in the motor, whereby he sustained severe and permanent injuries, will please communicate with me without delay. They may furnish valuable evidence to assist Olsen in his suit against the Standard Transportation Company. His injuries are very serious. S. B. Axtell, 1 Broadway, New York City.

For the benefit of the widow of John Karus, lost at sea, October 17, 1918, at 2:15 a. m., according to the report in the official log of the barkentine "Aurora," will all members of the crew of that vessel who know anything about the ship, the condition of her rigging, before and after the accident, or anything that will tend to explain his disappearance, communicate with the undersigned attorney for the widow?—Silas Blake Axtell, No. 1 Broadway, New York City. 1-1-19

Members of the crew of the SS. "Kellogg" who were on board when she picked up the SS. "Catania" can obtain money due them for salvage services by communicating with Silas B. Axtell, Attorney for Seamen's Unions, 1 Broadway, Room J, New York City. 10-16-18

The salvage case of S. S. "Princeton" which salvaged the S. S. "Ardmore," both vessels owned by Standard Oil Company of New Jersey, has been tried and resulted in an award of $7,500 to the crew. This amount has been received, and members of the crew of S. S. "Princeton" are requested to call for same at the offices of Mr. Axtell, One Broadway, New York, N. Y.

Members of the crew of the S. S. "Fred W. Whellen" who were on board November 11, 1918, when she picked up the bark "Galica" should file their claims with this office and be joined in libel which is being filed by the undersigned on behalf of the members of the crew. Silas B. Axtell, 1 Broadway, New York City. 12-25-18

Anyone knowing the whereabouts of Woodley Ransome and Charles Bland, who were members of the tug "Virginian" when she was damaged by the "Navy Tug No. 4," will kindly communicate with Arthur Jones, Agent, Marine Firemen's, Oilers' and Watertenders' Union, 513 Main St., Norfolk, Va. 11-6-18

Charles L. Carlsen, No. 1834, who disappeared from the barge "Isaac Reed" at Eureka, California, on December 31, 1918, is inquired for by his wife, Mrs. C. L. Carlsen, 107 Courtland Ave., San Francisco, Cal. 2-5-19

Members of the crew of the S. S. "Argonaut," who assisted in the salvage services to the S. S. "Jason," at the time she was in distress off the coast of Florida, on or about January 1st, 1918, will kindly call or communicate with the undersigned who is representing most of the officers and crew of the S. S. "Argonaut." Silas B. Axtell, One Broadway, New York City.

Ellis R. Nelson, last heard from at New Orleans, La., Nov., 1916, when on board U. S. C. G. S. S. "Davy," is inquired for by his mother. Anyone knowing his whereabouts will kindly communicate with R. J. Nelson, 59 Clay St., San Francisco, Cal. 11-6-18

Carl Hansen, a native of Soon. Norway, age 35, formerly a member of the Lake Seamen's Union, is inquired for by his mother, Marn Hansen, 778 Sixth Ave., Milwaukee, Wis. 8-17-18

Home News

Co-operative societies are being organized by labor men in the United States at the rate of about five a day.

The Bethlehem Steel Corporation in its annual report gives its total sales for the year ended December 31, $448,410,808, compared with $298,929,530 in 1917.

The last election in Kansas resulted in a gain of more than fifty elective offices by women, over the number elected two years ago. Women have not yet been elected as either sheriff or county attorneys, but these are the only classes of elective offices that have not been filled by women, in various counties of that State.

Two thousand men and women representing forty-six States have answered the call for a conference recently issued by the Committee of Forty-eight, with headquarters at 15 East Fortieth street, New York. The conference is called for the purpose of organizing "those who are interested in a thoroughgoing program of fundamental reconstruction," political, economic, and social.

The alienation of lands that had been set apart for the exclusive use of American Indians by the Government of the United States, into the hands of members of other races, has recently met with correction at different points on the Pacific Coast, where the United States Government has intervened and, securing a reversal of judgments of the lower courts, has restored the lands to their Indian owners.

Without a dissenting vote in either house, the Nebraska Legislature has enacted a law that will go into effect as soon as the Governor of the State signs it, which places all private, denominational and parochial schools in the State under the supervision and direction of the public school superintendents of the State, county and city, and requires them to maintain the same standard of equipment, textbooks and courses of study as the public schools.

The Bureau of the Census has made a public report of its work on divorce statistics. The figures show one divorce for every nine marriages. For 1916 the low divorce rates were in New York, North Carolina, and the District of Columbia; the high rates were in Nevada, Montana, and Oregon. Desertion was the leading cause. The marriage rate in 1916 was 1050 per 100,000, or nine times as great as the divorce rate of 112 per 100,000. The marriage rate in 1906 was 1020 per 100,000. Women obtained 68.9 per cent. of the divorces.

A supply of lumber sufficient to build 58,000 modern six-room bungalows was cut by California sawmills during 1918, according to a report just issued by the district office at San Francisco. The total actual cut reported to the Forest Service by 148 individual sawmills was 1,268,955 M. feet, a decrease of 147,881 M. feet over the cut in the State for 1917. This decrease was due very largely to unfavorable weather conditions, and to the shortage of labor incident to the war, according to the District Forester, who also makes the statement that interruptions to logging operations, due to forest fires, were for the State as a whole decidedly less frequent than for several previous years.

Domestic and Naval

The Shipping Board has ordered 100 vessels recently completed in Great Lakes yards to be re-equipped to burn oil as fuel instead of coal, which they were designed to use.

American shipyards built 2056 merchant ships, aggregating 3,225,000 gross tons, during the twelvemonth period ending March 31, 1919. This is three times greater than the production of the preceding twelvemonth period.

Substantial reductions in outward freights from the United Kingdom to Australia and New Zealand, beginning immediately government requisitions come to an end, were decided upon at a meeting of the representatives of the shipping lines concerned held in London recently.

The Bureau of Fisheries reports a series of meetings for demonstrating fish cookery, held at St. Augustine, Titusville, Miami, West Palm Beach, and Key West, Fla., under the auspices of the Home Demonstrators of the South. The housewives attending these meetings averaged from 35 to 120. At Key West sharks' meat, usually regarded as worthless, was made up into a salad, and its name concealed until every one voted it delicious.

Chairman Hurley of the Shipping Board announced that he had taken up with President Wilson the question of permitting American shipyards to build ships for foreign account so as to broaden their opportunities for obtaining business and furnish continuous employment for their labor. A number of American yards, particularly those on the Pacific Coast, have urged that the ban against accepting foreign orders be lifted so they might enter competition with foreign yards for tonnage to be built by Norway and other foreign countries.

Allan G. Ramson, of Scranton, Pa., claims he has invented a ship that is a radical departure from present lines; that is unsinkable, that is ten times as strong as the present ship idea; that can be operated at one-tenth of the cost, and that is capable of crossing the Atlantic in thirty-six hours. Mr. Ramson says the ship will surely revolutionize the shipping industry, declaring it not only utilizes the small amount of power put into its operation, but inducts power from the water and the air through which it passes. He gave a talk recently to the directors of the Board of Trade in Philadelphia, concerning his invention.

The new wrecking steamer, "Favorite," building at the yard of the Great Lakes Towing Company, Cleveland, to replace the wrecker of that name which was taken over by the Government late in 1917, is ready for business. The "Favorite," which is said to be one of the most complete salvage ships afloat, will be stationed at St. Ignace. James Callahan, who was chief engineer of the old "Favorite," will have charge of her machinery. The "Favorite" is 173 feet long, 40 feet beam and 16 feet molded depth. Her draft of water in ordinary trim is 7.5 feet forward, 12.5 feet aft, and with water ballast she can be trimmed to an even keel of 9.5 feet. She is equipped with a 35-ton crane of the locomotive type without trucks, which is located above the pilot house.

News from Abroad

Brussels dispatches state that great loss of life among the natives of the Belgian Congo, as a result of an influenza epidemic, is reported. Some estimates place the number of deaths at 500,000.

Sir Auckland Geddes has made the statement that the British Government intends by successive stages to take over all hospitals within the next forty years. St. George's, London, will be the first.

Disorders in India, particular in Lahore and the district north of Bombay, have led to the declaration of martial law in several localities. Gujerat, in the northern part of the Bombay presidency, with a population of more than 9,000,000, is the seat of widespread rebellion.

Swedish press reports received by the State Department say that at the next meeting of Scandinavian Ministers Finland and Iceland will be represented as well as Sweden, Norway and Denmark. The paper states that the invitation will be issued by the Swedish Government, as the meeting is to take place in Stockholm.

The French Chamber of Deputies has rejected two woman suffrage amendments to the electoral reform bill, one providing that members of the chamber of deputies would be elected without distinction of sex, the other for the transmission of the right to vote to the next relatives of heads of families without distinction of sex.

The news that the union of Montenegro and Serbia, two nations of the same race, speaking the same language and professing the same orthodox religion, was finally accomplished, was telegraphed by a special correspondent of the London Daily News, who was present at the last sitting of the Montenegrin Parliament.

In a recent speech in Parliament Sir Edward Carson spoke at length of "the disgraceful condition of education in Ireland." There were 15,000 to 20,000 children in Belfast alone who had no schools to go to. Such schools as there were, were insanitary. The majority of children in Belfast passed into industry at the age of 10 or 11, and nobody objected, because it created vacancies in the schools.

Japan is one of the greatest producers of menthol and peppermint, and almost controlling influences are held by that country in the markets all over the world. Before the war the export trade in these goods witnessed a steady increase. In 1912 the export of menthol crystals was 174,861 pounds, valued at $791,671, but in 1916 the total volume of shipments amounted to 511,168 pounds, with a value of $1,200,493.

Birth control is preferable to emigration when a nation becomes overcrowded, in the opinion of Dr. C. Killick Millard, Medical Officer of Health for Leicester, England. He advanced arguments for his statement at a sitting of the National Birth Rate Commission. "I decline to see that a man should be accused of failing in his duty, if he declined to have children merely for the sake of emigrating them to the Antipodes," says the doctor. Out of 80 replies to a questionnaire he had sent out to medical men, the doctor is convinced that the majority do not regard birth control as necessarily injurious.

With the Wits

"Alice seems very liberal in her views." "Yes, and very lavish of them."—Boston Transcript.

She—Am I the first girl you ever kissed? He—Gosh, no! Wasn't I in France the day the armistice was signed?—Stars and Stripes.

"I want a piece of meat without any bone, fat, or gristle." "Ye'd better buy an egg, mum."—Philadelphia Evening Bulletin.

Gibbs—I tell you, no one can fool my wife.

Dibbs—Then how did you get her? Los Angeles Times.

"Was Rome founded by Romeo?" inquired a pupil of the teacher. "No, my boy," replied the wise man; "it was Juliet who was found dead by Romeo."—London Answers.

Bacon—Are you going to Mrs. Styles' musicale?

Egbert—Why, I expected to go—

Bacon—I'm to sing, you know.

Egbert—But I've changed my mind.—Yonkers Statesman.

"I'll grant you three wishes," said the fairy. "Nothing to it," declared the woman. "Eh?" "I gotta husband who does better than that every day."—Louisville Courier-Journal.

Mrs. Henpeck—To think that I once considered you a hero! Oh, la-la-la! Mr. Henpeck—I suppose the thought struck you on the evening I performed the death-defying and foolhardy feat of proposing marriage to you.—Buffalo Express.

"What'll you have?" asked the waiter. "I'm not predicting," replied the weary citizen. "I'm going to order a cup of strong coffee with fresh cream and a steak done rare. Then I'm going to eat what you bring me and say no more."—Washington Star.

First American Soldier (to pal, writing a letter in shell-wrecked town)—Here, Jim, you aren't allowed to write your folks the name of this town that we're in. Somebody might recognize it. Second American Soldier—Aw, gwan! Even a guy that had lived here all his life wouldn't be able to recognize it now. —New York Globe.

"It is not always necessary to make a direct accusation," said the lawyer, who was asking damages because insinuations had been made against his client's good name. "You may have heard of the woman who called to the maidservant: 'Mary, Mary, come here and take the parrot downstairs—the master has dropped his collar-stud.'"—Windsor.

Taylor's Nautical Academy

Established 1888

Consular Building, Corner Washington and Battery Streets, Opposite New Custom House, San Francisco, Cal.

THIS OLD AND NOTEWORTHY SCHOOL is under the direct and personal supervision of CAPTAIN HENRY TAYLOR and equipped with all modern appliances to illustrate and teach any branch of Navigation.

The class of teachers of Navigation in the past have been those having simply a knowledge of Navigation, and Navigation only. Conditions have changed, and the American seamen demand a man as a teacher with higher attainments than one who has only the limited ability of a seaman. The Principal of this School, keeping this always in view, studied several years the Maritime Law, and is now, in addition to being a thorough teacher of Navigation and its kindred subjects, a regularly admitted Member of the Bar.

There is no standard of education required of a pupil entering the School, for no matter how ignorant the seaman may be, even in the rudiments of common education, Captain Henry Taylor will teach and raise him from the depths of ignorance to the height of the average well-informed man, and in a comparatively short interval of time.

THE SEAMEN'S JOURNAL

FOR THE SEAFARING PEOPLE OF THE WORLD.
Official Paper of the International Seamen's Union of America.

A Journal of Seamen, by Seamen, for Seamen. Our Aim: The Brotherhood of the Sea. Our Motto: Justice by Organization.

VOL. XXXII, No. 37. SAN FRANCISCO, WEDNESDAY, MAY 21, 1919. Whole No. 2539.

ALASKA FISHERMEN'S AGREEMENT

Wages and Working Conditions for the Season of 1919

Secretary I. N. Hylen, of the Alaska Fishermen's Union, has supplied the Journal with a copy of the Alaska Salmon Fishermen's Agreement covering wages, percentages and working conditions established by the Union for the Season of 1919.

All who have followed the splendid progress of the Alaska Fishermen's Union, since its birth, will find in the Agreement printed herewith still further practical and tangible evidence of the old contention that "it pays to organize"!

It should be noted that with the exception of certain special conditions and percentages under Section 5 of the General Agreement (noted as compensation) the Agreement applies to all parts of Alaska.

AGREEMENT

Seamen, Fishermen, Beachmen, Trapmen

This Agreement attached to and made a part of the shipping articles between. . . . . ., a corporation, the party of the first part, and hereinafter referred to as . . . . . ., and each of the men signing the articles as party of the second part, witnesseth:

Section 1. The parties of the second part hereby engage in the services of said....., and agree and promise for the consideration hereinafter mentioned to give their whole time and energy to the business and interests of said..... and to work day or night (Sundays and holidays not excepted), according to the lawful orders of the captain, superintendent or whoever may be in charge; that they will during the time that they shall remain in the employ of said....., work and labor in the capacity of

Seamen, Fishermen, Beachmen, Trapmen.

Also to work on boats, lighters, vessels and in canneries, salteries and/or in any other capacity, up and down, and at and about the cannery or salting station assigned to, as per specifications of this agreement, and for the compensation herein provided.

Sec. 2. (a) Before and after the fishing season the following conditions shall apply: Forty-eight (48) hours shall constitute a week's work, time figured from Monday morning six o'clock until Saturday evening six o'clock in each week, provided, however, that at no time shall any men be compelled to work more than twelve (12) hours within each twenty-four (24) hours. If less than forty-eight (48) hours have been worked by any man between Monday six a. m. and Saturday six p. m., he shall not have to make up this time. Any man working over forty-eight (48) hours during a week or over twelve (12) hours during twenty-four (24) hours shall receive extra compensation at the rate of Fifty Cents (50c) for each excess hour so worked. Before and after the fishing season any man working between the hours of six p. m. Saturday and six o'clock Monday morning shall be paid extra compensation for such work at the rate of Fifty Cents (50c) per hour.

(b) Work done on Decoration Day shall be paid for at the rate of Fifty Cents (50c) per man per hour.

(c) In Alaska the forty-eight (48) hour week's work shall not apply to men selected as ships' watchmen; these watchmen, however, shall during this time have one night off within each week unless Five Dollars ($5.00) is paid therefor.

(d) Men must have their working time entered daily in their time books.

(e) For men working ashore actual working time to be credited. For men not working ashore, time in transfer to vessel to be credited. Time returning from vessel to shore not to be credited.

(f) For refusal to work each man shall pay the .....Five Dollars ($5.00) for every day refused.

(g) The beginning and the ending of the fishing season to be determined by the superintendent.

Sec. 3. (a) No seamen, fishermen, beachmen or trapmen, shall be compelled to work as cooks or waiters (except in emergencies caused by sickness or accident), or to work in fireroom or engine room of steamers other than filling coal bunkers, or to do any painting, or to work at any other cannery than the one to which they are assigned, except as provided by section 7, or to work building new canneries, salting stations, houses, lighters, boats or permanent ways, or wharves or extensions to same, or telephone or telegraph lines, or painting, or handling lumber or other construction materials for new canneries, salting stations, houses or for shipbuilding purposes, or handling cargo or materials from or to other parties, or handling cargo, machinery or other material for a cannery or salting station not in operation, unless extra compensation is paid therefor.

(b) Before and after the fishing season men shall not be required to work as mechanics in canneries or make boxes, lacquer and label cans, unless extra compensation is paid therefor.

(c) Men put to work on telegraph or telephone lines shall be remunerated for extra wear of their oilskins and rubber boots in addition to extra compensation and all other earnings.

(d) Extra compensation shall be paid for all work above specified under this section at the rate of Fifty Cents (50c) per hour. Money so earned to be equally divided among all fishermen, beachmen and trapmen at the cannery or salting station to which men doing such work are assigned, with the exception of hours worked by these men over eight (8) hours within each twenty-four (24) hours, which extra earning shall be paid to the individual men doing such work at the rate of Seventy-five Cents (75c) per hour.

(e) In cases of emergency such as safety of ship's or company's property being in danger, such work shall be done at any and all times without extra compensation.

(f) No extra compensation shall be paid for repair work. Painting shall not be considered repair work. Coaling any of the company's steamers shall not be considered extra work and no extra compensation shall be paid therefor except as provided in section 2.

Sec. 4. (a) The time of service shall be from the date of sailing from until return to ....., all on vessels to be designated by the....., except in case of shipwreck or necessitated abandonment of the ship through stress of weather or lawful discharge, then all wages shall cease at the date of such casualty or discharge, except for such men as are paid for the run. If such disaster occurs before or after vessel has arrived at its destination in Alaska, these men shall receive the full run money.

(b) All shipwrecked men transferred to another vessel shall continue to work in accordance with these articles on any vessel to which they may be assigned.

Sec. 5. **Compensation.**

(a) **Gill Net Fishermen.** Each gill net fisherman shall receive in addition to the wages of ONE HUNDRED AND EIGHTY DOLLARS ($180.00) for the run and all other moneys earned under this agreement, TWENTY CENTS (20c) for each King Salmon, THREE AND ONE-HALF CENTS (3½c) for each Red or Coho Salmon, TWO CENTS (2c) for each Chum or Dog Salmon and ONE CENT (1c) for each Pink Salmon, caught and delivered to the.....

(b) The.....shall not be compelled to take any Dog or Pink Salmon, but if received they are to be paid for at above rates.

(c) Fishermen put to cleaning or repickling salmon after fishing season shall be paid extra compensation at the rate of FOUR DOLLARS ($4.00) per day per man. Money so earned to be divided equally among all the fishermen, beachmen and trapmen attached to the cannery.

(d) Fishing boats and crews ordered transferred to fish at another station than the one originally attached to shall be selected by lot and shall receive for loss of time in transfer credit for average catch during such transfer of boats remaining at the respective canneries. Before and after fishing season crews of these boats shall work at the cannery they were originally assigned to. No fishing to be done in Wood River or within 500 yards of its mouth or in Nushagak River.

(e) **Limit.** Limit 1,200 salmon per day.

(f) **Beachmen and Trapmen.** Beachmen and trapmen in any part of Bristol Bay shall receive in addition to the wages of ONE HUNDRED AND EIGHTY DOLLARS ($180.00) for the run and all other earnings as provided by this agreement, compensation equal to the

average amount paid for salmon to all gill net fishermen at the same station.

(g) For every line of canning machinery for tall cans operated in Bristol Bay canneries, three beachmen shall be employed exclusive of men on traps, steamers and launches. Beachmen in excess of this number may be transferred to other work.

(h) The number of filling machines to be operated at the respective stations shall be specified in this agreement.

(i) Beachmen and trapmen shall be assigned to their stations and fishermen shall be assigned to their respective canneries at the time of signing this agreement.

(j) Fishermen, beachmen and trapmen hired in Alaska shall commence work with the arrival of the first sailing vessel and cease work with the departure of the last sailing vessel of their respective stations and shall each receive in place of run money the sum of NINETY DOLLARS ($90.00), together with all other compensation as provided for fishermen, beachmen and trapmen in this agreement.

(k) Fishermen, beachmen and trapmen, other than natives, hired in Alaska and not performing such work before and after the fishing season, shall not receive said sum of NINETY DOLLARS ($90.00); credit shall be given to the fishermen, beachmen and trapmen at the respective stations for all such sums of NINETY DOLLARS ($90.00) not so paid and it shall be shared equally among them.

(l) Men remaining in Alaska to be paid after last vessel is loaded. Men on regular annual or monthly pay not to be included.

(m) Should any fishermen, beachmen or trapmen be detained at any of the Bristol Bay stations after August 31, extra compensation shall be paid them at the rate of ONE HUNDRED DOLLARS ($100.00) per month for the time of such detention, including day of sailing. During such delay after August 31 eight hours within each twenty-four hours shall constitute a week-day's work. During such delay after August 31, work done on week days over eight hours within each twenty-four hours and work done on Sundays and Labor Day shall be paid at the rate of SEVENTY-FIVE CENTS (75c) per hour to each man so working.

(n) Should any salmon be taken from traps more than twenty-four hours after the superintendent of the station has ordered the gill net fishing season ended, credit at the price under this agreement shall be given to all fishermen, beachmen and trapmen at the respective stations and be shared equally among them.

(o) For salmon transferred to Nushagak, Kvichak, Naknek, Egegak or Ugashik from other stations, all fishermen, beachmen and trapmen employed at the station where such salmon are received shall share alike in an extra compensation equal to fifty per cent. of the price paid for such transferred salmon where caught. No such extra compensation shall be paid for salmon caught by boats transferred to another station. All red salmon caught by fishermen at stations receiving such transferred fish shall be accepted in preference to salmon sent from other stations.

(p) The basis of compensation of wages if paid by the case shall be a case of salmon containing forty-eight (48) one-pound tall cans. For wage purposes, if any salmon are packed in half-pound cans three cases of forty-eight (48) half-pound cans each to be computed as two cases of forty-eight (48) one-pound tall cans, and three cases of ninety-six (96) half-pound cans each as four cases of forty-eight (48) one pound tall cans. If salmon are salted, each barrel of salmon is to be computed as four cases and each half barrel as two cases of forty-eight (48) one pound tall cans. Regular red salmon prices shall be paid for any and all other kinds of fish that may be put up for the company in cans or barrels, dried, smoked or salted.

(q) The other men shall receive the compensation set opposite their respective names on the articles.

(r) Man with family dependent upon him shall be allowed no less than FIFTY DOLLARS ($50.00) per month payable on the first of each month. Payments to commence on May 1.

(s) All moneys earned to be payable in .....after the return of the expedition, except the sum of TEN DOLLARS ($10.00) which is to be paid on the homeward voyage to each man signing this agreement.

The other men shall receive the compensation set opposite their respective names on the articles. All moneys earned to be payable in San Francisco after the return of the expedition, except the sum of Ten Dollars ($10.00) which is to be paid to each man signing this agreement on the homeward voyage.

Sec. 6. (a) Men not on monthly or season's wages shall be paid in addition to full run money and all other earnings, extra compensation at regular coasting rates and conditions if vessel they sail on from home port to Alaska calls for cargo on the up trip at any port not in Alaska, the extra time to be computed from date of departure from home port until departure from such intermediate port, both dates included.

(b) Men not on monthly or season's wages returning on vessels leaving canneries for home port via any intermediate port shall be paid in addition to full run money and other earnings, coasting rates and conditions from date of leaving canneries until date of leaving such intermediate port, both dates included.

(c) Men arriving from Alaska on..... vessels at a port of destination other than ....., shall receive at that destination in addition to their agreed pay, first class transportation to....., or the equivalent thereof in money and Two and 50/100 Dollars ($2.50) per day for maintenance while waiting for transportation.

(d) Men hired by Seattle, Astoria or Portland companies in San Francisco, or vice versa, shall receive first class transportation to port or shipping and return, and two and 50/100 Dollars ($2.50) per day maintenance for time detained at port of shipping. Such transportation shall not be required to be furnished to men who have shipped in the same United States Customs District as the port of destination.

(e) Each man signing under this agreement at home port shall receive additional compensation at the rate of Two and 50/100 Dollars ($2.50) per day for each day delayed in home port if the vessel on which he sails is delayed more than two days after the date he is ordered on board, provided that this additional compensation shall not be paid if the delay is caused by order of the Government, stress of weather or action of men signing under this agreement.

(f) Any man signing under this agreement and discharged before sailing without fault on his part justifying such discharge, and without his consent, shall receive One Hundred Dollars ($100.00) as compensation in full to be paid within forty-eight (48) hours after discharge.

Sec. 7. (a) In case of permanent stoppage of salmon canning at the cannery, by reason of inevitable accident or casualty during the fishing season, and before three quarters of the pack has been made, according to the Chinese **contract** guarantee, such men as are not transferred to another cannery shall then receive in addition to percentages earned, full run money and monthly wages then earned, One Hundred Dollars (100) per month from time of such stoppage or destruction of cannery until return to home port.

(b) If three-quarters of the pack has been made according to the Chinese contract guarantee, the men who are not transferred to another cannery shall continue to do such work in accordance with the reading of sections 2 and 3 as the superintendent may direct, for not over twenty-one (21) days from the date that cannery operations cease without extra compensation; but if retained longer than twenty-one (21) days they shall receive, in addition to percentages earned and full run money, or monthly wages then earned, wages at the rate of One Hundred Dollars ($100.00) per month from time of expiration of the twenty-one (21) days until return to home port. Eight (8) hours within each twenty-four (24) hours to constitute a day's work. Extra time worked to be paid at the rate of Seventy-five Cents (75c) per hour to each man so working.

(c) If men are transferred to fish at other canneries, men retained at the destroyed cannery shall, in this case, receive average of boat's catch by men so transferred.

(d) Men transferred to work at another cannery shall receive in addition to all moneys then earned, percentages and conditions prevailing at the cannery to which they are so transferred.

(e) Each cannery shall be supplied with material sufficient for twenty-two thousand cases of forty-eight (48) one pound cans, or the equivalent, for every line of canning machinery for tall cans operated. Except in case of loss of material, wholly or in part through shipwreck or otherwise, fishermen, beachmen and trapmen shall be paid at the regular ratio of pay prevailing at such cannery for the amount of any shortage, provided, however, that the material on hand has been used up in canning before the run of salmon ceases.

Sec. 8. (a) On sailing vessels there shall be deducted from the run money of each fisherman, beachman or trapman not able to both steer and go aloft, the sum of Twenty Dollars ($20.00) on the outward voyage to Alaska and Ten Dollars ($10.00) on the homeward voyage from Alaska. Men not able to both steer and go aloft shall not be placed on the lookout, but shall stand their respective watches and do such other work as they may be able to do in accordance with sections 9 and 10, provided that no deductions shall be made from the earnings of netmen, watchmen, lamptrimmers or water-tenders. From every twelve gill-net fishermen aboard such vessel, one man may be detailed to work on nets. On the homeward voyage netmen not able to steer or go aloft shall do such work as they may be able to do in accordance with section 10. All money deducted on a voyage of a sailing vessel shall be equally divided among the following men aboard,—the mates of the vessel (if such mates have signed as fishermen, beachmen, or trapmen in addition to other services), the netmen and all other fishermen, beachmen and trapmen able to steer and go aloft. Watchmen, lamp-trimmers and water-tenders shall not share in money so deducted.

(b) Men not steering or going aloft on outward voyage shall not steer or go aloft on return voyage.

(c) All men assigned to steamers shall each receive full run money.

(d) For the outward voyage of sailing vessels having accommodations for two watches only, the men shall be paid Twenty-five Dollars ($25.00) each in addition to all other earnings. For the homeward voyage paragraph (a) of this section shall apply.

(e) On Bristol Bay vessels there shall be selected a sufficient number of men to discharge and load the vessels, these men to do such work in any Bristol Bay port, but they shall be required to do this work on their respective vessels only in accordance with sections 2, 3 and 9, except on vessels carrying two watches only the superintendent may put additional men on such vessels while discharging and loading. On all vessels with destinations other than Bristol Bay ports all men signing under this agreement shall discharge and load cargo. In all vessels, except steamers and schooners, there shall be no less than eight men working in the hold during the actual time of discharging and loading.

Sec. 9. Men who stay on vessels while discharging and loading agree to work all cargo to or from any lighters, steamers, vessels or canneries belonging to the.....; also to moor and clean ship, bend and unbend sails and prepare hold for cargo in accordance with sections **2 and 3**, but all lightering shall be done by the crew of the cannery to which cargo is consigned.

Sec. 10. After vessels leave Alaska for .....all men shall clean ship and scrape and oil down masts and booms when ordered. Men shall not be required to clean quarters of Orientals.

Sec. 11. Each boat used for gill-netfishing shall be equipped with tent, pump, bailer, one double and three single blocks, two water breakers of not less than four gallons capacity each, and one oil pressure stove. Boat and all equipment to be returned at the end of the season to cannery in good order. Articles missing to be paid for by boat's crew, except lost by unavoidable accident.

Sec. 12. (a) At the time of signing these articles gill-net fishermen shall be given the numbers of their respective boats.

(b) All gill-nets shall be numbered and selected by lot before fishing begins.

(c) After gill-net men have selected their fishing partners, the captains shall remain in their respective boats for the season, and no changes in boat pullers can be made except by the mutual consent of the men making the changes.

(d) If any man is incapacitated for gill-net fishing on account of illness or accident, he shall, upon recovering, be given the privilege of returning to his original boat.

(e) If any gill-net fisherman loses his partner through sickness or accident, or by partner leaving the boat, and is unable to find another partner, the superintendent may select a new partner for him. If such partner be unobtainable the fisherman so left alone shall be placed to work until a fishing partner is secured. While not fishing such man shall receive credit for the average catch of boats fishing for his respective cannery or limit when boats are on the limit.

(f) A gill-net fisherman refusing to go fishing or work otherwise shall be considered as having quit the employment of the company, and shall be paid in accordance with section 18 and the company thereby released from all further obligations to him.

(g) During the fishing season all gill-net fishermen must lay out nets at least once in twenty-four (24) hours, weather permitting. Boat crews not doing so shall pay the ..... Five Dollars ($5.00) per man for every day they neglect to lay out.

(h) If any gill-net man is put at any other work than fishing during the fishing time, he shall during such time as he does other work receive the average (or the limit when boats are on the limit) of the men fishing for the cannery to which he is assigned.

(i) Gill-net fishermen working or ordered ashore shall be paid Seventy-five Cents (75c) per hour for each hour so working, provided fishing average is below Seventy-five Cents (75c) per hour.

(j) During the fishing season any gill-net fisherman working ashore shall receive extra compensation at the rate of Seventy-five Cents (75c) per hour for all hours worked in excess of twelve (12) during every twenty-four (24) hours, customary working hours to prevail. Gill-net fishermen so employed at canneries shall not be required to handle salt or salt salmon. Beachmen may be transferred to salting salmon.

Sec. 13. (a) The..... reserves the right to limit each boat to not less than twelve hundred (1200) salmon per day, such limit to commence at midnight following notification. Notification of limit to be given before six P. M. by hoisting a large red flag both at the cannery and at receiving lighters.

(b) When boats are on the limit they may make one or more deliveries between midnight and midnight, but all boats must be discharged

WEEKLY NEWS LETTER

Contributed by American Federation of Labor

Equal Pay For Women.

The National War Labor Board has recommended that the Western Chemical Company of Denver give women employees equal pay with men for equal work, and that the employees elect a committee to take up complaints with the company.

The Board ruled that there was no justification for reducing wages, since the complaint was filed against the company last November, and that the original wage should be restored with back pay from the time of the reduction. The Board recommended that employees be granted time and one-half in excess of eight hours a day and double time for Sunday and holiday work.

Child Labor Tax Law Is Declared Illegal.

Federal Judge Boyd of Greensboro, N. C., has ruled that the tax of ten per cent. on the net profits of a concern employing child labor is a violation of States' rights and is therefore unconstitutional. The same court recently ruled that the Keating Child Labor law, which denied interstate shipments to child labor commodities, was unconstitutional. This decision was upheld by the United States Supreme Court, and Congress then passed the tax law, which is now set aside by Judge Boyd, who said that this legislation tries to accomplish regulation of employment by indirection under the taxing power of Congress, as the previous law attempted to accomplish the same purpose under the interstate commerce powers. Both attempts, he holds, are in conflict with States' rights.

The case was started by a Charlotte (N. C.) employer. The manufacturers had a more than passing interest in the proceedings as is indicated by this statement from Charlotte by Secretary Adams of the American Cotton Manufacturers' Association, who fails to distinguish between employing a child and a developed man:

"The manufacturers are contesting this law as a matter of principle rather than merely the working of young people. The manufacturers claim that if this law is held constitutional the precedent is established whereby the Federal Government can make and enforce any regulation covering conditions of employment, wages, hours and other kindred matters.

"This case has been appealed and will be carried direct to the United States Supreme Court. An effort will be made to secure a hearing at this session of the court."

Labor Pact Approved.

President Wilson has cabled Secretary Tumulty that the labor program adopted as part of the treaty of peace "constitutes one of the most important achievements of the new day in which the interests of labor are to be systematically and intelligently safeguarded and promoted."

The message was made public at the White House and reads as follows:

"The labor program which the conference of peace has adopted as part of the treaty of peace constitutes one of the most important achievements of the new day in which the interests of labor are to be systematically and intelligently safeguarded and promoted. Amidst the multitude of other interests this great step forward is apt to be overlooked and yet no other single thing that has been done will help more to stabilize conditions of labor throughout the world and ultimately relieve the unhappy conditions which in too many places have prevailed. Personally I regard this as one of the most gratfying achievements of the conference."

Would Exploit Children.

Trade unionists and Mrs. Edwin Solenberger, representing the Civic Club of Philadelphia, battered to pieces the claim of child labor advocates that the present child labor law should be weakened.

The hearing was held before a legislative committee and it took Mrs. Solenberger about two minutes to put these employers "over the ropes." The cigar men argued that their business would be ruined if children were not taught the trade. The Philadelphia woman replied that the cigar men are doing 27 per cent. of the business of the country, and that if a business that controlled 27 per cent. of the trade of the nation has managed to get that far without grinding up boys and girls it may reasonably be expected to last just a little while longer, even though it is unable to get its clutches on the babies.

State Commissioner of Health Martin told the committee that tobacco is bad for growing children and that he would not send a girl of his own into a cigar factory.

Trade unionists recorded their opposition to the bill and predicted that the time is coming when children between the ages of 14 and 16 would be in school, instead of in factories.

The author of the bill acknowledged that as originally drawn it would legalize the employment of children in a number of hazardous occupations, but that it was later modified to only permit the cigar industry to exploit children.

Miners Held Liable For Over $600,000.

In upholding a judgment of $200,000 against the United Mine Workers of America, the Federal Court of Appeals in St. Paul, Minn., has ruled that a trade union is liable for the acts of individual members. The judgment, which is similar to the English Taff Vale decision, which was overthrown by the English Parliament, was rendered by the United States Court for the Western District of Arkansas

Under the Sherman Anti-Trust law the judgment is automatically trebled and the United Mine Workers of America, as an organization, is held liable for damages totaling over $600,000.

The suit is the result of an attempt by a Philadelphia high financier to operate Arkansas coal companies on a non-union basis after he had contracted to pay higher royalties for his coal lands than did his

World's Workers

On April 22 the French Senate passed the eight-hour labor bill, which now becomes a law.

Quietly but steadily the labor question is becoming one of the new factors in the politics of Japan, and the formation of a labor party is generally expected to take place soon.

The strike which had been in progress in Limerick for some time was called off on April 24, the military authorities having made slight concessions to the strikers at the request of the Mayor and the Bishop of Limerick.

The movement for the shorter working day continues in England, and numerous trade union agreements calling for forty-four and forty-eight hour weeks are reported daily. The State Department reports consular advices from Holland and Peru announcing legislation establishing the eight-hour day for public employes in those countries.

The U. S. Department of Labor is preparing two bulletins on international labor legislation. One, a historical account of the movement, is the reproduction of all treaties and an analysis of their terms; the other is a critical statement of existing labor standards, as well as international labor standards and proposals for international standards, offered for adoption as part of the constitution of the League of Nations.

The New York Times German correspondent asserts that the German government contemplates submitting a bill prohibiting any kind of a strike until all other means of settling labor disputes have been exhausted. This measure has been advised by the highest economic authorities, who have told the government that German industry, indeed, Germany's whole existence, is doomed unless the present strike epidemic ceases at once.

According to the report of the Commission on International Labor Legislation of the Peace Conference, the International Labor Office, to be established at the seat of the League of Nations, will be under the control of a governing body of twenty-four members. The function of the International Labor Office will include the collection and distribution of information on all subjects relating to the international adjustment of conditions of industrial life and labor.

In answer to the action of the International Socialist Conference recently held in Berne, Switzerland, in appointing a commission to go to Russia and investigate the political and economic accomplishments of the Socialist Soviet Republic, the Soviet government has replied to the effect that it welcomes the visit of the commission to Russia and will guarantee to give it every opportunity to obtain complete information relative to the actual condition in the former Empire of the Czars, now a people's republic. The Soviet government's reply, which was sent by radio to Paris, ends with a bit of charming irony. Here is the text: "Now that we authorize without conditions the inquiry of this commission in Russia, we would like to know if the governments whose subjects are to take part in the work of the commission will authorize a commission of the Republic of Soviets to visit their countries."

Pacific Coast Marine.

Dr. Andrew C. Smith, who has an Alaskan mail contract, has purchased the 232-ton steamer "Bergen" from the Southern Alaska Cannery Company. The vessel will leave shortly for her new run between Kodiak and Nushagak.

Word has been received from Captain Ralph Peasley that the schooner "Fred J. Wood," of which he is in command, has been ordered to proceed to Apia from Adelaide, where she has unloaded. She will take a cargo of copra to San Francisco.

The construction of three fast passenger steamers, to be placed on the American run, is said to have been decided upon by the Nippon Yusen Kaisha. The ships will have a speed of twenty knots and a gross tonnage of twenty thousand. The first of the boats will probably be built in England, the remaining two later in Japan.

Bering Sea winter ice, which has blocked the seas around Nome since last October, will clear away early this year, according to present indications. The first steamers from the outside world probably will find a clear passage when they arrive in June. Last year ice delayed practically all vessels in that vicinity.

The Pacific Steamship Company announced that the steamship "Admiral Farragut" would be withdrawn from the Alaska run and would after June 3, alternate with the steamship "Queen" on the San Diego route. This will mean a regular schedule of three ships each week between Seattle, San Francisco, Wilmington and San Diego.

Two additional wooden steamers have been assigned to the Columbia Pacific Shipping Company. They are the "Birchleaf" and the "Fort Stevens." The "Birchleaf" is loading railroad ties for the Atlantic. The "Fort Stevens" in addition to taking on ties will load 200,000 feet of lumber on deck.

It is reported that the famous Arctic ship "Roosevelt" soon will be sold for commercial purposes by the Department of Commerce. The vessel recently was sent for repairs to the Bremerton Navy Yard on Puget Sound, where it was discovered that the alternate freezing and thawing in northern latitudes had sapped the huge oak timbers of their strength and that repairs would cost more than the original price of the ship.

Sir James Ball has arrived on the coast in connection with the placing of a large number of orders in British Columbia for delivery in the United Kingdom. Ball is authority for the statement that orders for 20,000,000 feet of lumber have been placed with British Columbia mills for shipment to Great Britain by way of the Panama canal in demountable ships. According to Ball, the British government considers the demountable ship scheme feasible.

Plans to convert the wooden shipbuilding yard of the Supple-Ballin Corporation, at Portland, into a steel yard are under consideration, according to the announcement of Arthur Langguth, vice-president of the company. The yard launched the last of its wooden steamers for the Government at 2:30 o'clock on May 15, when the composite vessel "Diana," a 4500-ton craft of the Ballin type design, was put into the water.

Harvey & Roberts, who distribute water to the vessels on San Francisco bay with their "Nymph," have decided to build a concrete water barge in order to handle the increase in business. D. W. and R. Z. Dickie have designed plans for the craft, which will be sixty-five feet long, twenty-two feet in width and nine feet in depth. The capacity will be for 42,000 gallons. The designers believe that concrete will make a first-class water carrier.

The Mexican Petroleum Company is reported to be arranging the formation of a British company, jointly owned by Mexican Petroleum and big British ship owners, to handle the sale of fuel oil to British owners. This arrangement would be similar to that under which the Standard Oil Company in England operates through the Anglo-American Oil Company. The supply of oil which is under negotiation is vast, and the deliveries would extend over a long period of years.

United States Inspectors of Hulls and Boilers Dolan and Guthrie have ordered certain changes in the furnace burning equipment of the steamer "Ozette," which arrived here from Seattle with a lot of the Red Cross cargo damaged as a result of a fire which occurred after leaving the Sound port. It is explained that the system at present installed results in the heating of the upper port bulkhead. The report does not say that the fire was caused by any defect of the furnace apparatus.

The big four-dialed clock in the tower of the San Francisco Ferry Building is taking a vacation for three weeks, to enable Captain "Billy" Beeler to replace gears which have been nearly worn out by the thirteen years of service since 1906, when they were renewed the first time. Strong trade winds which blow against the eleven-foot minute hands caused a shifting of the time, and commuters have complained that the clock frequently jumped ahead two or three minutes. The mechanism is operated by electricity. The electric siren will be sounded as usual at the noon hour.

San Francisco interests have virtually closed negotiations for the purchase of the 4,000-ton motorship "Oregon," owned by the Alaska Pacific Construction Company of Seattle, by which corporation she was built. The new purchasers of the vessel plan to operate her out of San Francisco in the Mexican trade. Various parties from time to time sought the purchase of the "Oregon," and very recently French interests were negotiating with prospects of ultimately acquiring the vessel. Her sale in this instance to San Francisco is for $400,000, half cash.

More liberal terms in the sale of wooden ships have been offered by the Shipping Board as an inducement to export houses and small transportation companies to own vessels under the United States flag. Sales also will be made to foreign interests which may desire to purchase bottoms. Buyers may pay cash for ships, in which case a lower price will be allowed, or may pay 50 per cent. on delivery, the remainder in quarter annual payments over two years, or 25 per cent. on delivery and the remainder in quarter annual payments over three years.

The California Debris Commission opened bids during the week for the construction of a new river snag boat. Schultz & Schultz were the lowest bidders, the tender submitted being $125,644. This was slightly more than $10,000 less than the bid of the Main Iron Works. The bids will be sent to Washington and it will probably be a few weeks before the contract is let. At present the elimination of the river snags is being done by the ancient "Seizer" and the commission is now compelled to have better equipment in order to rid the river of the numerous snags.

A commission of Canadian Government and Canadian Pacific Railroad technical and traffic experts is in San Francisco to inspect the harbor facilities of this port preparatory to instituting $12,000,000 in improvements for the harbor at Vancouver, B. C. Vancouver has determined to extend its foreign trade on a great scale and become one of the leading Pacific coast ports. There already has been spent $5,000,000 for six additional deep water berths. The visitors are J. M. R. Fairbairn, chief engineer of the Canadian Pacific Railroad; Captain E. Beetham, marine superintendent for the Canadian Pacific Ocean Service, Limited, and Assistant General Foreign Freight Agent F. H. Glendenning.

William H. Avery, adviser to the Asana shipping interests and the Toyo Kaisen Kaisha, who arrived from the Orient during the week on the Korea Maru, denied that American and Japanese interests have formed or even contemplate a merger which would seek to control construction and operation of ships in Japan. The only merger formed is that between more than a score of Japanese shipyards, which had about 500,000 tons of new ships on hand when the armistice was signed. According to Avery, the end of the war broke the price of steel, and the builders who had speculated expecting to sell at a fancy figure discovered that the cost of construction had dropped from $200 a ton to a figure considerably lower.

A delegation of shipbuilders from the San Francisco bay district to Washington left Sunday morning prepared to battle for the local shipbuilding interests by helping the officials of the Shipping Board assemble data to be used when the problem of the merchant marine is laid before the new Congress. The delegation which will meet with Chairman Hurley May 22 and 23 comprises: George A. Armes, president of the Moore Shipbuilding Company; J. R. Christy, manager of the Alameda plant of the Bethlehem Shipbuilding Corporation, Ltd.; W. W. Johnson of the Union Construction Company; Dan Hanlon, president of the Hanlon Dry Dock and Shipbuilding Company; J. W. Mason, representing the Schaw-Batcher Company Shipworks and Southwestern Shipbuilding Company of Los Angeles; John Craig, representing the Long Beach Shipbuilding Company; J. W. Duthie and C. H. Hamilton of Seattle, and J. R. Bowles and A. F. Smith of Portland, and others not yet named from the Northwest district. Harrison S. Robinson accompanied the delegation as its legal adviser and Maurice Asher went as secretary. The fate of the shipbuilding industry of the country and especially for the Pacific Coast, is still in the balance and every effort of every Coast interest will be needed to back up a program of additional ship construction, according to Phillip Teller, chairman of the California committee on shipbuilding.

F. R. WALL, who was for many years an officer in the United States Navy, is now practicing marine law in San Francisco. He gives claims of all seafarers careful attention. 324 Merchants Exchange Bldg., 3rd Floor, California St., nr. Montgomery. Phone, Sutter 5807 (Adv.)

The Seamen's Journal

Published weekly at San Francisco
BY THE
SAILORS' UNION OF THE PACIFIC

Established in 1887

PAUL SCHARRENBERG.....Editor
S. A. SILVER.....Business Manager

TERMS IN ADVANCE.
One year, by mail - $2.00 | Six months - - - $1.00
Advertising Rates on Application.
Business and Editorial Office, Maritime Hall Building, 59 Clay Street, San Francisco. Telephone Kearny 2228.

Changes in advertisements must be in by Saturday noon of each week.

To insure a prompt reply, correspondents should address all communications of a business nature to the Business Manager.

Entered at the San Francisco Postoffice as second-class matter. Acceptance for mailing at special rate of postage provided for in Section 1103, Act of October 3, 1917, authorized September 7, 1918.

NOTICE TO CORRESPONDENTS.
Communications from seafaring readers will be published in the JOURNAL, provided they are of general interest, brief, legible, written on one side only of the paper, and accompanied by the writer's name and address. The JOURNAL is not responsible for the expressions of correspondents, nor for the return of manuscript.

WEDNESDAY, MAY 21, 1919.

CAPTAIN DOLLAR'S PLANS.

Almost immediately following the tentative declaration of the Pacific Coast Marine Unions for an Alliance, to embrace all who man the ships that go to sea, comes the news of a move for more compact organization by operators and owners of ships.

A brand new organization of steamship owners and operators of the Pacific Coast, called the Pacific-American Steamship Association was formed during the week at a meeting in the Merchants' Exchange Building, San Francisco. Shipping men of California, Oregon and Washington are said to have been represented at the gathering. Permanent officers were chosen as follows:

Captain Robert Dollar, president and director, A. F. Haines of Seattle, general manager of the Pacific Steamship Company, first vice-president and director; Daulton Mann, general manager of the Pacific Mail Steamship Company, second vice-president and director; Fred S. Samuels, manager of the Oceanic Steamship Company, director; Captain C. W. Saunders, port captain of the Matson Navigation Company, director.

The first big problem the shipowners will attack (so they told the reporters) is that of the disposition to be made by the United States Government of the immense steel fleet constructed in the war period.

Of course, nothing "unreasonable" is to be asked. They only want the ships at the world market price, on time payments, and (incidentally) they want to put an innocent little joker in the purchasing contract. This is the way they put it: Should the market price of ships decline (before the final instalment of the price agreed to is actually paid) then the selling of the ship shall be reduced to the market price then prevailing. Should, however, the price go up they (which, as everyone knows, is entirely out of question), then they will graciously pay the raise.

In brief, these far-sighted gentlemen want the Government, i. e., the American people, to carry all the risk. They, in turn, to make all the profits.

When this "first big problem" has been satisfactorily disposed of, the worthy "Captain" Dollar and his colleagues have only one more perfectly harmless request. They want to operate the great new American Merchant Marine "without Government restrictions of any kind."

To be sure, when it was announced that "Captain" Dollar had been chosen to head the new association no one was left in doubt as to its objective.

"Captain" Dollar never had a ship under the American flag unless compelled to by law or by the temporary but stern necessities of war. He never employed an American or a "white man," unless forced to do so by Government restrictions. The cheapest, available coolie labor has been his standard of manning.

Under the circumstances it is scarcely necessary to do any speculating as to what will happen to the new American Merchant Marine if the wishes and desires of Pacific-American Steamship Association are fulfilled.

The American boy who, during the war, has been coaxed to become a merchant mariner will be sent back to the woods or the plains. It will not be necessary to send him back, either, because wages and living conditions "without Government restrictions of any kind" will soon be "a la Dollar," acceptable and suited only for Chinamen.

As for those Government restrictions having to do with safety of life, at sea, well, of course, there is no need for any and won't be any if the dear old "Captain" could ever persuade the American people that he is "it."

But to be serious. The most effective way to block this little move is to meet it by counter organization. If any argument were needed for the formation of an offensive and defensive Alliance of all seafarers it has been furnished by the newspaper propaganda of the Pacific-American Steamship Association.

JUSTICE IN INDUSTRY.

The sixty-sixth, or "reconstruction" Congress, called into extraordinary session by President Wilson from Paris, convened on Monday, this week, and Republican majorities in Senate and House organized both bodies.

Representative Gillett of Massachusetts was elected Speaker of the House over Representative Champ Clark of Missouri, Democratic candidate and former Speaker, by a vote of 227 to 172. Senator Cummins of Iowa, the Republican candidate, was chosen president pro tempore of the Senate over Senator Pittman of Nevada, Democrat, 47 to 42.

The Republicans of both bodies also elected full slates of other officers, and thus, for the first time since 1911, returned to control of the American national legislature.

Just what is likely to be written on the Republican reconstruction slate no one knows. It is certain, however, that some real, sustained efforts are to be made for a greater degree of justice in industry.

Developments from day to day in the Labor and industrial fields have convinced the more influential men at Washington, interested in a real reconstruction program, that the United States Government must lose no time in taking up the problem in earnest.

The JOURNAL does not make this comment because "the wish is father to the thought" but rather in the firm belief that the "responsible" men of the nation are beginning to realize that America has done nothing comparable to what Great Britain is doing to solve the problems of industrial transition and Labor discontent.

It is therefore regarded as a certainty that as soon as President Wilson returns to the United States he will issue a call for an all-American industrial conference or congress for the purpose of devising a constructive program to meet the peace needs of American industrial life. He is also expected to reaffirm the authority of the War Labor Board as a cooperative tribunal of industrial justice during the period of transition or until such time as the industrial congress comes to its conclusions and makes its report.

The JOURNAL has first hand information to the effect that such a program has been urged upon the President in Paris and that it has the unstinted support not only of members of the Cabinet but of those officials who have had to deal with industrial relations during the period of the war and who are convinced that a policy of drift is fraught with danger to the whole economic and industrial structure of the country. Those familiar with the existing situation are merely awaiting the President's approval and the formal announcement of the plan upon his return from France. If, indeed, he does not act before that time. It is understood that the contemplated move for an industrial congress has the support of William Howard Taft and Basil Manly, joint chairmen of the War Labor Board.

The conference feature of the program contemplates an effort to readjust industrial relations to the changed needs of peace similar to that now in progress in Great Britain and initiated by the government. Recent observers of the methods adopted in Great Britain are optimistic that results of great value can be achieved through the getting together of the representatives of employers, employes and of the general public.

In Labor circles in Washington full credit is given to the British Industrial Parliament for the avoidance of the threatened general strike of miners, railway men and transport workers. It is pointed out that the mere calling of such a parliament actually renewed faith on the part of the British worker in the determination of the government to do what is just and fair and for the common welfare in the demands of Labor and thus establish an industrial bill of rights as a bulwark against extreme radicalism and upheaval.

A duplicate of such a parliament in the United States would bring together for common counsel the Nation's foremost citizens from every walk of life. The mass of disputes daily brought before the War Labor Board indicates clearly the need for the settlement of Labor disputes on a broad and more or less universal basis. Unemployment is increasing and wages are being cut down while the cost of living remains practically the same as when the war was at its height.

Important as the work of the War Labor Board was, it essentially dealt with particular grievances in particular localities. The result is that where the board made findings on hours and wages and both parties to a dispute agreed to it, these hours and wages apply only to a particular plant or a particular industry in a given locality. Nothing that the board has done, has eliminated inequalities as to hours and wages existing side by side. In other words, there was no pro-

gram adopted applicable to all the industries or to one particular industry throughout the country.

Some of the problems with which the contemplated industrial conference is expected to deal are:

1. The need for machinery of co-operation between workers and employers in the government of industry.
2. Permanent, universal application, as far as possible, of the rights conceded to groups of workers by the War Labor Board, representing both Capital and Labor during the war. This would include the minimum wage and the number of hours of labor.
3. Separation of constructive and destructive ideas of reform in industrial relations.
4. Modification and ultimate elimination of practices and customs tending to restrict production.
5. General welfare and education of workers and their families.

Summarizing these problems is not an easy task but all may well be grouped under the title "striving for justice in industry".

Without doubt, it is largely a matter of education, of learning how to deal with one another. The United States, from the very inception of the Nation, is the great experiment in how to give men as much as possible of what they earn, which, of course, should be their right in any real civilization. America started in this direction because our forefathers insisted on certain political rights. Now we are finding that political rights must be accompanied by social and economic rights; political rights alone will not bring about human contentment. To this end our great wealth and general advantages, especially our educational system, must contribute toward the instruction of all in the best means of giving people their just dues.

And what better immediate means can be had for a true understanding of social and economic rights than the mooted all-American conference on industrial justice?

Andrew Furuseth, President of the International Seamen's Union of America, is back on the Pacific Coast after an extended journey to various countries in Europe. The two preceding issues of the JOURNAL contained details of Furuseth's mission to Europe. His concluding report will appear in next week's issue. This evening, Wednesday, May 21, Furuseth will be the principal speaker at a mass meeting of seamen to be held in Maritime Hall, 59 Clay street, San Francisco. All seamen in port, including licensed officers, who can show a membership certificate in their respective union or association are welcome to the meeting. All who have heard Furuseth know that he is an interesting and instructive talker. So don't miss this opportunity to get some real, first-hand information from Europe and authentic facts regarding the condition of seamen generally.

Annexed to the 1918 report of the Chamber of Shipping of the United Kingdom are diagrams showing net gains or losses of steam tonnage of the World's Merchant Shipping (excluding enemy tonnage), from which it appears that only the United States, Japan and Brazil increased their shipping during the war, the increases being respectively as follows: United States (excluding Lake tonnage), 3,046,884 tons gross; Japan, 331,408; Brazil, 20,638. Decreases were as follows: United Kingdom and Colonies, 3,663,770; Greece, 561,687; Norway, 542,426; Holland, 441,573; Italy, 440,900; France, 385,556; Spain, 212,501; Sweden, 204,875; Denmark, 157,490; Belgium, 151,062.

WHEN HALF WAGES ARE DUE.

Circuit Court of Appeals Rules on Question of Time When Half Wages Are Due to Seamen.

Editor, Seamen's Journal:

I forward herewith copy of the decision in the case of Lucas vs. Westmeath. This case was taken up soon after the Seamen's Act went into effect. The International Seamen's Union financed the defense of the case in the Circuit Court of Appeals.

I am inclosing also copy of decision in the case of Janssons vs. Italier which the Circuit Court of Appeals decided at the same time. You will note that the dicta in this decision by Judge Hough is to the effect that the vessel must be in port five days before the demand for half wages can be lawfully made. This is in direct conflict with the decision by Judge Shepard in the Dillon vs. Strathearn case which was the first case appealed on behalf of the International Seamen's Union of America, but the Circuit Court of Appeals, Fifth Circuit, reversed Judge Shepard. So it would seem that if the District Courts followed the Circuit Courts in its dicta, in the future, and the Circuit Court of Appeals in this Circuit sustains them, in accordance with the dicta, there will be a disagreement between the Circuit Courts of Appeals that will take the Seamen's Act again to the Supreme Court of the United States for interpretation on the "five day clause."

This particular decision again exhibits the inclination on the part of the court to curb and limit the application of the Seamen's Act. The question was not raised by the Counsel for the ship but the Court was not loath to raise the point as the same Court found the law in the "Chelentis" case when Counsel had not urged it.

Yours very truly,
S. B. Axtell.

New York, May 1, 1919.

United States Circuit Court of Appeals, For the Second Circuit.

Before: Hon. Henry Galbraith Ward, Hon. Charles Merrill Hough, Hon. Martin T. Manton. Circuit Judges.

Constant Janssons, et al., Libelants-Appellees, against S. S. "Italier," her engines, etc., Vital Delgoffe, Claimant-Appellant.

Appeal from decree in Admiralty entered in the District Court for the Eastern District of New York.

This action was brought by eleven seamen and firemen on the Belgian Steamship "Italier," to recover wages and damages for waiting time under R. S. 4529 and 4530 as amended by the Seamen's Act of March 4, 1915.

Libelants had shipped on this Belgian vessel at English and Italian ports for a voyage which had not expired when the "Italier" put into New York on October 6, 1916. On October 10 six of the libelants caused to be served on the master a written notice as follows:

"I hereby demand one-half my wages earned in accordance with Section 4530 of the United States Revised Statutes."

This notice was dated October 9, but not served until the following day, for reasons which appear immaterial.

Prior to the service of this paper all the libelants who testified, had either left the ship or formed the intention of so doing and had ceased to work. Some said they went back at night and to sleep. One man who did not sign the written notice remained aboard until the 10th, when he disappeared without making any proven demand under the statute.

Janssens petitioned for an order allowing proceedings in forma pauperis on October 10 and on the same day the libel herein was filed stating that he "together with the other members of the crew who wished to be joined as co-libelants in this action" made demand under Section 4530. The verification of the libel, then enumerates the names of the eleven libelants.

The record contains no evidence that New York was a port where the "Italier" either loaded or delivered cargo.

The court below gave a decree in favor of some of the libelants (without making any explanation as to why all should not recover if any did, and directed that in computing the amounts due "the advance notes advanced to the libelants and England should not be regarded as a credit to the ship." Claimant appeals.

1. de Grove Potter for claimant-appellant;
L. C. Boehm for libelants-appellees.

Hough, C. J.

(1). The "Italier" is a foreign vessel, and libelants shipped elsewhere than in the United States. Therefore under The Talus 248 F. R., 670 (aff'd. S. C. U. S., Dec. 23, 1918) the court erred in directing that no credit should be given to the ship in respect of advances made to the libelants beyond the boundaries of the United States.

(2). It seems to be thought (judging from the tenor of argument in this and similar causes) that the Seamen's Act of 1915 has

(Continued on Page 9.)

Definite announcement as to the future of the Foundation Company shipyard in Tacoma and Portland is expected when Frank Walker, representative of the French Government, will return from the East. Bayly Hipkins, vice-president and Pacific Coast manager for the Foundation Company, professes to know nothing of the future plans. Last December the Foundation Company announced that 74 steel ships would be built at the two yards for the French Government, at a contract price of $200,000,000, if the United States would remove restriction on foreign building. Later it was said that the Foundation Company would build a shipyard at Cestte, France, but advices from New York say that work there has been discontinued. Franklin Remington, president of the Foundation Company, has been in France for several months. It was planned to change the Tacoma yards from wood to steel construction with ten ways.

Ed Christensen, who went to London to adjust the legal difficulties involved in receiving an award for damages from the British Government for the seizure of the steamship "Edna," formerly the "Mazatlan," is responsible for placing with the United Kingdom the largest Pacific Coast lumber and railway tie order ever closed. As a result of his activity, Chrstensen, Hanify and Weatherwax are reported to have chartered twenty-one wooden steamers to be loaded with California redwood lumber, ties and other lumber from other Pacific Coast points. All of the cargoes are to be loaded and dispatched within the next few months.

OUR WASHINGTON LETTER.

(By Laurence Todd.)

Endorsement of the Labor Party by the convention of the American Federation of Labor at Atlantic City next month is now counted not merely a possibility, but a probabilitly, by some of the men best informed on the drift of labor opinion.

Here is the way they figure it:

While there is a big element in the Federation which is still opposed to the launching of an independent trade-union political movement in each of the States there is a much bigger element that is opposed to the strike method of securing political ends. The Mooney sympathetic strike is a case in point. If the convention turns down the resolution which will be offered there, advising the internationals to have their membership vote upon the question of calling a general sympathetic strike for securing new trials or the release of Mooney and Billings, one of the chief reasons urged against the strike will be that labor should take legal and political means to secure permanent control of the courts, not merely in California but in the whole country. The element in the labor movement which is determined that labor prisoners shall no longer be sent to jail as the result of every industrial battle, will wait for one answer or the other, and the majority in the convention will decide that a Labor Party is more effective and constructive than a political strike.

This prediction may go wrong. It may be that the whole political movement will be rejected, despite its endorsement by organized labor in Illinois, Minnesota, Connecticut and other States. New faith in the Democratic administration, in spite of Burleson's presence in the cabinet and in spite of the fate of Ireland at the Peace Conference, may be voted. But just now the signs point otherwise.

This Mooney strike issue has raised a sharp dispute in many of the international unions. While most of the officers as well as the rank and file believe Mooney and Billings should have a new and fair trial, international officers generally are opposed to the calling of protest strikes. They believe any such strikes will be a fizzle and will weaken the power of the movement to resist attack by the organized employers who may try to break down the standard of wages and hours that has been established during the past two years. Besides, most of them are promising to get still shorter hours for their membership, and they want to center their shots on that target. Sympathy is their donation to the men in prison in California, until the industrial situation is more settled.

The International Workers' Defense League, of which Ed. D. Nolan, of San Francisco, is Secretary-Treasurer, has begun sending out the 4,000,000 ballots with which the members of all local unions of all labor organizations are being asked to take a strike vote on May 20th. The strike is to begin July 4, and last five days, and then is to be renewed for five days on September 1, and again on November 19 for five days. This action—sending the strike ballots direct to the locals—is resented by international officers, who say that it is a violation of the law of the movement to take a referendum vote through any but the international executive office.

The Defense League, in a circular issued under the title "The Right to Strike For Liberty," says: "The right to strike to preserve the principles of democracy is the right of all citizens, and therefore can not be abridged or denied by any form of government, whether it be the civil government, instituted by the people, or the government of labor organizations, built by the toilers themselves. The Mooney case serves as a terrible example of how far the abuse of power and influence can be carried. If the injustices exposed in this case are not speedily corrected by the people as a whole, then the very foundation of civil liberty is threatened with destruction. Mooney is only a symbol of the whole people in this case, and all constitutional rights have been trampled under foot by powerful industrial corporations acting in concert with corrupt powers of government.

"The right to strike to preserve liberty and democracy is more valuable than the right to strike for bread, and no institution has control over this right except the people themselves who must suffer in the loss of the great principles."

To this circular and to another dated March 20 an answer was drafted by the Executive Board of the International Association of Machinists, and sent as a circular to the 1300 locals of that union, declaring that since the Defense League has sent out notice that unless the internationals generally submit a general strike vote to their members by April 10, the Defense League will send the strike ballots to the local direct.

"Without in any way entering into the merits or demerits of the case involved," says the official circular of the Machinists, "it is necessary to call attention of our local lodges to the fact that the International Workers' Defense League has no authority and can usurp no power within the International Association of Machinists that would mean the setting aside of its laws. Under our constitution it is specifically stated as to how strike ballots shall be taken. It is also specificaly stated as to how the strike is to be put into operation, and in no case will a strike be sanctioned unless approved by the general executive board. Local lodges will, therefore, pay no attention whatever to a ballot being circulated for this purpose returnable to the Defense League."

The circular further declares that "up until April 10 there had been received at our headquarters twenty-three endorsements asking that the referendum be circulated in our organization," and pointing out that forty such endorsements are required before a referendum can be legally considered. Yet the executive board waived this point, took up the question, and voted on whether the referendum should go out. The board voted against a referendum.

This action by the international officers of the Machinists will not prevent the discussion of the Mooney strike proposition on the floor of any local, but it does seriously cripple the efforts of the Defense League to call a strike, for the Machinists are credited with being as liberal as any of the big internationals.

American Federation of Labor politics is seething, nowadays, and the various members of the Executive Council, meeting next week in New York in order to consult with President Gompers, are trying to count the vote by which they will be retained in office at the June convention. O'Connell and Perham were eliminated at St. Paul last summer. There have been rumors that a fight would be made this year on another of the veterans —John Alpine, of the Plumbers. John B. Lennon was replaced by Tobin at the Buffalo convention.

Indianapolis is the center of political activity at present. The big votes are centered there in the Carpenters, the United Mine Workers, the Typographical Union, and a few other organizatons having headquarters in the Indiana capital. If the Carpenters, Miners, Teamsters, Machinists and their allies of the past two conventions get together again this year, the results may be interesting. But there is at present no proof that any combination has been found.

There is now under discussion among the so-called progressives in Congress a proposition made by Senator Kenyon of Iowa that the Republican majority should formulate a broad industrial program, in line with the demands of organized labor, as a protection against radicalism in this country. The recent success of the British cabinet in averting the strike threatened by the Triple Industrial Alliance, by creating an industrial parliament to consist of equal numbers of employers and trade-union spokesmen, to advise the Government on all industrial legislation and industrial policies, has attracted their notice. They want to solve the strike "problem" here, and if an industrial parliament will solve it then they may vote in Congress to establish an industrial parliament of the United States.

That is a big change from the days when the United States was hostile to trade-union recognition—a startling contrast to the situation in the steel districts of Pennsylvania to-day. Yet the Congress which is about to meet is so worried over the growing power of the labor movement that it may decide to do at least one sensible thing, by creating a permanent joint council of labor and capital for the responsible discussion of labor issues. Whether any such action is taken will depend, of course, upon the stand which the convention at Atlantic City may take on the matter.

Western delegates at Atlantic City will report on the close co-operation that has been established between the labor movement and the National Nonpartisan League. This farmers' organization, having a two-thirds majority in each branch of the North Dakota Legislature, has not only passed the laws in the economic program of the farmers, but has enacted nine labor laws, each a model of its kind. Just now five of the farmers' chief measures hitting at the profiteers are threatened by a hostile referendum. Labor is suppirting these laws.

There are 175,000,000 cells in the lungs, and, spread out, they would cover a surface thirty times greater than the human body.

Demand the union label.

WHEN HALF WAGES ARE DUE.

(Continued from Page 7.)

abolished the offense of desertion in the mercantile marine.

While it is true that arrest for desertion, the bodily return of a deserter to his ship, and generally the holding of a seaman to his shipping contract by physical force are things of the past, even in respect of foreign vessels so far as the United States is concerned, (Sections 16-18) desertion is still an offense on American vessels entailing (inter alia) forfeiture of "all or any part of the wages or emoluments which the (deserter) has then earned." (R. S. 4596 as amended).

"Desertion" is not defined by an act of Congress. Quite possibly the definition of desertion varies in different countries. This record does not inform us whether Belgium defines desertion in any special way. Although the Belgian law would control if proven (The Nigretia, 255 F. R., 56), we may in the absence of such evidence, apply the general maritime law.

The definition of desertion "in the sense of the maritime law" is settled and consists in "a quitting of the ship and her service not only without leave and against the duty of the party, but with an intent not again to return to the ship's duty." (Cloutman vs. Tunison), 1 Sumn., 373; F. C. 2907, where the subsequent cases are collated).

Within this definition we have no doubt on the evidence that all the libelants who made demand for half wages, deserted before the presentation of such demand.

(3). It seems also to be thought that the demand for half wages under R. S. 4530 as amended is a ceremony of no moment and may be made (as it was made in this case) after the seaman leaves his ship (in Judge Story's phrase) animo dereliquendi.

Such is not the case. The seaman's is a lawful engagement, and its propriety is to be judged primarily by the law of the ship's flag. But Congress has plainly declared that when foreign vessels are in harbors of the United States R. S. 4530 as amended shall apply to seamen on such vessels. Therefore such seamen are entitled to one-half of the wages earned down to the time of demand made, and such demand must be made within the territorial jurisdiction of the United States, and at a port where said vessel "shall load or deliver cargo."

But no such demand can be made "before the expiration of nor oftener than once in five days."

As seamen on foreign vessels have no rights under this statute until they arrive within a harbor of the United States, it is we think evident that the five days' period begins to run upon arrival in such harbor; the intimation to the contrary in The Delagoa, 244 F. R., 835, is disapproved.

But since a deserter may forfeit all his wages, it is also a pre-requisite to recovery under the Statute that there should be wages due him when he makes demand and there are no wages due to a deserter.

(4). The decision below was therefore wholly erroneous in not finding that those libelants to whom awards were made had either deserted before demand made under the Statute, or had never made a demand pursuant to the Statute.

(5). The defense that there was no evidence that New York was for the "Italier" a port of either loading or discharging, and that on October 10 five days had not elapsed after arrival in the harbor, is not pleaded, but has been argued. Our view of the point therefore is stated rather for future guidance than as dispositive of the present cause.

Decree reversed and cause remanded, with directions to dismiss the libel.

United States Circuit Court of Appeals, for the Second Circuit.

Before: Hon. Henry Galbraith Ward, Hon. Charles Merrill Hough, Hon. Martin T. Manton; Circuit Judges.

Peter Lucas and Gustav Blixt, Libelants-appellees, vs. the steamship "Westmeath," her engines, etc.

J. M. Thompson, Claimant-appellant.

Appeal from decree in Admiralty entered in the District Court for the Eastern District of New York.

1. De Grove Potter for claimant-appellant;

Silas B. Axtell for libelants-appellees.

Hough, C. J.

The legal groundwork of this action is identical with that of the "Italier" (Opinion filed herewith).

At a port in Australia and in December, 1915, libelants shipped as members of the crew of the British steamer "Westmeath" for a voyage "not to exceed one year." Before that year expired the "Westmeath" arrived in the harbor of New York, where she loaded and discharged, and there the libelants aver they made demand for half wages under R. S. 4530 as amended. This demand was refused, whereupon this action was brought for full wages, etc.

The libelants had decree below, and as to the facts it is sufficient to say that the single defense (of desertion) set up in the answer is not proved. On the contrary we agree with the District Judge that libelants' case was proved within the statute.

To grant this decree in favor of foreign seamen against a foreign vessel solely because such vessel by coming into the harbor of New York and there loading and discharging gave to her crew rights entirely contravening those secured or granted to that crew by British law, —is now asserted to be such an interpretation of the Seamen's Act of March 4, 1915, as to render R. S. 4530 as amended unconstitutional.

That the statute impairs, or rather abrogated the foreign seamen's shipping contract is admitted; but we know of no reason why Congress if so minded may not pass such a statute. "It is no answer (to a plain congressional declaration) to say that it interferes with the validity of contracts for no provision of the Constitution prohibits Congress from doing this, as it does the States" (Mitchell vs. Clark, 110 U. S., at 643).

It is, however, urged that any interpretation of the act which enables a seaman on a foreign ship to accomplish that which is embodied in the decree appealed from,—is violative of the Fifth Amendment in that it interferes "with the liberty to contract on such terms as may be advisable to the parties to the contract," and is therefore "a deprivation of liberty without due process of law";—and for this reliance is placed upon Allgeyer vs. Louisiana, 165 U. S. 578.

In our opinion this very contention was in substance made in Patterson vs. The Eudora, 190 U. S., 169, and there disposed of; and this decision was recently approved in The Talus (S. C. U. S., Dec. 23, 1918).

The employment and discharge, treatment, status and punishment of merchant seamen has long been a part of the regulation of water-borne commerce. With the advisability or expediency of declaring all seamen, irrespective of nationality, to have a status, or be entitled to treatment when within a harbor of the United States totally differing from the treatment or status accorded them in every part of the world,—we have no concern;—but entertain no doubt of the power of Congress to enact this statute as a commercial regulation.

Decree affirmed with costs.

ALASKA FISHERMEN'S AGREEMENT.

(Continued from Page 2)

clean at the receiving station in the presence of the talleymen. Accurate account of all salmon discharged above limit to be kept by tallymen and such salmon shall be credited pro rata to all boats short of the limit, but in no event shall any boat be credited in excess of the limit except when detained as provided hereafter in this section. Any boat short of the limit is permittde to receive from any other boats sufficient salmon to fill the limit.

(c) Any boat detained from delivering salmon at receiving station for more than five (5) hours after having there reported arrival shall be credited with one hundred and fifty (150) red salmon for each hour's detention, but not more than twelve hundred (1200) salmon, in addition to all salmon delivered on such day, shall be allowed for twenty-four (24) hours' detention. The same rule to apply when boats are on the limit. Boats must have nets cleared before arrival at receiving station.

(d) Boat crew having swamped their boat through unavoidable accident shall assist in salvaging their own equipment, and also boat crew requiring repairs on their boat shall, if detained from fishing more than six (6) hours after time of having reported themselves at the cannery when in operation, be put to work until such time as a boat is provided, and for which work they shall be paid average or limit as the case may be, according to reading of section 12.

Sec. 14. (a) If any gill-net fisherman is prevented from fishing through some injury sustained through no fault of his own, he shall while so disabled, receive the average (or the limit when boats are on the limit) of the men fishing for the cannery to which he is assigned. Such injured man shall do other work if able to do so.

(b) Any other seaman, fisherman, beachman or trapman, who, from injury sustained while at work for the.....through no fault of his own is prevented from working, is to continue to receive his respective pay according to this agreement.

(c) Any seaman, fisherman, beachman or trapman laid up through sickness or natural ailments before end of fishing season shall be paid in addition to full run money or monthly wages, as the case may be, and all his other earnings. the sum of Fifty Dollars (50.00) per month from date so laid up until able to work, according to the judgment of the company's physician, or if found unable to resume work, until placed in hospital in San Francisco, Astoria or Seattle.

(d) It is hereby understood that the payment of such wages during time of disability does not release the.....from liability, if such liability exists.

(e) All parties of the second part while engaged under this contract shall receive medical and surgical attendance and medical and surgical necessities, free of charge.

Sec. 15. The crew of each fishing boat shall discharge its own fish.

Sec. 16. All salmon must be in perfect condition and not discolored on the outside when delivered and must be discharged from boats at least once in twenty-four (24) hours.

Sec. 17. (a) No person shall sell or give away any fish, except as provided in section 13, under penalty of forfeiting Twenty-five Dollars ($25.00) of his earnings for each offense.

(b) Each fisherman, beachman and trapman is to be permitted to salt one package (not to exceed one hundred pounds) of fish for his own use. Company to supply salt. All such packages to be plainly marked and to be subject to inspection and are not to be removed from vessel on arrival without permission from the.....

Section 18 (a) The ..... through its superintendent or agent in charge, may at any time discharge any party of the second part for refusal to perform tide work, or for any other just cause, and his wages shall cease at the date of such discharge.

(b) Any man who is discharged, or who quits, shall be paid only half run money and all his other earnings, including for date of discharge or quitting. If no substitutes are hired to take the places of quitting or discharged men, the run money so deducted shall be equally divided among all the men of the cannery signing under this contract.

(c) Men discharged shall be given free transportation to home port, including maintenance, but this obligation shall not apply to men quitting.

Sec. 19. All parties of the second part shall be given statement of Alaska account before vessel sails for home port.

Sec. 20. (a) Each party of the second part promises that no liquor shall be taken or sent on board vessel and agrees to allow his baggage and effects to be searched after arrival on board vessel, and in case any liquor is found in his possession he agrees to allow same to be confiscated without any question or claim.

(b) Every man guilty of drunkenness shall pay a fine to the.....of Five Dollars ($5.00) for the first offense and Ten Dollars ($10.00) for each subsequent offense, the

---

Labor's Economic Platform

Following is the Economic Platform adopted by the American Federation of Labor:

1. The abolition of all forms of involuntary servitude, except as a punishment for crime

2. Free schools, free text books and compulsory education.

3. Unrelenting protest against the issuance and abuse of injunction process in labor disputes.

4. A work day of not more than eight hours in the twenty-four hour day.

5. A strict recognition of not over eight hours per day on all Federal, State or municipal work, and not less than the prevailing per diem wage rate of the class of employment in the vicinity where the work is performed.

6. Release from employment one day in seven.

7. The abolition of the contract system on public work.

8. The municipal ownership of public utilities.

9. The abolition of the sweat-shop system.

10. Sanitary inspection of factory, workshop, mine and home.

11. Liability of employers for injury to body or loss of life.

12. The nationalization of telegraph and telephone.

13. The passage of anti-child labor laws in States where they do not exist and rigid defense of them where they have been enacted into law.

14. Woman suffrage co-equal with man-suffrage.

15. Suitable and plentiful playgrounds for children in all cities.

16. The Initiative and Referendum and the Imperative Mandate and Right of Recall.

17. Continued agitation for the public bath system in all cities.

18. Qualification in permits to build of all cities and towns, that there shall be bathrooms and bathroom attachments in all houses or compartments used for habitation.

19. We favor a system of finance whereby money shall be issued exclusively by the Government, with such regulations and restrictions as will protect it from manipulation by the banking interests for their own private gain.

proceeds of such fine to be devoted to the Library Fund of the Alaska Fishermen's Union, or to any charity, as may be directed by said Union.

(c) It is agreed there shall be no gambling.

Sec. 21. (a) In case of any assistance rendered to any vessel or property of the .....salvage shall be paid to parties of the second part therefor as follows: Any and all men engaged in repairing damages to hull or rigging caused by other vessels, while vessel assigned to is safely moored at its respective station, or who render assistance to vessels or property of any other party, shall each receive extra compensation at the rate of One Dollar ($1.00) per hour for all work so done. The same extra compensation shall be paid men engaged in taking cargo out of vessels stranded away from their regular station, and for actual time worked in floating and transferring such vessel to her regular assigned station.

(b) No salvage shall be paid for picking up boats, nets, lighters or bunk scows.

(c) It is hereby understood that making these payments does not release the company from liability if such liability exists.

Sec. 22. A copy of this agreement shall be placed in a conspicuous place on board ship and in the bunkhouse.

Sec. 23. It is expressly agreed that neither the superintendent in charge, nor any other agent of the.....has power or authority to change the provisions of this agreement.

Special Conditions

Red salmon in Nushagak and Egushik are 7c each, while at Naknek, Koggiung, Ugashik and Egegak the red salmon are 6½c each.

Special conditions and wages under Section 5 of the general agreement, noted as compensation, applies to the different parts of Central and Southeastern Alaska as follows:

Alitak

Each party of the second part (except those who ship on other specified wages as noted on the Articles), shall receive in addition to the wages of ONE HUNDRED AND EIGHTY DOLLARS ($180.00) for the run,—

ONE AND ONE-HALF CENTS (1½c) per case for all salmon packed at the (A) cannery of the Association at Alitak, Alaska, during the season of 1919, and THREE-QUARTERS OF ONE CENT (¾c) per case for all salmon caught by the Alitak fishermen and shipped away.

Karluk

Fishermen and Beachmen. (a) Each party of the second part (except those who ship on other specified wages as noted on the Articles), shall receive in addition to the wages of TWO HUNDRED AND FIFTY DOLLARS ($250.00) for the run,—

SIX DOLLARS AND FIFTY CENTS ($6.50) per one thousand cases for all salmon packed by the Association at Karluk, Alaska, during the season of 1919, and

THREE DOLLARS AND TWENTY-FIVE CENTS ($3.25) per one thousand cases for all salmon caught by the Association at Karluk and shipped away.

(b) Each complete fishing gang to consist of 17 men. If any gang is short of that number the percentage which would have been earned by such absent men during such time shall be equally divided among the men in the gang short of such men unless such percentages are paid to sick men remaining at the station, provided, however, that percentages which would have been earned by sick or other men sent from the station, (unless other men be substituted) shall be equally divided among the men in the gang short of such man or men.

(c) Watchmen and donkeymen shall not be counted as part of the fishing gangs.

(d) Any fishermen taken from the fishing grounds during the fishing season to perform other work such as loading or discharging cargo and handling other material, shall receive extra compensation for such work at the rate of FIFTY CENTS (50c) per hour per man. Extra money so earned shall be equally divided among all fishermen attached to the Karluk (Larsens Bay) cannery.

(e) Any fishermen sent from the cannery after piles shall receive extra compensation for such work at the rate of FOUR DOLLARS ($4.00) per day per man from the time of departure until return to the cannery or fishing beach. Extra money so earned to be equally divided between all the fishermen attached to the Karluk (Larsens Bay) cannery.

(f) The Association may exchange or divide salmon or may fish jointly with one or more companies at Karluk and the men will do all such joint work for fishing, provided, however, that the men shall not be required to handle gear for other companies.

Cooks Inlet

Each party of the second part (except those who ship on other specified wages as noted on the Articles), shall receive in addition to the wages of ONE HUNDRED AND EIGHTY DOLLARS ($180.00) for the run,—

ONE AND ONE HALF CENTS (1½c) per case for all salmon packed at the (CI) cannery of the Association at Cooks Inlet, Alaska, during the season of 1919, and THREE-QUARTERS OF ONE CENT (3/4c) per case for all salmon caught by the Cooks Inlet fisherment and shipped away.

Men signing under this agreement and employed at the cannery shall not be required to do other work than pewing salmon on Sundays during the fishing season, except in cases of emergency.

Men assigned to traps shall not be called to cannery while their respective traps continue in operation, except to pull web.

Working time and rules of Section 2 shall apply in the spring until one thousand (1,000) cases of salmon have been packed and in the fall after only two traps remain fishing.

During the fishing season men working ashore and around the cannery shall be given time back for time worked at night.

Hammer-man on each pile driver shall receive FIFTY DOLLARS ($50.00) extra compensation for the season.

Chignik.

Each party of the second part (except those who ship on other specified wages as noted on the Articles), shall receive in addition to the wages of ONE HUNDRED AND EIGHTY DOLLARS ($180.00) for the run,—

ONE AND ONE-HALF CENTS (1½c) per case for all salmon packed at the <C> cannery of the Association at Chignik, Alaska, during the season of 1919, and

THREE-QUARTERS OF ONE CENT (¾c) per case for all salmon caught by the Chignik fishermen and shipped away.

Fishermen, beachmen and trapmen hired in Alaska shall commence work with the arrival of the first sailing vessel and cease work with the departure of the last sailing vessel, and shall each receive in place of run money, the sum of NINETY DOLLARS ($90.00) in addition to all other earnings.

No less than eighteen men shall be employed on the traps during the fishing season.

Men signing under this agreement and employed at the cannery shall not be required to do other work than pewing salmon on Sundays during the fishing season, except in cases of emergency.

The Association may exchange or divide salmon or may fish jointly with one or more companies at Chignik and the men will do all such joint work for fishing, provided, however, that the men shall not be required to handle gear or work on traps for other companies.

Fort Wrangell.

FISHERMEN AND BEACHMEN SIGNING IN SAN FRANCISCO:

Each party of the second part (except those who ship on other specified wages as noted on the Articles), shall receive in addition to the wages of ONE HUNDRED AND EIGHTY DOLLARS ($180.00) for the run, as follows:

ONE CENT (1c) per case for all salmon packed at the <FW> cannery of the Association at Fort Wrangell, Alaska, during the season of 1919.

Any fishermen put to work cutting piles, shall receive extra compensation for such work at the rate of FOUR CENTS (4c) per running foot for all piles so delivered. Extra money so earned to be equally divided between all the fishermen and beachmen attached to the Fort Wrangell cannery.

Men not on monthly or season's wages sailing for Fort Wrangell on sailing vessel calling at Loring, shall be paid in addition to run money and other earnings, coasting rates and conditions from date of arrival at Loring until date of arrival at Fort Wrangell cannery.

Respectfully submitted,

I. N. HYLEN, Secretary,
Alaska Fishermen's Union, No.
49 Clay St., San Francisco.

In Holland a useful gum or paste is being made from garlic. The bulbs are pressed and the juice or fluid matter so obtained is thickened by inspissation. A good substitute for cork is obtained from certain fungi, which are dried and ground, mixed with cement and consolidated by pressure. In Norway a process has been patented to enable carbide to be used for driving motors. In Denmark a company has been floated to make briquettes from heather. These have a higher heat value than peat. Experiments are being made to use chalk marl, especially that which comes from the Limburg mines, as a manure.

WEEKLY NEWS LETTER.

(Continued from Page 3.)

competitors and had tied himself up with shipping arrangements that landed him in the bankruptcy court.

A fight against the union was then started and the financier's blunders were overlooked because he was "attempting to run his own business." He claimed the union destroyed his property in 1914. This was prior to the passage of the Clayton amendments to the Sherman Anti-Trust law.

Suit was started against the international organization of miners on the ground that it instigated the proceedings when its members refused to mine coal on a non-union basis, in competition with organized mines. Damages were also asked because of the alleged charge that a riotous crowd was led and directed by officers of the union

The union insisted that it disapproved violence and that it should not be held liable for the acts of members who are in a crowd of this character.

The decision opens the door for detectives who join a union and who instigate riots, as has been done times without number. In these cases an international trade union and its treasury is held responsible even though such strike is not called, financed or indorsed by the international and is merely a local district strike.

The decision will be appealed by the United Mine Workers of America.

American Tax Dodgers Flock to Porto Rico

American corporations are coming to Porto Rico to escape the United States income tax, declared Santiago Iglesias, American Federation of Labor organizer and member of the Porto Rican Senate, before a representative delegation of United States Congressmen who are investigating island conditions.

Iglesias showed that under the Porto Rican law these corporations will pay 50 and 76 per cent. less than they would have to in the United States, and that if the corporations were not permitted to escape this taxation, and were forced to pay their just dues into the island treasury, schools could be built.

The trade unionist stated that in the last five years progress in the schools has stopped.

"In five years we have lost in our schools 49,000 children," he said. "In 1904, when our imports and exports were $79,000,000, we sent 142,000 children to our schools. In 1916, when our imports and exports exceeded over $137,000,000, we had only 106,000 children in the schools, a loss of 48,000. What argument can defend a condition our country has increased its richness three times while we are losing in schools, in sanitation, in roads and in all those things that are needed by the people of Porto Rico? Absentee capitalists is the biggest thing we have to contend with in our economic problem.

"The paramount problem of Porto Rico is to raise the workers' standard of living. Political talk is only a question of sentiment and at this time nothing can be done with political talks—the first need of the island is constructive work among the masses."

AN UNUSUAL VERDICT.

EDITOR THE SEAMEN'S JOURNAL:

The SEAMEN'S JOURNAL has helped us in locating witnesses in the death action of Jackson v. International Mercantile Marine. This case was brought to trial before Justice Lehman and a jury in the Supreme Court, New York County, about three weeks ago.

One James O'Neill, a man 49 years of age, was killed by a defective ash bucket while working underneath No. 4 ash hoist on the steamship "Philadelphia." There were five witnesses, and they testified that there was an insufficient number of buckets on the ship, that there were no spare buckets, that they were bent, broken and had loose handles. The Company produced photographs showing that the buckets were in fine shape. But one of the photographs showed an ash hoist and a tube running from the 4 stoke hold to the upper deck, which was banged, battered and jammed from constant banging of the buckets against it. No guides or ropes had been provided, so as to keep the bucket from catching. The witnesses further testified that there was a protruding on the inside of these tubes, so that they frequently caught on the top of the bucket bringing great strain on the handles.

Nobody actually saw O'Neill, or Mulligan, as he was called on the ship, killed underneath. His body was found with his head buried in the ashes and the ash bucket full of ashes standing on top of it. One of the handles was gone when the bucket was found, according to plaintiff's witnesses, but this was denied by the two engineers called by the ship. Efforts of plaintiff's counsel to bring out before the jury the fact that the engineers were Englishmen, who held first papers and whose residences, families and all interests were in Liverpool, who had or never had had a bona fide residence in the United States, were defeated by the Court.

This scandalous condition on board American vessels has been known for many years. The firemen are Americans or naturalized Americans, who live in the United States for the most part, but the engineers are American in name only. They do not live in the United States, and never have lived here. Under the Income Tax affecting alien seamen, the Treasury Department has recently ruled that a residence of a seaman aboard ship is not a residence. It is difficult to see, therefore, how these men could ever have obtained their citizenship papers, as they apparently never had a residence in the United States.

The case went to the jury under a charge to the effect that the maritime law of the United States must apply. It was the duty of the shipowner to furnish seaworthy vessel and seaworthy appliances appurtenant to the ship. The attorneys for the Company, Burlingham, Veeder, Masten & Fearey, contended that their duty was simply to furnish the ship with good buckets, and that they had performed that duty, that if the officers of the ship had not used good buckets there was no liability.

The court held that it was a question of fact for the jury to determine whether or not the Company had furnished a good bucket for the use of O'Neill at the time and place in question. After a half hour's deliberation, they brought in a verdict for plaintiff in the sum of $3500. There was no surviving widow, and a married daughter, whom the deceased supported, was the beneficiary. Otherwise the verdict would have been much larger.

Very truly yours,

S. B. AXTELL.

New York City, May 7, 1919.

WHY HEALTH INSURANCE?

The tragedy of sickness to the wage earner has been vividly pictured by Warren H. Pillsbury, of the California Industrial Accident Commission, who urges compulsory health insurance as the only effective and economical method of coping with illness among workers, which is at present a costly burden to society.

"The present method of handling illness of wage earners," he says, "is as follows: The workman becoming ill, struggles to remain at work as long as possible to avoid loss of wages, and refuses to go to a physician until the last moment because of fear of expense, thus preventing treatment at the time it is most effective, the early stages of the illness. When finally obliged to leave work, the income of himself and his family is ended. His savings will seldom last for more than a week or two of idleness. He then becomes a charge upon relatives, friends and public charity. Worry over his financial condition prolongs his illness. Inability to procure necessary medical and surgical appliances or to take proper rest or sanatorium treatment delays recovery. The children are taken from school prematurely and put to work without adequate preparation or allowed to go upon the streets. Eventually he may go to the county hospital for a long period of time, and his wife will be taken care of by the Associated Charities, or will undertake work beyond her strength and in turn become ill. The employer has to break a new man into the work. The community, friends, or relatives have to support the family, and the man is inefficiently and haphazardly taken care of because of lack of organized social endeavor to meet the problem presented."

Mr. Pillsbury concludes that "the doctrines of the old individualistic school must be modified in favor of a greater social cooperation, including necessarily compulsory insurance" against the hazard of illness.

The issue of public ownership is thrown into a clearer light by the presence at the head of a great Government department of a man like Postmaster General Burleson. Mr. Burleson is a narrow-minded man, a class-biased man, a typical bureaucrat, ignorant of the social questions of the day and totally lacking in sympathy with modern popular movements. Such a man at the head of our postal service, our telegraph and telephone service—bearing in mind that he is simply an irresponsible cabinet official, not answerable directly to the people—makes it sharply plain that public ownership must be democratic. Government ownership must fail in the larger sense unless it carries with it actual control by the people. And that control must in great part be represented by direct control on the part of the workers in each branch of industry.—Ex.

Labor News

Nine important labor measures were passed by the Arkansas Legislature which has just closed its session.

Long hours, low wages, and poor working conditions have awakened drug clerks in Detroit, Mich., to the necessity for trade union methods and they have organized.

The collective bargaining principle, allowing the employes themselves to have a voice in the reclassification of salaries in the Federal Civil Service, has been recognized by the Joint Congressional Committee on Reclassification.

After an eleven-week strike the International Ladies' Garment Workers have won the 44-hour week, a substantial increase in wages, and the right of union representatives to observe union working conditions. About 35,000 workers were involved.

Great improvement in unemployment conditions is shown in the Government reports for last week. No city in the country shows an increase in the number of unemployed persons, and an average decrease of 25 per cent. on the whole is reported.

The Labor Bureau of the League to Enforce Peace, in a report just made public, declared that organized labor overwhelmingly favors the entrance of the United States into the League of Nations. The evidence in the possession of the League includes resolutions or letters from international and national labor unions with a membership of more than 2,500,000 and representing every important industry.

Iowa, which has just enfranchised its women, is the twenty-ninth State in the Union to confer Presidential suffrage on women—fifteen of these are full suffrage States and two are primary suffrage States. It is the twelfth State in which the right to vote for President has been bestowed by legislative grant. The number of women twenty-one years of age and over affected by the legislative grants during the last three months is 4,350,000.

A new charter every other day under the American Federation of Teachers is the rate at which the organization wave among public school teachers of the United States has been spreading during the past month, according to reports received at the Washington office of the National Women's Trade Union League. The aims of this vigorous young national trade union organization of educators are democratization of the schools and fair working conditions for teachers.

Information reaching the training service, Department of Labor, from establishments where factory training systems are in operation indicates that foremen, after brief experience with the training system, insist upon having trained workers in their departments, for the reason that they do much more efficient work than those who are put into the factory on production work at the start. Many workmen also ask for training, in order to increase their earning capacity, and so valuable has training proved for peace time that last week seventeen factories adopted training systems, a number almost equal to the average installation of training departments during the war.

The Public
A Journal of Democracy

Poverty is A Crime!

IT isn't a crime to be poor, any more than it is to be murdered. The poverty-stricken man is not a criminal. He is a victim of a crime for which others as well as himself are responsible. Henry George 33 years ago gave a lecture before the Knights of Labor the title of which was

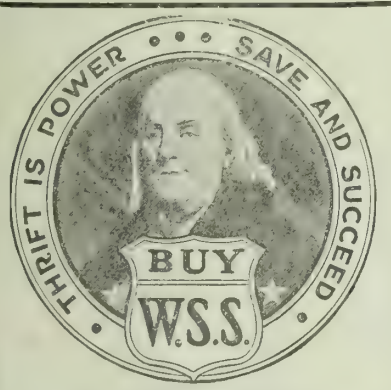
"The Crime of Poverty"

It has since become a classic and has touched the spark of ambition in the hearts of thousands of men and inspired them to better things.
You can get a copy of this gripping lecture, well printed in a neat, cloth-bound book, and THE PUBLIC, A Journal of Democracy, for 13 weeks for only 65 cents. Let THE PUBLIC be your interpreter, as it is for many of the great liberal thinkers of the day: Brand Whitlock, U. S. Minister to Belgium; Wm. C. Colver, Federal Trade Commissioner; Ray Standard Baker, and hundreds of others.

Frank P. Walsh, Joint-Chairman of the National War Labor Board says:
Every worker in America should be a subscriber to THE PUBLIC. All lovers of justice are striving toward the same end. THE PUBLIC points the way.

Write your name and address clearly on the margin, attach 65 cents, stamps or money order, and with the first number of THE PUBLIC we will send you a cloth-bound and handsomely printed copy of "The Crime of Poverty."

THE PUBLIC
122 E. 37th St., New York City



DO YOU KNOW

That War-Savings Stamps pay 4 per cent. compound interest?

That W. S. S. cost $4.12 in January and one cent more each succeeding month of the year, reaching their highest price, $4.23, in December?

That the 1919 W. S. S., known as the Franklin Issue, will be redeemed by the Government on January 1, 1924, for five dollars?

That the 1918 W. S. S. will be redeemed by the Government on January 1, 1923, for five dollars?

That W. S. S. of either issue, if necessary, may be redeemed for value to date, as indicated on the W. S. S. Certificate, at any post office upon ten days' notice?

That one thousand dollars' worth of W. S. S. is the maximum amount allowed to any one purchaser?

That Thrift Stamps cost twenty-five cents? And that sixteen Thrift Stamps are exchangeable for an interest-bearing War-Savings Stamp?

INFORMATION WANTED.

Relatives of Axel Hansen, the seaman for whose murder Capt. Pedersen, or "Hell-Fire Pedersen" of the bark "Puako," is to be tried May 15, at New York City, please communicate with the undersigned. Any seaman knowing aught of Hansen or his relatives, please write. The names and addresses of one or two witnesses who have known for some time past Capt. Pedersen's reputation, the way he is reputed to have handled his men on board ship, are also desired to communicate with the undersigned. Silas B. Axtell, 1 Broadway, New York City.

You Want the Truth

This year there will be stirring times in the Nation. Under government censorship it is increasingly difficult for the average man to get the real meaning of the social and political movements of the day.

LA FOLLETTE'S MAGAZINE

will be specially represented at Washington and will analyze and present the news from the capital truthfully and fairly. Senator La Follette is making a real fight to lift some of the tax burdens from the common people and place them where they belong — on excess profits, war profits and surplus fortunes and incomes. Because of this he is being attacked more bitterly than any other man in public life.

Send in your order today.

$1.00 Per Year—Agents Wanted

INFORMATION WANTED.

One B. Kajakcorchi, oiler, of Russian nativity and member of Seamen's Union, was injured on the steamer "Paraiso," of Swayne & Hoyt, San Francisco. The vessel was one day out of New York and on the second watch the strap on the go ahead starboard eccentric broke, with the result that Kajakcorchi had his left hand smashed all to pieces. He has been in the hospital ever since and will be disabled for many months. He has a permanent disability. Patrick Ennis and Andrew McCann, who know about the previous condition of this strap, will oblige me by communicating with me or the nearest Union delegate. This strap, we have reason to believe, was worn out and defective, as it had been heating up continuously for nearly three weeks prior to the accident. Silas B. Axtell, Esq., 1 Broadway, New York City. 8-21-18

The following men: August Rosso, oiler; Robert Anser, oiler, and V. Florio, wiper, who were employed on the S. S. "Comet," on or about November 22nd, 1917, when John Olsen was injured through the leaking of a gland which caused his hand to get tangled up in the motor, whereby he sustained severe and permanent injuries, will please communicate with me without delay. They may furnish valuable evidence to assist Olsen in his suit against the Standard Transportation Company. His injuries are very serious. S. B. Axtell, 1 Broadway, New York City.

Members of the crew of the SS. "Gulf of Mexico" may obtain money due them for salvage services rendered to the bark "Portugal" by communicating with Silas B. Axtell, Attorney for Seamen's Unions, 1 Broadway, Room J, New York City. 10-16-18

Members of the S. S. "J. O. Neil" will please call or write to the undersigned attorney relative to salvage services performed on the 18th day of January, 1919, to the S. S. "Oregon." Silas B. Axtell, 1 Broadway, New York, N. Y. 4-21-19

Members of the crew of the S. S. "Oskawa" will please call at my office in relation to a claim for salvage against the S. S. "Westgrove." Silas B. Axtell, 1 Broadway, New York, N. Y. 4-21-19

Anyone knowing the whereabouts of Daniel Shean, last heard from at Cleveland, will kindly communicate with his brother, Richard Shean, 7014 Cedar Ave., Cleveland, Ohio. 11-6-18

When making purchases from our advertisers, always mention The Seamen's Journal.

For the benefit of the widow of John Karus, lost at sea, October 17, 1918, at 2:15 a. m., according to the report in the official log of the barkentine "Aurora," will all members of the crew of that vessel who know anything about the ship, the condition of her rigging, before and after the accident, or anything that will tend to explain his disappearance, communicate with the undersigned attorney for the widow?—Silas Blake Axtell, No. 1 Broadway, New York City. 1-1-19

Members of the crew of the SS. "Kellogg" who were on board when she picked up the SS. "Catania" can obtain money due them for salvage services by communicating with Silas B. Axtell, Attorney for Seamen's Unions, 1 Broadway, Room J, New York City. 10-16-18

The salvage case of S. S. "Princeton" which salvaged the S. S. "Ardmore," both vessels owned by Standard Oil Company of New Jersey, has been tried and resulted in an award of $7,500 to the crew. This amount has been received, and members of the crew of S. S. "Princeton" are requested to call for same at the offices of Mr. Axtell, One Broadway, New York, N. Y.

Members of the crew of the S. S. "Fred W. Whellen" who were on board November 11, 1918, when she picked up the bark "Galica" should file their claims with this office and be joined in libel which is being filed by the undersigned on behalf of the members of the crew. Silas B. Axtell, 1 Broadway, New York City. 12-25-18

Anyone knowing the whereabouts of Woodley Ransome and Charles Bland, who were members of the tug "Virginian" when she was damaged by the "Navy Tug No. 4," will kindly communicate with Arthur Jones, Agent, Marine Firemen's, Oilers' and Watertenders' Union, 513 Main St., Norfolk, Va. 11-6-18

Charles L. Carlsen, No. 1834, who disappeared from the barge "Isaac Reed" at Eureka, California, on December 31, 1918, is inquired for by his wife, Mrs. C. L. Carlsen, 107 Courtland Ave., San Francisco, Cal. 2-5-19

Members of the crew of the S. S. "Argonaut," who assisted in the salvage services to the S. S. "Jason," at the time she was in distress off the coast of Florida, on or about January 1st, 1918, will kindly call or communicate with the undersigned who is representing most of the officers and crew of the S. S. "Argonaut." Silas B. Axtell, One Broadway, New York City.

Carl Hansen, a native of Soon Norway, age 35, formerly a member of the Lake Seamen's Union, is inquired for by his mother, Marn Hansen, 778 Sixth Ave., Milwaukee, Wis. 8-17-18

Home News

The report of the Midvale Steel and Ordnance Company for the year ended December 31, 1918, shows net earnings after taxes of $71,129,012, compared with $57,942,941 in 1917.

By a plurality of 1,061 votes, the Democrats of Peekskill, N. Y., elected a woman village treasurer over a man Republican opponent. The women's votes at the village election total more than one-half of the 5,000 votes cast.

The night court for women in New York, established as a separate tribunal in 1910, was officially abolished on the 20th. It was supplanted by the Women's Day Court. The night sessions had attracted undesirable elements and curiosity seekers.

The first woman to be appointed a member of the faculty of Harvard University is Dr. Alice Hamilton of Chicago, who has just been named as' assistant professor of industrial medicine in the Medical School at Harvard. Dr. Hamilton is a graduate of the University of Michigan.

The influenza epidemic last year cost the Prudential Insurance Company $14,000,000 in payments on the deaths of 63,000 policyholders between September 26 and December 31, the company announced at its home offices in Newark. During 1918 payments were made on more than 250,000 deaths, and total more than $71,000,000, which is $20,000,000 greater than any previous year.

Sixteen thousand eight hundred and eleven cities, towns, and villages in the United States have taken part in the weighing and measuring tests of Children's Year, according to figures made public on the 4th by the Children's Bureau of the U. S. Department of Labor, which, with the local child welfare committees of the Council of National Defense, instituted the Children's Year program.

There have been 3216 lynchings, exclusive of the East St. Louis and other mob riots, in the United States in the last thirty years, 702 of which have been lynchings of white people and 2514 lynchings of Negroes. Sixty-three Negroes and four white persons were lynched in 1918. Some of the recent lynchings have been particularly atrocious, involving burning at the stake and torture of the victims.

The Great Adventure group of Singletax workers in California have invited William L. Ross of Philadelphia to assume direction of their activities. A number of Philadelphia members of the organization have issued a statement saying that Mr. Ross is prepared to give up his business and the income from it, move to Los Angeles, and devote his entire time to the work, asking only that his living expenses be paid.

Viscount William Waldorf Astor, born an American and naturalized in England, is said to pay more money for income tax than the total of his income. His property is in the United States and is taxed by both the American and British Governments. His American holdings are valued at more than $80,000,000, with an estimated income of $4,000,000. The New York taxes are $1,600,000; the Federal income tax, with surtaxes, $1,200,000, and the British income tax $1,600,000—a total about $400,000 more than the income.

Labor News

Nine important labor measures were passed by the Arkansas Legislature which has just closed its session.

Long hours, low wages, and poor working conditions have awakened drug clerks in Detroit, Mich., to the necessity for trade union methods and they have organized.

The collective bargaining principle, allowing the employes themselves to have a voice in the reclassification of salaries in the Federal Civil Service, has been recognized by the Joint Congressional Committee on Reclassification.

After an eleven-week strike the International Ladies' Garment Workers have won the 44-hour week, a substantial increase in wages, and the right of union representatives to observe union working conditions. About 35,000 workers were involved.

Great improvement in unemployment conditions is shown in the Government reports for last week. No city in the country shows an increase in the number of unemployed persons, and an average decrease of 25 per cent. on the whole is reported.

The Labor Bureau of the League to Enforce Peace, in a report just made public, declared that organized labor overwhelmingly favors the entrance of the United States into the League of Nations. The evidence in the possession of the League includes resolutions or letters from international and national labor unions with a membership of more than 2,500,000 and representing every important industry.

Iowa, which has just enfranchised its women, is the twenty-ninth State in the Union to confer Presidential suffrage on women—fifteen of these are full suffrage States and two are primary suffrage States. It is the twelfth State in which the right to vote for President has been bestowed by legislative grant. The number of women twenty-one years of age and over affected by the legislative grants during the last three months is 4,350,000.

A new charter every other day under the American Federation of Teachers is the rate at which the organization wave among public school teachers of the United States has been spreading during the past month, according to reports received at the Washington office of the National Women's Trade Union League. The aims of this vigorous young national trade union organization of educators are democratization of the schools and fair working conditions for teachers.

Information reaching the training service, Department of Labor, from establishments where factory training systems are in operation indicates that foremen, after brief experience with the training system, insist upon having trained workers in their departments, for the reason that they do much more efficient work than those who are put into the factory on production work at the start. Many workmen also ask for training, in order to increase their earning capacity, and so valuable has training proved for peace time that last week seventeen factories adopted training systems, a number almost equal to the average installation of training departments during the war.
